The thirty-seventh annual championship regatta of the National Association of Amateur Oarsmen was held on the Detroit River, August 6-7. The principal events and winners were: Senior international fours, New York A. C.; senior double sculls, Harlem R. C.; championship senior sculls, J. W. O'Neil, St. Mary's A. A. and A. Club, Halifax, N. S.; senior eight-oars, New York A. C.; senior four-oars, Ottawa R. C., Ottawa, Ont.

The seventh annual regatta of the National Rowing Association, commonly called the American Henley, took place on the Schuylkill River on May 22 over a course 1 mile 550 yards long. There were a large number of contestants and four new records were made. The winners of some of the more important events and the time made by each were: First four-oared shells, Arundel B. C., Baltimore, 7 minutes 5 $\frac{1}{2}$ seconds (new record); Intercollegiate race, Cornell, 6 minutes 26 $\frac{1}{2}$ seconds (new record); first single sculls, Durando Miller, New York A. C., 8 minutes 4 $\frac{1}{2}$ seconds (new record); first eight-oared

shells, Harvard (junior eight), 6 minutes 36 $\frac{1}{2}$ seconds; second eight-oared shells, University of Pennsylvania freshmen, 6 minutes 42 $\frac{1}{2}$ seconds; first double sculls, Harlem R. C., N. Y., 7 minutes 14 seconds (new record).

A feature of the Hudson-Fulton celebration, held in New York, was the fifth contest for the Battenberg Cup, which was presented to the enlisted men of the American Atlantic fleet by the enlisted men of the British cruisers *Drake*, *Cornwall*, *Berwick*, *Essex*, *Bedford* and *Cumberland*, comprising the squadron commanded by Rear-Admiral Prince Louis of Battenberg, which visited the United States in 1905. Three crews entered the 1909 contest—U. S. S. *Louisiana*, U. S. S. *Minnesota* and the British cruiser *Drake*. The victory went to the *Minnesota* crew of 12 men, which defeated the *Louisiana* crew over the three-mile course by half a length, the *Drake* tars being nine lengths behind.

The Royal Club Nautique de Gand, Belgium, won the Grand Challenge Cup at the Henley Regatta in England by defeating Jesus College, Cambridge, by 1 length. Other events of the regatta and their winners were: Diamond Challenge Sculls, A. A. Stuart, Kingston R. C.; Thames Challenge Cup, Wadham College, Oxford; Silver Goblets, Leander Club, and Visitor's Challenge Cup, Christ Church, Oxford.

The sixty-sixth annual Oxford-Cambridge regatta was won by Oxford for the first time in four years, the winner's time being 19 minutes 50 seconds.

ROZHDESTVENSKY, ZINIVY PETROVITCH. A Russian admiral, died January 14, 1909. He was born in 1848. He served with merit in the Russo-Turkish war of 1877-8, and subsequently acted as adviser to the Bulgarian government in connection with the reorganization of fleet. After several commands he served as naval attaché at London. He was head of the General Staff in 1904, when war broke out with Japan, and was given command of the fleet, hastily got together, which was ordered to Japanese waters to raise, if possible, the siege of Port Arthur, then beleaguered by the Japanese. While en route, on October 21, vessels of his fleet fired into the Hull fishing fleet, in the North Sea, sinking two boats and killing several fishermen. In spite of this mishap, which was ascribed to panic and lack of discipline on the Russian vessels, the fact that Rozhestvensky brought his heterogeneous and ill-manned fleet intact to its goal, proves him to have been a good seaman and disciplinarian. In the battle of the Sea of Japan which followed he was so outnumbered and outmanœuvred by the Japanese that the outcome was never in doubt. Rozhestvensky himself showed great bravery. He was severely wounded in the head and was taken off his vessel by the Japanese. Following his recovery and release he was tried by court martial in 1906 for inefficiency, although he voluntarily assumed the entire responsibility for the disaster.

RUBBER. In 1909 the total imports of india-rubber, gutta-percha, and substitutes therefor into the United States amounted in value to \$83,682,013, as compared with \$46,455,689 in 1908. There were imported in 1909 93,969,114 pounds of india-rubber, valued at \$79,264,817, as compared with 76,289,474 pounds, valued at \$44,096,526 in 1908. Brazil furnished the greatest amount, supplying 44,219,868

pounds, as compared with 38,028,444 in 1908. Mexico followed with 19,604,810 pounds, as against 11,657,245 in 1908, while the United Kingdom supplied 12,114,339 pounds in 1909, as compared with 11,805,484 in 1908. In 1909 there were imported 803,569 pounds of balata, valued at \$385,625, 742,868 pounds of gutta-percha, valued at \$155,040, and 36,817,929 pounds of joolatong, valued at \$1,420,220. The manufactures of india-rubber imported into the United States in 1909 were valued at \$1,390,684, as compared with \$1,509,629 in 1908, and those of gutta-percha amounted to \$71,857, as compared with \$97,592 in 1908. The exports of india-rubber in 1909 were valued at \$8,874,485, as compared with \$6,887,419 in 1908. Belting, hose and packing formed the largest single class on the list of exports, amounting in value to \$1,800,300 in 1909, as compared with \$1,256,490 in 1908. Rubber boots and shoes to the number of 3,150,294 pairs, were valued at \$1,653,486 in 1909, as compared with 2,440,663 pairs, valued at \$1,329,170 in 1908. Scrap and old rubber exported in 1909 were valued at \$519,418, as compared with \$393,686 in 1908. Reclaimed rubber in 1909 was valued at \$486,675, as compared with \$327,388 in 1908. All other exports aggregated \$4,413,626, as compared with \$3,580,685 in 1908.

Rubber advanced in price during the year. Para "upriver fine raw," for example, sold at New York for \$1.21 to \$1.22 a pound at the beginning of the year and \$1.78 to \$1.80 at its close, with other grades in proportion.

The imports of rubber at Antwerp in 1909 were 4685 (metric) tons as compared with 5035 tons in 1908, due in the main to the diminishing supply from the Belgian Congo, whence only 3492 tons were imported as compared with 4202 tons in 1908. The Belgian government decided to abandon to private enterprise the exploitation of rubber in the Congo, and its proposed plan was to be carried out in three sections at intervals of one year from July 1, 1910. Difficulty had been experienced in enforcing the obligation to plant and tend a number of trees and vines in proportion to those destroyed and it was proposed to abandon this and to levy an export duty which will be devoted to a special fund for replanting. In this way it was intended to plant annually about 2000 hectares under state auspices, using chiefly Hevea and Funtumia.

The entries at the port of Para for the crop year ending June 30 of rubber of all grades were given as follows:

1905-6 tons.....	34,490
1906-7 tons.....	38,095
1907-8 tons.....	36,650
1908-9 tons.....	33,680

BRAZIL'S EXPORTS OF RUBBER PRODUCED IN THE REPUBLIC

Compiled by Federal Bureau of Statistics

PARA RUBBER (Including Cauchó)

	1907	1908
Manaos	16,767,834 Kg.	18,065,000 Kg.
Para	16,017,611	16,781,000
Corumbia.....	392,594	537,000
Other Ports	313,000
Total	33,382,681	35,696,000

CEARA RUBBER ("Manicoba")

	1907	1908
Ceara	588,854 Kg.	579,000 Kg.
Bahia.....	1,285,103	1,249,000
Ilha do Cajueiro.....	520,824	327,000
Other Ports		11,000
Total	2,428,678	2,186,000

MANAGABEIRA RUBBER

	1907	1908
Bahia	264,811Kg.	106,409Kg.
Rio de Janeiro	75,586	52,607
Santos	100,931	33,092
Corumba	75,800	80,337
Other Ports		72,072
Total	678,238	344,607
Grand total	38,489,597	38,206,607

It was reported during the year that probably about 400,000 acres in tropical Asia were planted with *Hevea brasiliensis* and it was estimated that in seven or eight years this would furnish about 40,000 to 50,000 tons of clean rubber or a good deal more than half of the world's present production.

Rubber as an industry has flourished in the Federated Malay States, which have become the largest exporting country in the East. Java also had a rubber industry firmly planted and was believed to be in a position to become an important producer of rubber. Sumatra and Borneo were being exploited as rubber countries, and Ceylon and India had extensive plantations.

RUM. See LIQUORS, FERMENTED AND DISTILLED.

RUMANIA. A constitutional monarchy composed of the Moldo-Wallachian provinces (formerly Turkish) and the territory of the Dobruja. Capital, Bucharest.

AREA AND POPULATION. Total area, 50,715 square miles. Population (1890), 5,956,690; estimated, 1907, 6,684,265; 1908, 6,700,000. The census of 1899 returned 5,489,296 Rumanians; 262,447 Jews; 104,108 Austro-Hungarians; 22,989 Turks; 20,057 Greeks. Large numbers of Gypsies are scattered over the country. The movement of the population during three years is given below:

	Marriages	Births	Deaths	Still-born
1906....	66,863	262,438	157,204	6,167
1907....	70,263	274,487	175,794	6,567
1908....	61,499	272,850	185,393	6,963

The principal cities with their inhabitants (estimated 1908) were: Bucharest, 290,616; Jassy, 70,320; Galatz, 65,495; Braila, 59,964; Ploeshti, 47,999; Craiova, 45,807; Botosani, 33,738; Focșani, 24,652; Berlad, 24,248.

EDUCATION, ETC. Primary education is free and nominally compulsory; but inadequate provision is made. Nearly 80 per cent. of the population is illiterate. The 4264 public elementary schools had, in 1905, 6194 teachers and 500,158 pupils. There are 11 normal schools, with 1489 students; 107 high and secondary schools, with 1110 teachers and 20,153 pupils; besides special agricultural, silvicultural, in-

dustrial, and engineering schools. There are two universities, at Bucharest and Jassy.

The population is divided according to religions as follows: Orthodox Greeks, 5,451,787; Jews, 266,652; Roman Catholics, 149,667; Mohammedans, 44,732; Protestants, 22,749; others, 21,103. The Berlin Treaty provides for religious tolerance and equality; but the Jews have been harshly treated.

AGRICULTURE. The soil is very rich, and but for the severe droughts would be among the most productive in Europe. A large majority of the population is engaged in agricultural pursuits, over 40 per cent. of the agricultural land being in small holdings of 25 acres or less possessed by 1,015,302 peasant proprietors. Of the total area, 5,476,166 hectares are actually under crops and 525,249 are fallow; 1,014,015 are under pasture; 491,126 under meadow; 184,807 under vineyards and orchards. Forests cover 2,282,300 hectares, of which the state owns 1,065,529. The forest products form a valuable asset. Cattle and sheep raising is an important industry. In December, 1900, the live-stock numbered 2,589,526 cattle, 5,655,444 sheep, 864,324 horses, 1,709,205 swine, and 232,515 goats. Wheat, corn, millet, barley, rye, beans, peas, flax, hemp, vines, fruits, sugar-beets, and tobacco are grown.

MINERALS. Minerals and precious metals are said to abound, but only salt, coal, and petroleum are worked. Salt is a government monopoly. The output of coal in 1905-6 was 140,671 metric tons. The output of the petroleum wells, both government and private, was, in 1905-6, 685,364 metric tons; in 1906-7, 887,091; in 1908, 1,147,727 (an estimate for the calendar year). There are reported to be 76 pipe lines, with a total length of 410 miles.

COMMERCE. The total imports and exports amounted in 1907 to 430,590,115 and 554,018,631 lei respectively (1 lei=19.3 cents), against 422,114,125 and 491,360,178 lei in 1906. The principal articles of trade and their value in 1907 are given as follows:

Imports	Lei
Metals and metal manufactures.....	115,309,000
Textiles (vegetable fibre)	74,151,000
Machinery	44,281,000
Wool and woolen manufactures.....	36,061,000
Hides and skins.....	14,063,000

Exports	Lei
Cereals and flour	473,342,000
Wood and wooden wares	25,356,000
Petroleum	24,748,000
Fruits and vegetables	11,066,000
Animal products	6,629,000

The principal countries of origin and destination are given in the following table:

	Imports	Imports	Exports
	1906	1907	1907
Germany	142,264,272	147,533,000	56,078,000
Austria-Hungary.....	119,387,580	105,272,000	32,730,000
Great Britain....	62,680,716	69,881,000	86,387,000
Italy	18,212,206	20,549,000	44,366,000
France	19,413,118	20,375,000	32,424,000

COMMUNICATIONS. There were (1908) 1,989 miles of railway in operation, and 295 miles under construction or projected. All lines are worked by the government. In 1907 the length

of telegraph lines was 4770 miles, with 12,475 miles of wire and (1907-8) 3047 offices. There were 18,092 miles of telephone lines, with 30,135 miles of wires. In 1907-8 there were 3280 post-offices. The merchant marine (1909) consisted of 407 sailing vessels of 123,024 tons, and 88 steamers of 22,142 tons. The number of vessels entered at the ports in 1908 was 32,915 of 9,269,209 tons; cleared, 32,564 of 9,194,311 tons.

An International Commission, created by the Treaty of Paris and with powers enlarged by the Treaty of Berlin, has its seat at Galatz, and exercises sovereign powers over the navigation of the Danube. Its income, derived principally from shipping dues, amounts annually to about £60,000.

FINANCE. The unit of value is the leu, worth 19.3 cents. The revenue and expenditure for three fiscal years (estimate for 1908-9) are given in lei as follows:

	1906-7	1907-8	1908-9*
Revenue.....	238,916,239	316,322,638	411,011,035
Expenditure.....	237,739,238	248,780,419	408,741,268

* Including railway and other budgets not hitherto comprehended in the state budget.

The budget for 1910 balanced at 435,685,322 lei.

The capital of the debt stood, March 31, 1909, at 1,450,674,563 lei. The service of the debt for 1908-9 was estimated at 84,370,244 lei (interest, 59,877,465; redemption of capital, 24,402,779). The National Bank of Rumania had, December 20, 1908, capital and reserves, 37,264,000 lei; notes and cash bonds in circulation, 265,676,000; cash in hand, 127,313,000; public funds and property, 17,969,000.

ARMY. By a law of 1908 reorganizing the army personnel military service was made compulsory between the ages of 21 and 40, 7 years being spent with the active forces, 5 years with the reserve, 3 years with the militia, and the remainder of the time with the territorial army. The period of service for infantry requires two years with the colors and five on leave, for other branches three years with the colors and four on leave, and for the navy four years with the colors and three on leave. In the Rumanian army a distinction was made between the illiterates and the educated classes, in the annual conscription of about 60,000, the latter amounting to about 10,000, forming the Schimbul and merely passing through short periods of training and stated drills. The Schimbul in 1909 was being diminished and its infantry abolished, increased thoroughness of training being the rule. The reserve militia and territorial armies are all elaborately organized and military training is given young men before the age of conscription. The annual recruit contingent is about 60,000. The peace effective

in 1909 was 3835 officers, 589 civil employees, 1049 military cadets, 88,176 men, 18,881 horses and 452 cannon. In time of war the army would be increased to 7600 officers, 280,000 men, 86,000 horses, and 644 cannon. The total war strength was estimated at 650,000. The army is organized in 4 corps, each of two divisions (two brigades) with the exception of the second, which has 3. There were 36 regiments of infantry, 34 battalions of reserves, 9 battalions of rifles, 2 companies of gendarmes and 1 corps of frontier troops, 18 regiments of cavalry, 18 regiments of field artillery with six mountain and howitzer batteries, 2 regiments of fortress artillery, 4 squadrons of military train, 4 battalions of sappers and miners, 4 companies of telegraph troops, 1 battalion of railway troops, 1 battalion of pioneers, 1 battalion of pontoon train, 1 balloon section, 4 companies of sanitary troops, and various other technical and supply troops. An elaborate system of military instruction was maintained, with a war college and various service schools, as well as schools for the instruction of non-commissioned officers.

NAVY. The navy consists of one protected cruiser of 1320 tons; a training-ship of 350 tons; 7 gunboats, 6 coast-guard vessels, a screw despatch boat (240 tons), 6 first-class and 2 second-class torpedo-boats. Twelve naval police boats, with eight vedettes, were launched October 4, 1907. Two new armored cruisers are projected.

GOVERNMENT. The executive power is vested in the King, with a cabinet of eight and the Prime Minister. The legislative body is composed of a Senate (120 members), and a Chamber of 183 deputies elected by a system of direct and indirect popular votes based on property qualifications. The present King, Charles I., was born April 20, 1839 (o. s.), married November 15, 1869, to Elizabeth, Princess von Wied (Carmen-Sylva); crowned May 22, 1881. The heir-presumptive is Prince Ferdinand von Hohenzollern, born August 24, 1865. The Council of Ministers (March and November 1909) is composed as follows: Premier and Minister of the Interior, J. J. C. Bratiano; Foreign Affairs, A. G. Djuvara; Public Instruction and Worship, Spiru Haret; Commerce and Industry, M. G. Orleano; Finance, E. Costinesco; Agriculture and Domains, A. Costinesco; Justice, T. Stelian; War, General Crainiciu; Public Works, B. G. Mortzun.

RUSSELL SAGE FOUNDATION. See CHARITY ORGANIZATION.

RUSSIA. An empire of northeastern Europe and northern Asia, stretching from the Baltic to the Bering Seas, and from central Europe and Asia to the Arctic Ocean. Its capital is St. Petersburg.

AREA AND POPULATION. The area and population in 1907, according to the latest statement of the Russian Central Statistical Committee, and the estimated population for 1906 and 1908, are given below:

	Area sq. miles	Pop. 1906	Pop. 1907	Pop. 1908
Russia	1,862,524	109,354,600	111,279,500	113,841,466
Poland	49,018	10,947,300	11,138,700	11,360,501
Finland	125,754	2,892,088	10,653,900	2,985,021
Caucasia	180,603	10,458,500	6,893,900	10,290,422
Siberia	4,786,730	6,740,600	9,118,000	7,047,222
Central Asia	1,325,530	8,941,000	2,925,300	9,306,229
Internal waters	317,468
Total Russian Empire.....	8,647,657	149,331,088	152,009,300	155,473,547

The population, according to the census of 1897, was divided by races as follows: Aryans, 100,331,516; Uralo-Altayans, 17,869,067; Jews, 5,070,205; Georgians, 1,352,535; other Caucasians, 1,091,782; Chinese, Japanese, and Koreans, 86,113; Hyperboreans, 33,802. The statistics of the Medical Department of the Ministry of the Interior for 1904 give the total births at 6,413,485 (European Russia, 5,539,174; Asiatic Russia, 874,311); the total deaths at 3,949,227 (European, 3,406,452; Asiatic, 542,775); showing a total excess of 2,464,258 births over deaths. The emigrants in 1904 numbered 128,211, of whom 80,892 went to the United States and 21,434 to Great Britain; in 1905, 72,425 went to the United States and 18,811 to Great Britain. The chief cities with population are given as follows: (1) European Russia: St. Petersburg, 1,678,000; Moscow, 1,359,254; Warsaw, 750,426; Odessa, 449,673; Lodz, 351,570; Kiev, 319,000; Riga, 282,230; Kharkov, 173,989. (2) Asiatic Russia: Baku, 179,133; Tiflis, 159,590; Tashkent, 155,673; Irkutsk, 70,000; Tomsk, 67,419.

INTERNAL MIGRATION. A bad harvest in European Russia is the signal for the eastward march of thousands into that new land of promise—Siberia. The year 1908 was a poor crop year in many districts, and the figures for the 1909 emigration into Siberia are expected to exceed those of all previous years. The returns for 1908 give the internal emigration at 758,812, of whom 121,204 returned, leaving 637,608 permanent settlers, against 415,37 in 1907, 125,800 in 1906, and 29,126 in 1905.

EDUCATION AND RELIGION. The provision for primary education, especially in the country districts, is small out of all proportion to the needs of the population, not more than about one per cent. of whom receive instruction of any sort. The Ministry of Public Instruction and the Holy Synod divide the control and the burden of maintenance of the elementary schools, of which there were in 1906 92,501, with 170,894 teachers and 5,738,280 pupils. Secondary education is provided in gymnasias, ogymnasia, and realschools for both sexes; but numbers and attendance are small. The 333 viochas (districts) maintain their own gymnasias and progymnasias. Special schools are few and confined to the principal (Eu-

The established religion is the Russo-Greek, officially known as the Orthodox Catholic Faith. The Emperor is nominally the head of the church, but the Procurator of the Holy Synod is the practical director in church affairs. Although all religions are professedly tolerated, there are effective limitations placed on the Jews, and the dissenters (estimated at 12,000,000) are persistently persecuted. The division of the population according to religions is given as follows (no reliable figures existing for number of dissenters, who are largely included among the Greek Orthodox): Greek Orthodox and United Church, 87,123,604; Mohammedans, 13,906,072; Roman Catholics, 11,467,994; Jews, 5,215,805; Lutherans, 3,572,653; Dissidents, 2,204,506; Armenian Gregorians, 1,179,241; Buddhists, 433,863; Reformed, 85,400; Mennonites, 66,564; Armenian Catholics, 38,840; Baptists, 38,139; Karaims, 12,894; Anglicans, 4183; other Christians, 3952; other non-Christians, 285,321.

AGRICULTURE. Of the total cultivated area in 1907, 226,812,000 acres were sown to cereals, 144,592 to tobacco, 10,305,000 to potatoes, 5,568,000 to flax and hemp, 1,517,083 (1907-8) to sugar beets; 87,127,000 were under meadow. In European Russia (1905) 401,435,000 acres were arable, 191,473,000 under orchards, meadow, and grass, 474,000,000 under forest; in Poland, 17,739,000 arable, 6,059,000 under orchards, etc., and 6,700,000 under forest. The ownership of the productive area was divided as follows: The State and Imperial family, towns, etc., European Russia (1905) 417,018,000 acres and Poland (1907) 2,184,000 acres; peasants, 374,634,000 and 12,233,000; private owners, 274,656,000 and 13,726,000. The peasants—chained to the soil by a debt which they have had no voice in assuming and which had increased, up to January 1, 1906, to a total of 1,630,681,249 roubles—being unable to meet annual payments on their holdings, the 1906 payment, by a manifesto of November 3 (16), 1905, was reduced to one-half and the 1907 payment had to be annulled. A failed crop means unpaid interest, unpaid interest results in accumulated debt; and the consequence of the increasing burden is a condition of actual serfdom more hopeless than that before the "liberation."

The main crops and the total yield for three successive years are given as follows:

	1907 (poods)*	1908 (bushels)†	1909 (bushels)†
s	803,926,600	942,571,000	1,145,373,000

One pood=36 English pounds.

Bushels of weight: Wheat and potatoes, 60 pounds; rye, corn, and millet, 56 pounds; barley buckwheat, 48 pounds; spelt, 36 pounds; oats, 32 pounds.

in) cities. There are universities at St. Petersburg, Moscow, Odessa, Warsaw, Kazan, Kharkov, Tomsk, and Yuriev. According to the census of 1897, 72 per cent. of the population over nine years of age were illiterate.

The area planted to flax (3,687,500 acres), in 1907, yielded 33,641,200 poods of seed; that planted to hemp (1,880,600), 25,524,700 poods of seed and 30,450,200 of fibre. Under tobacco (1906) were 144,592 acres, yielding 72,330

tons. The total number of live-stock is given for 1908 as follows: Cattle, 43,204,000; horses, 29,285,000; sheep and goats, 61,549,000; swine, 12,734,000.

Of the total forest area, the state possesses 286,428,666 acres in European Russia, 13,418,328 in the Caucasus, 361,945,497 in Asiatic Russia (exclusive of the Amur region), 288,742,000 in the Amur region; a total of 950,534,491 acres, from which the revenue derived in 1907 amounted to 58,987,000 roubles (1 rouble = 51.5 cents), against 57,534,000 in 1906. See IRRIGATION; FORESTRY.

MINING AND METALS. The Obdorsk, Ural, and Altai regions contain enormous mineral wealth and are the principal centres of the mining and metallic industries producing gold, silver, lead, platinum, copper, iron, rock salt, marble, asbestos, manganese and kaolin. Russia is, after the United States, the world's greatest petroleum producer. Great beds of steam coal and anthracite have been discovered in the basin of the Donetz. The latest official figures for the output of the various mines are as follows: Gold (1906), 29,333 kilos; platinum (1905), 5158 kilos (about 95 per cent. of the world's production); silver (1906), 5169 kilos; lead (1905), 526 tons; zinc (1906), 8907 tons; copper (1906), 10,256 tons, (1907), 14,554 tons, (1908 estimate) 16,591 tons; coal (1906), 21,368,000 tons; salt (1905), 112,551,000 poods; asbestos (1905), 15,970,285 poods; quicksilver (1904), 325 tons. The annual output of manganese ore is reckoned at about 30,000,000 poods; of chromic iron ore, 1,600,000 poods. The output of the Baku oil fields was 410,000,000 poods in 1905, and 448,400,000 in 1906. The production of pig iron was, 1906, 164,226,000 poods; 1907, 171,953,000 poods. Iron and steel (worked), 1906, 138,411,000 poods; 1907, 145,620,000 poods.

MANUFACTURES. The latest statistics of the Department of Industry of the Ministry of Finance give the following figures for the inspected manufactories in Russia (European), Poland, and four governments of the Caucasus, on January 1, 1906: Number of establishments, 14,376; employees, 1,693,322, of whom 1,104,520 were men, 412,876 women, and 175,927 children. There were, June 30, 1906, 2551 distilleries with output of alcohol 99,559,000 gallons; 1907, 2559 with output 106,794,000 gallons; 1908, 2610 with 115,100,000 gallons. The number of sugar works, June 30, 1906, was 277 with a production of 55,596,000 poods; 1907, 279 with 77,671,000 poods; 1908, 278 with 76,046,000 poods. The number of cotton spindles in operation (March 1, 1909) is given as 7,829,240; in course of construction, 361,284.

COMMERCE. The following table shows the development of the total foreign commerce of the empire, with value in roubles, for three successive years:

	1906	1907	1908
Imports: Merchandise.....	800,690,000	847,365,000	926,517,865
Precious metals	37,963,000	10,937,000	No returns
Exports: Merchandise	1,094,886,000	1,053,010,000	1,005,089,955
Precious metals	17,899,000	13,108,000	No returns

The Commerce of European Russia (by way of the European frontiers, including the trade with Finland and by the Caucasian borders of the Black Sea) in great classes for three years, is given in next column, in roubles:

	1906	1907	1908
Articles of food.....	105,771,000	118,890,000	123,375,000
Raw and half-raw materials.....	337,838,000	375,776,000	406,780,000
Animals	975,000	1,054,000	1,409,000
Mfd. goods.....	179,860,000	200,508,000	215,743,000
Total imports.....	624,444,000	696,228,000	747,307,000
Exports	1906	1907	1908
Articles of food.....	597,474,000	559,745,000	517,340,000
Raw and half-raw materials.....	346,010,000	383,342,000	370,548,000
Animals	27,250,000	22,731,000	23,356,000
Mfd. goods.....	31,137,000	26,195,000	26,702,000
Total exports.....	1,001,871,000	992,013,000	937,976,000

Across the Asiatic frontier rice was imported to the value of 5,840,000 roubles in 1905, 3,721,000 in 1906, 4,424,000 in 1907; raw cotton, 6,119,000 roubles in 1905, 7,833,000 in 1906, 7,412,000 in 1907. Sugar was exported across the Asiatic frontier to the value of 12,720,000 roubles in 1905, 15,525,000 in 1906, 12,429,000 in 1907; cottons, 18,080,000 roubles in 1905, 22,027,000 in 1906, 19,272,000 in 1907. The value of the total trade of the empire for 1906 and 1907, and of the trade of European Russia across the three frontiers above mentioned for 1907 and 1908, with the different countries of origin and destination, may be seen in the table on next page.

The principal articles of import from Germany are machinery and woolens; from Great Britain, machinery and coal; from the United States and Egypt, raw cotton; exports to Germany, Great Britain, the Netherlands, France, and Belgium consist in large part of cereals, timber, eggs, and flax. The exports of pig iron in 1908 were 9344 tons, against 72,384 tons in 1907, and the exports of iron and steel and manufactures thereof in 1908 were 98,937 tons, against 146,952 tons in 1907. The principal countries to which the exports went in 1908 were as follows, in tons: Pig iron: Italy, 4848; Austria-Hungary, 2544; Germany, 912; Great Britain, 672;—raw iron and steel: Great Britain, 22,672; Rumania, Turkey, and Bulgaria, 21,936; Italy, 6928; Germany, 2224; Austria-Hungary, 1568; Netherlands, 880;—iron and steel and manufactures thereof: Germany, 832; Great Britain, 224; Austria-Hungary, 144; Rumania, Turkey, and Bulgaria, 132; Italy, 128.

SHIPPING. The shipping entered and cleared at all ports in the foreign trade of the Empire for 1907 is given on next page.

The merchant marine consisted, January 1, 1909, of 2465 sailing vessels of 257,716 tons, and 898 steamers of 443,243 tons; total, 3363 vessels of 700,959 tons. The naphtha flotilla of the Caspian Sea numbers 57 steamers and 263 sailing vessels.

INTERNAL COMMUNICATIONS. The length, December 1, 1908, of state railway lines was 28,091 miles; of lines owned and operated by companies, 11,851 miles; of local lines 1448 miles; making a total of 41,390 miles (34,662

European Russia, 6728 in Asiatic Russia). Passengers carried (1907), European Russia, 6,213,000 Asiatic Russia, 6,493,000; freight, 92,000 poods and 369,000 poods; gross receipts, 705,692,000 and 80,012,000 roubles; total cost of construction (1904), 5,174,410,000 and 7,235,000 roubles. In 1905 the railways employed 751,197 men. The new lines opened to traffic in 1907 were the Bologoze-Volkovysk (555 miles), the Krasnyi-Kut Buzan (318), and short lengths totaling 193 miles. Lines opened January 1-October 23, 1908, were the Ulukhanlu-fa (118) and short lengths totaling 96 miles. Lines under construction (1909) were the

Achinsk-Irkutsk and the Perm-Yekaterinburg (total 1236 miles, of which 257 were open for temporary service).

Some idea of the extent of projected railways in Russia may be obtained from the following list published by the London *Times* (not including the Armavir-Toaysé line along the Black Sea littoral of the Caucasus, under construction with the aid of British capital, nor the Podolia Railway, the statutes whereof have already been approved; the length of the latter to be 148 miles, the line to connect Shepetovka-Proskurov-Kaminiets-Podolski): The Omsk-Semipalatinsk line, 752 miles; the Ob (Yurga)-Semipalatinsk, 510 miles; the Uralsk-Semipalatinsk, 1428 miles; the Kharkov-Kherson and Konotop-Poltava-Lokhvitsa, 659 miles; Kharkov-Kherson, 328 miles; Riga-Lgoff, 662 miles; Orsha-Nizhnednieprovsk, 551 miles; Lgoff Minsk, 374 miles; the Brainsk-Minsk, 310 miles; the Kiev-Balta and Tsvetkovo-Pogrebishche, 220 miles; the Kiev-Uman-Nikolaieff, 382 miles; the Uman-Nikolaieff, 178 miles; the Tsvetkovo-Kazatin, 165 miles; the St. Petersburg-Kinel or Samara via Rybinsk, Nijni Novgorod and Simbirsk, with alternate terminus at Samara, 879 miles; the Babaev-Batraki, 609 miles; the Vologda-Viatka (Nijni-Kotelnitch), 218 miles.

There are in European Russia proper 77,721 miles of rivers, canals, and lakes (16,080 navigable for steamers, 8598 for small sailing ves-

sels, 28,516 for rafts); in Asiatic Russia 73,848 (21,544 for steamers, 8289 for small sailing vessels, 25,065 for rafts). The river fleet of European Russia numbered (1906) 3696 steamers (3295 of 165,004 horse-power in 1900), and vessels other than steam 22,980 of 13,000,000 tons; freight carried (1906), 2,084,000 poods.

The total length of telegraph line was (1907) 118,334 miles, of which 105,619 miles were owned by the state, the remainder by the railways, private companies, and the police; number of telegraph offices, 6363; number of post-offices, 13,083.

FINANCE. The unit of value is the rouble, worth 51.5 cents. The total ordinary and extraordinary revenue and expenditure for three fiscal years (1908 being the budget estimates voted by the Duma and the Council of the Empire and sanctioned by the Emperor) are as follows:

	1906	1907	1908
Ordinary	2,271,669,948	2,342,474,585	2,386,946,498
Extraordinary	1,084,110,662	143,043,178	194,457,670*
Total	3,355,780,610	2,485,517,763	2,581,403,168
Expenditure			
Ordinary	2,061,134,448	2,195,968,445	2,312,251,098
Extraordinary	1,151,562,990	386,640,032	269,152,078
Total	3,212,697,438	2,582,608,477	2,581,403,168

* 181,476,470 rubles to be realized by loan.

The estimated revenue and expenditure, ordinary and extraordinary, for the fiscal year 1909 balanced at 2,595,048,978 rubles. The principal sources of revenue and the main avenues of expenditure as contained in the budget for the year are given in the following table:

Revenue	Roubles
State monopolies:	
Sale of spirits	717,000,000
Posts	55,500,000
Telegraphs	27,400,000
Mint	6,200,000
Mines	388,300
State domains	686,696,982
Indirect taxes:	
Customs	276,450,000
Excise	247,308,200
Stamps, dues, etc.	140,708,578
Direct taxes:	193,882,233
Repayment of loans	41,189,843
War indemnity	10,622,405
Redemption payment (peasants)	570,700
Various	54,824,741
Total ordinary	2,458,740,982
Extraordinary	5,181,200
From loans	131,126,798
Total revenue	2,595,048,978
Expenditure	Roubles
Communications	563,156,218
War	473,919,473
Finance	452,117,269
Public debt	396,362,868
Interior	154,377,910
Marine	89,353,158
Public instruction	63,936,902
Justice	71,488,306
Agriculture	71,036,472
Commerce and industry	39,177,992
Holy Synod	31,663,444
Imperial household	16,395,595
Audit	10,017,704
Great State administrative and Congressional bodies	8,385,621
Foreign affairs	6,211,014
Maintenance of stud	1,970,971
Various	10,000,000
Total ordinary	2,449,534,917
Extraordinary	145,514,061
Total expenditure	2,595,048,978

The total public debt stood, January 1, 1908, at 8,835,884,191 rubles. Interest for the fiscal year 1909 was reckoned at 371,782,060 rubles; amortisation, 23,519,493; exchange, 1,061,315; total service, 396,362,868.

The Bank of Russia stood, January 8 (21), 1909, as follows: Assets: Cash and credit notes, 1,423,873,000 rubles; portfolio, 218,631,000; advances, loans, 277,722,000; bonds, stock, 97,756,000; branch accounts, 346,922,000. Liabilities: capital and reserve, 55,000,000 rubles; note circulation, 1,200,000,000; deposits, etc., 448,947,000; treasury account current, 210,930,000; branch accounts, 433,176,000. There were (1908) 6710 savings banks, with 6,210,238 depositors and 1,149,200,000 rubles of deposits; 49 mortgage banks; the Peasants' Land Bank; and 36 shareholders' commercial houses.

NAVY. The larger vessels of the effective navy in 1909 were as follows: First-class battle-

ships: one of 13,516 tons; one of 12,912 tons; one of 12,480 tons;—second-class battleships: one of 13,318 tons; one of 10,280 tons; one of 10,180 tons; one of 9244 tons; one of 8880 tons; one of 8433 tons;—armored cruisers: one of 15,000 tons; one of 12,336 tons; one of 12,130 tons; three of 7900 tons each. In 1909 there were building the following first-class battleships: four of 23,000 tons each; two of 16,630 tons each; two of 12,733 tons each. The number and displacement of effective war ships, built and building, of 1000 or more tons, and of torpedo craft of 50 or more tons, were as follows in 1909: Battleships of 10,000 tons and over, 13, aggregating 213,200 tons; coast-defense vessels, 4, of 21,380 tons; armored cruisers, 7, of 70,200 tons; cruisers over 6000 tons, 7, of 46,460 tons; one cruiser of 3,100 tons; cruisers 3000 to 1000 tons, 7, of 8800 tons; torpedo-boat destroyers, 97, of 36,254 tons; torpedo-boats, 56, of 6734 tons; submarines, 32, of 6122 tons; total, 224 war vessels, aggregating 412,250 tons. For the ten-year period ending December 31, 1910, Russia's naval expenditure is placed at \$510,461,000.

ARMY. The Russian army is divided into the European, the Caucasian, and the Asiatic armies, the periods of service and the organization varying more or less in each. Military service is universal and compulsory, there being separate classes of service and requirements for the troops of Russia proper, for the Cossack forces, for Finland, and for the native races under Russian rule. Normally military service extends from the 21st to the end of the 43d year, three years (four years in the cavalry and engineers) being spent with the colors in the first line or active army, and 13 or 15 years in the reserve, with two periods of training of 6 weeks, and the remainder in the first van of the territorial army or *Opoltschenie*. This latter division or militia embraces those who are not included in the annual contingent for the

standing army, in number about 200,000 annually, and those who have completed their service either in the active army or the reserve. There are different regulations for the recruitment of the Cossack and Asiatic forces as well as for exemptions in various parts of the empire. The Cossacks, however, have a peace effective strength of 65,930 men and 52,400 horses, and of these it was estimated that in 1909 not more than 58,000 were permanently with the colors. This force, however, could readily be raised to a war strength of about 150,000 men with 4000 officers, and as every able-bodied Cossack not in regular service is required to supply and maintain his own horse and be in readiness for military duty, this portion of the army may be seen to possess considerable strength. The Russian army in Europe is distributed through nine military districts, including Finland, the Caucasus, and the territory of the Don Cossacks and embraces 26 corps. Statistics as to the strength of the Russian army were not available, but the following table gives an approximation of the peace establishment:

Europe and the Caucasus	
Infantry.....	1103 Battalions
Cavalry.....	718 Squadrons
Artillery.....	{ 486 Field Batteries 220 Companies Fortress Art. }
Engineers.....	103 Companies
Army Services.....	84,000
Total.....	949,000
Asiatic Russia	
Infantry.....	211 Battalions
Cavalry.....	91 Squadrons
Artillery.....	{ 164 Field Batteries 58 Companies Fortress Art. }
Engineers.....	117 Companies
Army Services.....	8,000
Total.....	124,000

According to the budget the total peace effective was estimated at 1,384,000, in which were included the frontier guards, the gendarmerie, and the Cossacks. On a war footing the Russian active army would have a strength of about 56,500 officers and 2,855,000 men, including 1,792,000 infantry and 196,000 cavalry. This army of course would be widely distributed and not effective in any one part of the empire. To this active army must be added the available troops of the reserve, estimated at 1,064,000, frontier battalions 41,000, and Cossacks 42,000; and the territorial reserve of about 1,000,000 and the Opoltscheni of 1,300,000. The war strength of Russia was estimated at between 4,000,000 and 5,000,000, but it was considered very doubtful whether even two-thirds of this force could be put into the field or mobilized within a reasonable space of time. The annual contingent of recruits for the Russian army in 1909, as fixed by the Council of the Empire and the Duma was the same as in 1908, namely, 456,535 men. Of these 432,9 were assigned to the army proper, 14,500 to frontier guards, and 9596 to the navy. In addition there were over 16,000 Cossacks. There is considerable evasion of the compulsory service, especially on the part of the Jewish population, and in 1908 the number found fit for military service was 17,926 less than the contingent fixed by the Duma. The military

budget for 1909, approved by the Council of the Empire and the Duma, amounted to £49,366,000, besides an extraordinary charge of £1,661,460 for expenses on account of the Russo-Japanese War.

GOVERNMENT. All executive, legislative, and judicial powers are vested in the Emperor. The Council of the Empire (partly appointive, partly elective) and the Duma have equal legislative powers. The third Duma has been in session since November 1 (14), 1907. The administration of the empire is accomplished through various boards or high councils—the Senate, the Holy Synod, the Committee of Ministers, and the Council of Ministers. The Emperor of all the Russias (1909), Nicholas II., was born May 6 (18), 1888; married, November 14 (26), 1894, to Princess Alix of Hesse. He succeeded to the throne October 20 (November 1), 1894. The heir-apparent is the Grand-Duke Alexis Nicholayevitch (Czarevitch), born July 30 (August 12), 1904. The heads of departments in 1909 were as follows: President of the Council of the Empire, M. G. Akimoff; President of the Council of Ministers and Minister of the Interior, P. A. Stolypin; Minister of the Imperial Household, General V. B. (Baron) de Fredericksz; Foreign Affairs, A. P. Isvolsky; War, General W. A. Sukhomlinoff; Marine, Vice-Admiral E. A. Voyevodsky; Justice, J. G. Stcheglovitoff; Public Instruction, A. N. Schwartz; Finance, W. N. Kokovtsoff; Commerce and Industry, W. J. Timiriazeff; Communications, S. V. Rukhloff; Procurator-General of the Holy Synod, S. M. Lukianoff; Agriculture, A. W. Krivocheyn; State Comptroller, P. A. Kharitonoff. President of the Duma, N. A. Khomiakoff.

The government of Poland is absolutely incorporated with that of Russia, and the employment of the Polish language for any public purpose is prohibited.

In the Baltic Provinces the Russian language is obligatory for all public purposes, as well as in the University of Dorpat, which has been deprived of all privileges of self-government. The administration headquarters has been transferred from Dorpat (whose name has been altered to Yuriev) to Riga.

HISTORY

AGRARIAN LAW. The agrarian question has been the most important one before the country. The first two Dumas desired a too radical solution of the problem and their aims were, in the circumstances, wholly impracticable. The third Duma, which was chosen as a result of the wholly arbitrary action of the government on a principle that excluded genuine popular representation, did not reflect in any sense the desires of the people, but rather those of the large landowners. In accordance with its constitutional privilege, the government promulgated a provisional law dealing with the agrarian question, subject to the subsequent approval of Parliament. This provisional law of 1906 was accepted by the Duma in its second session. It did not go far toward meeting the wishes of the reformers, but it nevertheless effected a breach in the old system, and it was thought that if properly executed, it would lead eventually to the Europeanizing of the land system. It at least prepared the way for the abolition of the system of communal property embodied in the Russian *mir*. It provided that every cultivator

with a parcel of land, even if the land was held as a part of the *mir*, should after twenty-seven years of possession become the absolute proprietor. Many speeches were made against it by members of the Left, who declared that it pillaged the poorer peasant on behalf of the rich one. The rich peasant who worked the soil acquired a property right, while the poor man who worked in a city and therefore could not cultivate his share in the *mir* forfeited the right. Approval of the law was voted by a large majority. Moderate opinion inclined to the view that it was an important step in the right direction. It did not settle the question, which was still open, but it prepared a way out of the difficulty.

THE RELIGIOUS QUESTION. Religious liberty was a prominent feature of the Manifestos of April and October, 1905. The clergy and the reactionary element generally were opposed to any measure that enforced this principle. The Church was the basis of the Russian bureaucracy, and the firm supporter of the government. All the governing classes were Orthodox. In spite of the Manifestos, the government planned to restrict in important respects the principle of religious liberty. It wished to forbid any change from Orthodoxy to a non-Christian faith. The extremists even went so far as to demand that no one should be permitted to abjure the Orthodox faith except after a period of forty days, during which he had listened to the admonitions of the clergy. The members of the Right formulated this plan by which a certificate must be produced by anyone who wished to change his faith, setting forth that for forty days the clergy had labored with him in vain. In spite of these efforts and the opposition of M. Stolypin, the Duma succeeded in carrying through a moderate measure, insuring a fair degree of religious liberty. It gave anyone the right to change his faith and even to become a non-Christian. On this last point the bill encountered vigorous opposition. M. Stolypin protested strongly against proclaiming freedom of conversion from a Christian to a non-Christian faith. Nevertheless it was carried and it permitted any person to describe himself as a professor of no creed. As it required the consent of the Council of State and the Czar, however, it was doubtful whether it would go into effect.

THE QUESTION AS TO THE POWER OF THE PURSE. According to the fundamental laws of the empire the Czar has exclusive competence in military and naval matters. Doubt has existed, however, as to the application of this principle to the army and navy budgets. Parliamentary control in all financial matters being the essence of constitutional government, the settlement of this question was of great importance to the Constitutionalists. The Octobrist leader, M. Goutchkoff, had directed his policy toward the twofold aim of strengthening constitutional government and improving the army and navy. He interpreted the laws entirely in favor of the Duma as regards the control of the army and navy financial items, and he believed that in this respect the Premier, M. Stolypin, was in accord with him. The first part of the Naval Budget accordingly was voted by the Duma. This was opposed by the Right as an infraction of the Imperial prerogative, and the Right at the same time believing that M. Stolypin would stand by the Duma in this course, at-

tacked him as a Liberal. The Czar refused to sanction this financial vote of the Duma, regarding it as an infringement on his privileges. Hence a ministerial crisis was expected, as it was supposed that M. Stolypin would resign rather than keep the office after such a violation of constitutional principles. On May 11 the Czar refused his resignation, and M. Stolypin decided to retain his portfolio and submit to the action of the government. This greatly damaged his prestige with the liberal element of the Duma, and it did not succeed in winning over the Right, which continued to distrust him. To conciliate the latter, M. Stolypin immediately brought in a proposal, which appealed very strongly to the "Nationalist" sentiment, for the Russification of eastern Poland. The government bill for this purpose turned the eastern part of Poland into a Russian government, to be known as the Department of Kholm. It abolished all Catholic fêtes, prohibited the use of the Polish language in schools and in all social, political and economic institutions, prevented the sale of lands to Poles, and promoted its sale to Russians. The measure was sharply criticised by the Poles. Among the arguments used against it was that it violated the Treaty of Vienna and destroyed the national life of Poland. One of the arguments advanced by the friends of the measure was that it would keep the Ruthenian converts. In the eastern part of Poland there were 304,000 Ruthenians and 310,000 Poles. The Ruthenians were regarded by the Nationalists as Russians, and they had been forcibly converted to Russian Orthodoxy in 1875-6, though for nearly 300 years—that is, since the Union of Brest in 1596—they had been united with the Roman Catholic Church. After the Manifestos of 1905 many of these converts returned to Catholicism. The Russians feared that the number of these Uniates would increase. Hence the stringency of the regulations against Catholic observances.

THE AZEFF CASE. In January it was reported in the newspapers that M. Azeff, chief of the Russian revolutionary socialists, had been cited before the tribunal of the revolutionary party and accused of being in the pay of the police since 1900 as an *agent-provocateur* and responsible for the "terrorist outrages," including the assassination of von Plehve, the Grand Duke Sergius, and the Governor Bogdonovich. It was also alleged at the time of his exposure that he was engaged in a plot against the life of the Czar. As a result of the exposure of Azeff, M. Lopukhin, former director of the police department, was arrested. Much sympathy with him was expressed in the newspapers, and a strict investigation of the charges against him was demanded. He was believed to be a victim of revenge, having, it was said, always opposed the employment of such men as Azeff and the old system of *agents-provocateurs*. In some quarters the arrest of Lopukhin was attributed to the offense which he had caused the government by his memorandum to the first Duma, referring to the methods pursued in the pogroms. When the matter came up in the Duma on February 24, the Premier declared that the government would prosecute vigorously any agents who committed crimes, but that it had no evidence that Azeff was guilty of criminal acts. Later, after a debate on the Azeff affair, the Duma voted confidence in the government's

course. The trial of Lopukhin began on May 11. The charge against him was that he had communicated to the terrorists confidential information in regard to Azeff, that he was implicated in seditious movements, and that he had committed treasonable acts. Lopukhin, on his own behalf, said that he had suspected Azeff of double-dealing, and when he heard of his plan to murder the Czar, he thought it his duty to unmask him. The sentence was five years penal servitude, but it was afterwards commuted to Siberia. The methods pursued by the government in the trial were generally criticised.

OTHER MATTERS BEFORE THE DUMA. Before the prorogation of the Duma on January 2 to February 2, Professor Milyukoff introduced a resolution against the infliction of the death penalty. This arose from the death sentence imposed on thirty-two workingmen for having taken part in a railway strike three years before. The Right made violent speeches against the motion. On its rejection the entire opposition left the House. Subsequently the condemned workmen were reprieved by the Czar. In March a debate arose in the Duma on an interpellation of the government as to the alleged illegal emission of bonds by private railways guaranteed by the government. But the discussion was cut off by the Finance Minister's appeal to the special authority of the Czar in the matter, and by his assertion that the Duma had no right to interfere with the affairs of railways guaranteed by the government. The Right offered a petition to the Minister of Justice, asking for proceedings against M. Markoff for disrespect to the autocracy, but received the reply that the laws did not justify such proceedings. Markoff then petitioned the president of the Duma for a formal charge of lese-majesty. At the end of March the Ministry of Commerce submitted a project of tariff revision to the Duma for the purpose of increasing the exportation of Russian goods. The debate on the navy estimates began on March 30. The credit for the new battleships was rejected. A debate occurred in the Duma at the close of March on the subject of the Poles, in the course of which Professor Milyukoff, the leader of the Constitutional Democrats, and others protested against the insulting language employed by the Minister of Justice in his refusal to appoint Poles as judges in Poland. Early in the following month, the Octobrist motion for restriction of the death sentence by court martial was carried against the votes of the Right, by the aid of the Constitutional Democrats. The debate on conscription occurred in May, the Extreme Right accusing the Jews of evading the law. During the past year out of 84,000 Jews, 26,098 failed to obey the conscription summons. The attitude of the Jews in this matter was explained by some as due to their inequality before the law. A question arose in May from the proposal of the Extreme Right to change the electoral laws in the southwestern provinces so as to prevent the election of Polish landholders to the upper house. But the Premier advised a compromise measure whereby the elections in those provinces were deferred for a year. Toward the end of June the measure passed the Council of the Empire. Its provisions were wholly for the advantage of the Russian element and to the detriment of the Poles. The bill concerning the status of eastern Poland was referred to a committee at the beginning

of June, in spite of the Poles' demand for immediate rejection. In the week ending June 12, the budget for 1909 was adopted. At the same time the bill for religious freedom reached its third reading. Parliament was prorogued on June 15, and reassembled on October 23.

FINLAND. On February 18, the Finnish Diet was assembled, but it was dissolved a week later on account of the Speaker's reference to grievances in his reply to the Czar's opening address (see FINLAND, paragraph on *History*). In April a dispute arose between the Senate and the Imperial government in regard to a constitutional question, the Czar having implied that a measure ought not to have been referred to him because it was passed by the Diet which was afterwards dissolved, and the Senate having protested against this view as violative of Finnish law. As a result, the vice-president of the Finnish Senate and four Senators resigned their seats. The chief issue, however, was the demand of the Imperial government that bills affecting the Imperial interests should be submitted in advance to the joint consideration of the Secretary of State for Finland and the Council of Ministers. This and other constitutional questions were referred to the Russo-Finnish Commission, whose appointment was announced early in August. Its membership consisted of five Russians, five Finns and a Russian chairman, and its programme included the drafting of proposals for the regulation of the issuance of laws of general Imperial interest concerning Finland. On October 14 an Imperial rescript was issued, transferring from the Finnish Diet to the Imperial Legislature legislation as to military service, and in the meantime requiring Finland to pay an annual contribution into the Imperial treasury. On November 17 the Diet, after an all-night session, refused to accept this measure, and on the following day it was dissolved by the Czar's order. The new elections were to be held on February 1, 1910. Meanwhile the Russo-Finnish Commission had failed to agree, and there seemed little chance of reconciling the demand of Finland on the one hand for a separate army and legislative independence with the Russian insistence on the subordination of Finnish affairs to the Duma and on the reduction of autonomy. It closed its session with a vote of the Russian majority for reducing the Finnish Constitution to the status of provincial autonomy. The Finnish members feared the establishment of a military dictatorship would follow.

THE CZAR'S VISITS. The Czar, during a cruise on the Imperial yacht, met the Emperor William at Björkö, on June 17. On this occasion a British vessel was fired upon by a Russian destroyer because, through an error on the part of its pilot, it went too near the Czar's yacht. The shot did some injury to the steamer and wounded a fireman. The usual cordialities expressed between the two monarchs were not regarded as likely to modify Russian foreign policy. On June 26 the Czar and Czarina visited Stockholm. At the end of July the Czar, on board the Imperial yacht, was met at Cherbourg by the President of the French Republic, and on August 2 passed the English coast, where a cordial welcome was accorded to the Imperial visitor by King Edward. An immense naval review was held, banquets were given, and many cordial speeches interchanged (see GREAT BRITAIN, paragraphs on *History*). The Czar

was accompanied by his Foreign Minister, M. Isvolsky, who referred to the friendly relations between England and Russia, but declared that they were in no wise incompatible with the best relations with Germany, or any other country. In September the Czar visited the Crimea, where he was received with marks of popular favor. In October occurred the meeting with the King of Italy at Racconigi (see ITALY, paragraphs on *History*).

OTHER EVENTS. During 1908 the number of executions were reported at 782 as against 627 in the previous year. In January a number of St. Petersburg papers were fined for repeating the reports in foreign journals that the Russian police were responsible for terrorist outrages. M. Shipoff, who had resigned his position as Minister of Commerce, was succeeded in January by M. Timiriazeff, who was succeeded in turn in November by M. Timasheff, the governor of the State Bank. In February the Procurator, M. P. Isvolsky, resigned, and was succeeded by M. Lukianoff, who was professedly more conservative in policy. At the St. Petersburg conference on the coast trade in the Far East it was resolved that after October 14, 1909, steam traffic under foreign flags should be abolished, but that the Governor-General of the Amur Territory might permit, until October 14, 1913, a few foreign vessels to make single trips, and until that date the sailing trade might continue along the coast to Korea as far as Olga Bay. The Russo-British Chamber of Commerce held its first meeting on March 20. This institution promised to be successful in its object of promoting commercial friendship between the two countries. It invited the London and other English Chambers of Commerce to visit St. Petersburg on October 26. An arrangement was made by the London and St. Petersburg Chamber of Commerce for the holding of a Russian exhibition in London in 1911. In April the Gogol centenary was celebrated. In May General Stoessel and Admiral Nebogatoff were released from the fortress in which they had been confined. On June 24 a deputation from the Duma, including the president, M. Homiakoff, the leader of the Octobrists, M. Goutchkoff, and the leader of the Constitutional Democrats, Professor Milyukoff, visited London at the invitation of a committee, with the approval of the governments of both countries. They were hospitably entertained in London, Liverpool, Edinburgh and Oxford, and their visit did much to clarify public opinion in England as to the situation in Russia. On July 23 a local military tribunal passed sentence on a number of persons who were accused of belonging to a revolutionary society in the Government of Kursk. It condemned nine to death, including one member of the second Duma, twenty-five to penal servitude, including a member of the first Duma, and thirty-four to imprisonment in a settlement. It acquitted twenty. In the autumn of 1909, the rule as to the admission of the Jews to the Russian universities was rigidly enforced by the administration of the Duma. The rule fixed, on the basis of their proportion to the total population, the number of Jewish candidates at 3 per cent., but it had not been strictly regarded and a larger percentage of Jews had been admitted. Under M. Schwarz as Minister of Education, the administration became more strict, and in the autumn of 1908, the Council of Ministers decided upon the strict enforcement of the 3 per

cent. limitation; but the courses had already begun, and it was not until the autumn of 1909 that the rule went into complete effect. The universities construed the rule in a liberal spirit as applying not to the total number of Jews in the university, but to the number of admissions, and the University of Moscow admitted 60 Jews, although the number of Jews in the University was 5 per cent. The Minister immediately issued a circular insisting on the application of the rule to the University total. So the 60 applicants were refused and could not, according to the law of the pale, even remain in the city.

Rich deposits of copper and coal were reported to have been found in the Khirgiz steppe region, at the end of August. On October 15, the Finance Minister, M. Kokovtsoff, in his speech reviewing the state of the finances, said that there would be no new tax, that credit had been improved, that the value of securities had risen 21 and in some cases 23 per cent., and that the only new duty was that on cigarettes. The bi-centennial of the battle of Pultowa was celebrated on July 10 by a parade at Pultowa, and monuments were unveiled in many of the cities. On July 9 the foundation stone of Peter Bridge was laid. The plan for the new railway in the Caucasus was being pushed through, and the London market responded readily with subscriptions. It was decided that four *Dreadnoughts* should be laid down on June 17. They were to be built by British engineers. An important sanitary programme was undertaken in St. Petersburg in June, involving a system of drainage under a government special commission, at a cost estimated at 100,000,000 rubles. On December 22, Colonel Karpoff, Chief of the Secret Police of St. Petersburg, was killed by a bomb at a suburban lodging house, occupied by a man named Voskresensky. The latter was captured by the police, who also made a number of other arrests. The crime was supposed to have been the outcome of the revolutionary movement. For information concerning Russia's foreign relations, see articles AUSTRIA-HUNGARY, BALKAN QUESTION, CRETE, GREAT BRITAIN, ITALY, AND TURKEY, paragraphs on *History*.

RUSSIAN ORTHODOX CHURCH. See GREEK CHURCH.

RUTGERS COLLEGE. An institution of higher learning at New Brunswick, N. J., founded in 1766. The attendance in 1909 was about 400 students, with 42 members of the faculty. There were in the library 59,189 volumes. During the year special gifts were received to the amount of about \$50,000. During the year William I. Chamberlain, professor of mental philosophy and logic, resigned, and his position was filled for the year by Walter T. Marvin of Princeton University. An engineering building has been erected at a cost of \$75,000 and equipped at a cost of \$20,000. During 1909 a chemistry building was being erected at a cost of \$60,000. The productive funds of the college amount to about \$740,000. The president is W. H. S. Demarest, D. D.

RYE. The growing season of 1909 was well suited to the development of the rye crop and the favorable weather after May 1 had an especially good effect. The rye crop is not well distributed over the United States and can be regarded as a staple crop only in Michigan,

Wisconsin, Minnesota, New Jersey, New York and Pennsylvania, where it seems to have a more or less permanent place in the crop rotations, especially in the three States last mentioned. A reduction in the yield of this year was mainly caused by continued hot and dry weather in Pennsylvania, which made a short crop in that State.

The rye crop of 1909, according to the Bureau of Statistics of the United States Department of Agriculture, amounted to 32,239,000 bushels produced on 2,006,000 acres. In 1908 the corresponding figures were 31,851,000 and 1,948,000, respectively. The total value in 1909 was \$23,809,000. This year's total production ranks third among the crops since 1866, and the total value second, being the highest since 1891. In only 8 States did the crop of 1909 exceed a million bushels. The leading State, Pennsylvania, produced 5,508,000 bushels on 360,000 acres; Michigan, 5,425,000 bushels on 350,000 acres; Wisconsin, 4,727,000 bushels on 290,000 acres; New York, 2,720,000 bushels on 160,000 acres; Minnesota, 2,280,000 bushels on 120,000 acres; Nebraska, 1,320,000 bushels on 80,000 acres; New Jersey, 1,288,000 bushels on 79,000 acres, and Illinois, 1,264,000 bushels on 71,000 acres. In the Southern and the Western States comparatively little rye is grown. California, however, has an annual production of about 800,000 bushels.

The world's rye production for this year is estimated at 24 million bushels greater than in 1908, when it amounted to 1,587,083,000 bushels. Russia is the leading rye-producing country of the world, and the Russian crop for 1909 is estimated at more than 700,000,000 bushels. Germany, which ranks next to Russia, produced about 425,000,000 bushels on an area of 15,145,000 acres. All of this acreage, except about 250,000 acres, was winter rye. Austria-Hungary, which usually ranks third, is said to have yielded about 150,000,000 bushels. France produced, according to estimates, 60,580,000 bushels on 3,067,000 acres.

Rye grows with fair success in high northern agricultural latitudes and is giving good promise in parts of Alaska, where cultural tests have been made by the experiment stations. It also seems quite drought-resistant, and quite fair yields have been secured in dry regions with dry-farming methods. The rye acreage for 1910 is 1.2 per cent. larger than that of 1909 and the condition of fall growth is very good.

SAGE FOUNDATION. See CHARITY ORGANIZATION.

ST. ANDREW, BROTHERHOOD OF. An organization of the Protestant Episcopal Church, established for the spread of religious faith among young men. The 24th annual convention was held in Providence, R. I., October 13-17, with an attendance of about 1000 delegates. During the year many important State conventions were held, as well as several large district conventions, including the tri-diocesan convention at Washington. The Brotherhood numbers 825 senior chapters and 525 junior chapters. The total number of members, senior and junior, is about 14,000. The officers in 1907 were: Robert H. Gardner, President; H. T. W. English, First Vice-President; Hubert Carleton, General Secretary; George H. Randall, Associate Secretary, and Francis M. Adams, Treasurer. The official organ of the Brotherhood is *St. Andrew's Cross*.

ST. HELENA. An island of volcanic origin in the South Atlantic, 800 miles southeast of Ascension, the nearest land; a British possession. Area, 47 square miles; population (1907), 3748; 1908, 3558. The capital and port, Jamestown, with 1439 inhabitants, is an Imperial coaling station. The opening of the Suez Canal has diverted shipping from the island—once an important station on the route to India. Fishing and agriculture thrive, and flax cultivation and lace-making were established under government control in 1907. Imports, 1907, £35,000 (Great Britain, £32,000); 1908, £36,218 (Great Britain, £34,175). Exports, 1907, £4704 (Great Britain, £4598); 1908, £6685 (Great Britain, £5537). Revenue and expenditure, 1907, £7207 and £8057; 1908, £7432 and £8104. There is no debt. Governor (1909), Lieutenant-Colonel Henry Lionel Gallwey.

ST. KITTS, OR ST. CHRISTOPHER. An island which, with Nevis and Anguilla, forms a presidency of the Leeward Islands (q. v.); a British possession. Area (St. Kitts 65 square miles, Nevis 50, Anguilla 35), 150 square miles. Population (1901), 46,451 (St. Kitts 29,782, Nevis 12,774, Anguilla 3890); 1908, 49,289. Capital, Basseterre, with 9962 inhabitants. Products and exports, sugar and sugar products, salt, phosphate of lime, and cattle. Imports and exports (1907), £158,818 and £319,013, respectively; revenue, £49,336; expenditure, £47,170. Administrator (1909), T. L. Roxburgh.

ST. LUCIA. An island of the Windward Islands (q. v.), belonging to Great Britain. Area, 233 square miles; population (December 31, 1907), 54,599. The capital, Castries (7757 inhabitants), has one of the best harbors in the West Indies and is the chief coaling station for the fleet there. The whites are mostly French Creoles; the Roman Catholic is the prevailing religion, and the law is based on old French codes. Sugar (4982 tons in 1908), rum (23,440 gallons), cacao (1,355,000 pounds), and spices are the chief exports. Imports and exports were valued in 1908-9 at £289,775 and £252,668, respectively, against £310,309 and £264,401 in 1907-8. Revenue and expenditure for 1908-9 amounted to £65,694 and £65,038, respectively; the public debt stood at the end of the fiscal year at £151,030. Administrator and Colonial Secretary (1909), Edward John Cameron.

ST. PIERRE AND MIQUELON. The largest islands of two small groups which constitute a French colony off the south coast of Newfoundland. Capital, St. Pierre. Total area, 93 square miles; population (1902), 6482, of whom a number have since emigrated to Canada. There are six free public and three private schools, with 631 pupils. The islands are mostly barren rock. Fishing is the chief industry. In 1907 there were 71 boats of 3294 tons, and 1281 men, engaged in the cod fisheries. Imports (1907), 5,031,936 francs (France, 2,637,568); exports, 7,255,930 (France, 6,378,000), of which 5,416,093 francs represented the fishery products. St. Pierre has steamship communication with Boston and Halifax, and telegraph cables to Europe and to the American continent. There were 4 post-offices in 1907. The local budget for 1908 balanced at 476,305 francs; the expenditure of

France, according to the budget of 1909, was 204,220 francs. The outstanding debt, January 1, 1907, amounted to 478,404 francs. In 1907, 1732 vessels of 109,946 tons entered, and 1750 of 106,860 tons cleared at the islands. The colony is governed by an administrator, assisted by a consultative council of administration and municipal councils.

ST. THOMÉ OR SAN THOMÉ AND PRINCIPE. See SÃO THOMÉ AND PRÍNCIPE.

ST. VINCENT. An island of the Windward Islands (q. v.), belonging to Great Britain. Part of the Grenadine Islands are administered under St. Vincent. Area, 140 square miles; estimated population (1909), 52,592, about three-fourths negroes. Capital, Kingstown, with (1901) 4747 inhabitants. Sugar and sugar products, arrowroot, cassava, cacao, coffee, cotton, and spices are chief products and exports. Imports and exports (1908-09), £113,713 and £54,444, respectively. Revenues and expenditure (1908-9), £31,395 and £27,200. Administrator, Colonial Secretary, and Treasurer (1909), C. Gideon Murray.

SAKHALIN (KARAFUTO). An island off the eastern coast of Siberia. Formerly the entire island was Russian, but that part of it south of the 50th parallel was ceded to Japan by the Treaty of Portsmouth, September 5, 1905. Russian Sakhalin has an area of about 16,370 square miles and upwards of 12,000 inhabitants. It is no longer used as a penal colony. It possesses enormous coniferous forests, extensive beds of an inferior grade of coal, and valuable petroleum deposits. The exploitation of the latter has begun. Japanese Sakhalin has an area of about 12,489 square miles and a population (1908) of 26,392 (Japanese, 24,106). There are valuable and extensive forests, but at present the fisheries are the most important source of wealth. The budget for 1909-10 balanced at 1,868,190 yen, the larger part being contributed by Japan.

SALTING, GEORGE. An English art collector, died December 12, 1909. He was born in Australia in 1836. His father had there large sugar estates and sheep farms, the great wealth derived from which came to his sons. He was educated at Eton and the University of Sydney. In early life he went to England to reside, and began a collection of pictures and objects of art. He became an expert in Chinese porcelains and accumulated a fine collection of porcelains and other treasures of Oriental art from the old Dutch houses in Holland. His Oriental collections were surpassed only by those of J. Pierpont Morgan and possibly by the royal collections in Dresden. They were for twenty years loaned to the Museum in South Kensington. After amassing this collection, as well as a fine assortment of English furniture, he began buying in Paris, spending \$200,000 at the famous Spitzer sale of Renaissance objects of art. After this he turned his attention to pictures, of which he gradually acquired a good knowledge. He formed a fine collection of Dutch pictures, an interesting gathering of Italian masters, and a large and valuable assortment of drawings and miniatures. He was undoubtedly the greatest English art collector of this age and perhaps of any age. He was somewhat eccentric in his personal habits and lived very modestly in London. His collections were left to the nation.

SALTO RO PASS. See EXPLORATION.

SALTS, AQUEOUS SOLUTION OF. See CHEMISTRY.

SALVADOR. A Central American republic, on the Pacific coast, south of Guatemala and Honduras. The capital is San Salvador.

AREA AND POPULATION. The area of the 14 departments constituting the republic is about 7225 square miles. The population in 1906 was placed at 1,116,253, of whom 772,200 were mestizos and 234,848 Indians. San Salvador had 59,136 inhabitants in 1905. Other towns, with population in 1901, are: Santa Ana, 48,120; San Miguel, 24,768; Nueva San Salvador, 18,770; San Vicente, 17,832; Sonsonate, 17,016. Primary instruction is free and compulsory. A decree of September 13, 1909, provides for the standardizing of primary instruction in the public schools. There are about 600 primary schools, which in 1907 had 34,752 pupils enrolled and an average attendance of 24.713. There are over 20 higher schools, including three normal and three technical schools, and a national university.

PRODUCTION. The people are principally engaged in agriculture. The chief crop is coffee, of which the annual production amounts to some 37,500 tons. Other products are cacao, tobacco, indigo, rubber, Peruvian balsam, sugar, and bananas. The forests yield mahogany and other cabinet woods, dyewoods, balsams, gums, and resins. Various valuable mineral deposits occur, including gold, silver, copper, lead, and iron, but mining is chiefly confined to gold and silver. There is a little exploitation of copper, iron, and lead. The manufacturing industries, which are small, produce fibre ropes and hammocks, cigars and cigarettes, palm-leaf mats and hats, saddlery, confectionery, alcohol, and some silk and cotton textiles.

COMMERCE. Imports and exports in 1907 were valued at \$3,440,721 and \$6,065,384, respectively; in 1908, \$4,240,580 and \$5,787,677, respectively. The principal articles of import are cotton textiles, hardware, flour, drugs and medicines, boots and shoes, and silk and woolen goods. The leading exports in 1908 were: Coffee, 55,215,110 pounds, valued at \$3,899,430; mining products (chiefly gold), \$1,235,831; sugar, 7,042,178 pounds, valued at \$251,077; indigo, 421,350 pounds, \$197,036; balsam, 143,678 pounds, \$77,474. Other exports included hides, tobacco, rubber, and rice. In order of importance, the leading countries of origin for imports were, in 1908, Great Britain, the United States, Germany, France, Italy, Belgium, and Honduras. The leading countries of destination of the exports were: The United States, \$1,984,000; Germany, \$993,221; France, \$971,813; Great Britain, \$429,003. Imports from the United States in 1908 were valued at \$1,404,573. The exports to the United States included: Gold bullion, \$822,181; other gold and silver, \$387,902; sugar, \$26,680; rubber, \$10,595.

COMMUNICATIONS. The railway in operation amounts to about 100 miles. There is a line from San Salvador to the port of Acajutla, with branch connection to the city of Santa Ana, and another line connects San Salvador with Santa Tecla. A contract has been made for a railway from Santa Ana to the Guatemalan frontier, there to connect with the Guatemalan section of the Pan-American Railway.

Other lines are projected. The highways of the country, extending over 2000 miles, are kept in comparatively good condition. There are reported 85 post-offices, and 188 telegraph offices, with 2800 miles of wire. The telephone lines aggregate about 2000 miles.

FINANCE. The silver peso is worth from 36.5 to 37.5 cents. For 1907 the net revenue was reported at 8,869,189 pesos, and the expenditure, 10,620,846 pesos; for 1908, net revenue, 10,676,339 pesos (gross revenue, 12,788,277 pesos), and the expenditure, 12,210,993 pesos. For 1909 the estimated revenue and expenditure (including receipts of and expenditure from proceeds of a £1,000,000 loan) were 18,131,400 pesos and 18,308,564 pesos, respectively. The estimated revenue for 1910 was 11,007,000 pesos, and the estimated expenditure, 11,063,400 pesos. The chief sources of revenue are import and export duties and liquor taxes. The principal items of expenditure are for the public debt, war, and internal administration. At the beginning of 1909 the public debt amounted to 30,088,494 pesos.

GOVERNMENT. The executive authority is vested in a president, who is elected by popular vote for a term of four years, and is assisted by a cabinet of four members responsible to the National Assembly. The legislative power rests with this body, which is unicameral and is composed of 42 members elected annually. The President in 1909 was General Fernando Figueiroa, who was inaugurated March 1, 1907. See **ARBITRATION, INTERNATIONAL.**

SALVATION ARMY. A religious body founded on military principles by William Booth in 1878, although as a Christian Mission it had existed in London since 1865. The corps and outposts of the Army in the United States in 1909 numbered 886. The indoor attendance at its meetings was 9,392,491 and the open-air attendance 1,613,002. The local officers and bandsmen numbered 5494. There were 55,422 junior meetings held, with an attendance of 1,580,522. The relief institutions for the poor include 107 industrial homes, to which in 1909 12,104 men were admitted; 79 workingmen's hotels with shelter accommodation for 7704; 23 slum posts, by which 2130 sick cases, and 27,761 families were visited during the year; 26 rescue homes, to which 1533 women and 1042 children were admitted; a bureau for missing friends, through which 206 persons were found during the year, and three colonies, embracing 2589 acres of land, in which were 399 persons. The Army distributed 19,778 Thanksgiving dinners, and 383,500 Christmas dinners (Thanksgiving and Christmas, 1908). It afforded temporary relief to persons outside industrial homes and hotels numbering 173,056 during the year. Summer outings were given to 4751 mothers and 35,949 children. Commander Miss Evangeline Booth is in charge of the work, with Colonel William Peart as chief secretary.

SAMOA, or SAMOAN ISLANDS. A group of islands in the Pacific about 2800 miles southwest of Hawaii and 1800 miles northeast of New Zealand. They belong partly to Germany and partly to the United States. See the article **GERMAN SAMOA**. In March signs of discontent under German control led to the dispatch of three German war vessels from the Eastern Asiatic Squadron, and early in the

following month it was announced that the ringleaders had been captured without fighting and that the squadron would make a tour of the islands for the restoration of order. By the middle of April it appeared that order was restored. In the meanwhile the subject had come up in the Reichstag, where the government was criticised for too great confidence in the good will of the natives, and complaints were made that arms were not given to the German settlers. Herr Dernburg, Colonial Secretary, denied these charges, saying that Germany would soon be in full control. He declared on this occasion that the English and Americans had found Samoa a hard problem to deal with and that they regarded themselves as under the protection of German suzerainty.

SAMOS. One of the Anatolian Islands; a more or less independent principality of the Ottoman Empire (under the guarantee of Great Britain, France, and Russia). Area, 181 square miles; population, 53,424. The capital, Vathy (population about 25,000), has a good harbor. The island is fertile throughout; wine, raisins, olive-oil, and tobacco are the chief products and exports. Antimony, silver and lead, manganese, emery, and copper occur. Imports and exports were valued (1908) at 26,301,920 and 24,774,004 piasters (1 piaster=4.4 cents), respectively (wine export, 10,099,000 piasters; cigarettes, 3,048,000). Navigation (1908), 1294 steamers of 435,616 tons and 2964 sailing vessels of 28,520 tons. The revenue for 1908 was estimated at 3,716,968 piasters (direct taxes, 1,215,500; indirect taxes, 2,415,000); expenditure, 3,664,886 (Interior, 1,424,351; Public Safety, 559,180; Instruction, 511,920; Justice, 420,460; tribute to Turkey, 216,800). The administration is in the hands of a Greek prince, appointed by the Porte, with a senate of four members and a representative chamber of 40 deputies. The Prince-Governor in 1909 was André Kopassis Effendi, born 1856, appointed December, 1907.

SANCHÁ Y HERVAS, CYRIACUS MARY, CARDINAL. Archbishop of Toledo and Primate of Spain, died on February 25, 1909. He was born at Quintana del Pidio, Spain, on July 17, 1838. He was created cardinal May 18, 1894. Cardinal Sancha represented Spain in the Eucharistic Congress in London, in 1908.

SANDERSON, JOHN H. An American contractor, died May 13, 1909. He was convicted of defrauding the State of Pennsylvania in the furnishing of the new State Capitol at Harrisburg, on May 13, 1908. It was alleged by investigators that Sanderson had received payments of \$6,434,748 for work that cost only \$1,574,399 to do. He was sentenced to two years in the State penitentiary, but was out on bail pending an appeal, when he died. See **PENNSYLVANIA**.

SANFORD, EDMUND CLARK. An American psychologist and educator, elected on September 22, 1909, president of Clark College, to succeed the late Carroll D. Wright. He was born in Oakland, Cal., in 1859, and graduated from the University of California in 1883. From 1883 to 1885 he taught in Oahu College, Honolulu, and in 1887-8 was instructor in psychology in Johns Hopkins University. He was appointed instructor of psychology in Clark College in 1889, assistant professor in 1892, and full professor in 1900. Since 1895 he has been joint

editor of the *American Journal of Psychology*. In 1902 he was president of the American Psychological Association. Among his published works are *A Course in Experimental Psychology* (1898), and numerous papers on psychological subjects in the *American Journal of Psychology*.

SANITATION. The movement for a national bureau of health for the United States gained in strength during 1909, but nothing definite was accomplished. President Taft, in his message to Congress in December, urged the consolidation, in a single bureau, of the various national health activities now carried on by several government departments. The British Parliament enacted a Housing and Town Planning bill, which comprised, also, a requirement for the appointment of paid full-time county medical officers of health, to supervise health affairs in counties, including a general control of district health officers. The bill extended to the smaller towns and rural districts the right, and in certain cases the duty, of providing dwellings, at public expense, for rental to the so-called working classes. The Town Planning clauses of the bill are designed to improve the sanitary, economic and aesthetic conditions of city life, particularly in additions to the built-up areas of cities and towns. The central administrative control of the British Local Government Board over local sanitary conditions was increased by the bill.

Improvements in State and municipal health administration in the United States continued during the year, particularly as regards water and milk supplies, attempts to control the spread of communicable diseases, and reforms in local health board organization and equipment. See also GARBAGE AND REFUSE DISPOSAL, SEWAGE PURIFICATION, SEWERAGE, STREET CLEANING, WATER PURIFICATION, AND WATER WORKS.

SANTO DOMINGO, or DOMINICAN REPUBLIC. A West Indian republic, occupying the eastern and larger portion of the island of Haiti. The capital is Santo Domingo.

AREA AND POPULATION. The estimated area of the six provinces and six districts constituting the republic is about 18,045 square miles. The estimated population is 610,000, mostly of mixed Spanish and African blood. The prevailing language is Spanish. The principal towns, with estimated population, are: Santo Domingo, 20,000; Puerto Plata (the chief port) and Macoris, about 15,000 each; Santiago, 12,000. Instruction in primary schools is free and nominally compulsory. The state also maintains superior, normal, and technical schools, and a professional school. The estimated number of schools is about 300, with about 10,000 pupils. The state religion is Roman Catholicism, but other religious forms are tolerated.

PRODUCTION. The inhabitants of Santo Domingo are engaged chiefly in agriculture, although farming methods are for the most part primitive. Recently the government has undertaken to foster and develop the agricultural and live-stock industries. The leading crops are cacao, sugar, tobacco, coffee, and bananas. The forests contain many valuable woods, as mahogany, lignum-vitæ, satinwood, etc., and these have had considerable exploitation. There are large quantities also of excellent building woods, and it is estimated that there are be-

tween 1,000,000 and 1,500,000 acres of merchantable pine in the country; nevertheless, a large part of the lumber used for building purposes is imported. The mineral resources include gold, iron in large quantities, copper, coal (including anthracite), petroleum, nickel, silver, mercury, asbestos, and salt. Salt is produced, some copper is mined, and the exploitation of petroleum has been begun; otherwise the development of the mineral wealth of the country is negligible.

COMMERCE, ETC. Imports and exports have been valued as follows:

	1906	1907	1908
Imports.....	\$4,281,337	\$5,156,121	\$5,127,463
Exports.....	6,543,872	7,638,536	9,486,344

The leading imports in 1908 were: Cotton manufactures, \$1,186,551, of which the United States and Great Britain furnished \$504,646 and \$466,031, respectively; iron and steel manufactures, \$605,246 (\$386,994 from the United States); rice, \$360,728; flour and other foodstuffs. The chief exports in 1908 were: Cacao, 41,903,470 pounds, valued at \$4,269,047 (about two-thirds to Germany); sugar, 69,703 tons, valued at \$3,092,429; tobacco, 18,665,594 pounds, \$1,009,608; coffee, \$325,153; bananas, 454,010 bunches, \$234,002. Other exports, shipped in small consignments, were dyes, livestock, hides and skins, cocoanuts, copra, gums and resins, honey, wax, vegetable fibres, and woods. The imports to and the exports from Santo Domingo by countries were as follows in 1908:

Countries	Imports	Exports
United States	\$2,891,722	\$4,212,449
Germany	868,230	4,220,289
Great Britain	788,621	...
France	212,002	907,898
Spain	123,194	339
Italy	116,428	13,268
Other Countries	127,266	132,101

In 1908 the total entries of vessels in the foreign trade numbered 752 (206 sailing), of 849,687 tons; clearances, 712 (201 sailing), of 781,169 tons. There are about 130 miles of railway, and over 430 miles of telegraph line.

FINANCE. Revenue and expenditure are reported as follows, for fiscal years:

	1906	1907	1908
Revenue.....	\$3,826,679	\$3,964,632	\$4,175,033
Expenditure...	2,057,696	2,355,481

The revenue is derived chiefly from customs, which amounted in 1906 to \$3,082,074; in 1907, \$3,314,119; in 1908, \$3,232,890. An American citizen is temporarily general receiver of customs under a treaty between the United States and the Dominican Republic, in virtue of which (since April, 1905) 55 per cent. of the customs revenue (less expenses of collection) are deposited, in New York, in trust for all the national creditors. Pursuant to the treaty a loan was issued amounting to \$20,000,000, guaranteed by the import and export duties. In 1909 the finances were in a prosperous condition, the republic carrying in New York on January 1 a credit balance of \$6,616,850 in

bonds and \$947,973 in cash. The estimated expenditure for 1908 was \$3,984,300; for 1909 the estimated revenue and expenditure balanced at \$4,024,230. On May 28, 1909, the Congress passed a law prescribing that obligations originating prior to July 1, 1904, should be presented to the Finance Department for examination and settlement before January 1, 1910, and if not presented before that time would be considered lapsed. The standard of value in the Dominican Republic is the United States gold dollar.

GOVERNMENT. Under the present Constitution, proclaimed April 1, 1908, the executive authority is vested in the President assisted by a cabinet of seven members. The President is elected by indirect vote for a term of six years. The legislative power devolves upon the National Congress of two houses, the Senate (12 members) and the Chamber of Deputies (24 members). The President in 1909 was Ramón Cáceres, who was installed in 1906 to complete his predecessor's term of office, and was inaugurated for a full term on July 1, 1908.

SÃO THOMÉ AND PRÍNCIPE. Two islands in the Atlantic off the coast of French Congo, constituting a Portuguese dependency. Total area, about 360 square miles; population (census of November 12, 1900), 42,103 (37,778 in São Thomé and 4327 in Príncipe). Negroes numbered 40,839. The principal commercial products are coffee, rubber, cinchona, and cacao, of the last named the islands being one of the world's important sources. The exports of cacao to Lisbon in 1907 amounted to 402,221 bags of 132 pounds each; in 1908, 477,175 bags. The reexports from Lisbon to the United States in 1908 were 91,869 bags, or about one-eighth of the total American import. In 1906 the total imports and exports of the dependency were valued at 2,315,005 milreis and 8,790,620 milreis, respectively. For the fiscal year 1908-9, the estimated revenue and expenditure were 721,210 milreis and 618,588 milreis, respectively. See PORTUGUESE AFRICA.

SARAWAK. A British protectorate on the west coast of Borneo. Area, about 50,000 square miles; population, 500,000 (Malays, Dyaks, Kayans, Kenyahs, Chinese, etc.). Capital, Kuching. Sago, gutta-percha, rubber, beeswax, bird's-nests, tobacco, rice, rattans, pepper, and gambies are produced. Coal in great quantities is present, as well as gold, silver, diamonds, antimony, and quicksilver. Total imports and exports (1908), 4,467,988 and 5,732,733 dollars (Mexican), respectively (gold export, 1,130,760 dollars). The revenue (derived chiefly from opium, gambling, arrack, Malay exemption tax, etc.) in 1908 was 1,259,482 dollars, and the expenditures amounted to 1,243,643, against 1,441,194 and 1,359,273 in 1907. The present Rajah, Sir Charles Johnson Brooke, was born June 3, 1829, and succeeded his uncle, Sir James Brooke, in 1868.

SASKATCHEWAN. A province of Canada. Area, 250,650 square miles. Population (1906), 257,763. The capital is Regina, with 6169 inhabitants in 1906. The executive power is exercised by a lieutenant-governor, appointed by the Governor-General of Canada and acting through a responsible Executive Council. There is a unicameral Legislative Assembly of 41 elec-

tive members. The Lieutenant-Governor in 1909 (from September, 1905) was Amedée Emmanuel Forget; the Premier, Walter Scott. For statistics and other details, see CANADA.

SATURN. See ASTRONOMY.

SAVINGS BANKS. According to the report of the Comptroller of the Currency the number of savings banks in the United States on April 28, 1909, was 1703, as compared with 1453 in 1908 and 1002 in 1900. There were a total of 8,831,864 depositors, or about one in ten inhabitants, as compared with 6,107,083 depositors or about one in twelve inhabitants in 1900. The aggregate deposits were \$3,713,405,709, as compared with \$2,449,547,000 in 1900. The average amount due each depositor in 1909 was \$420.45; and the average deposit per capita total population was \$41.75, as compared with \$31.78 in 1900. Moreover, the 1909 statistics were exclusive of 339 State banks and trust companies in Illinois with \$204,908,505 savings deposits credited to 641,634 depositors. The aggregate resources of the 1703 savings banks were \$4,072,710,000; loans, including mortgages owned, amounted to \$2,033,288,000, and bonds to \$1,713,271,000. The magnitude of these figures is shown by the fact that the aggregate resources were equal to over 40 per cent. of the aggregate resources of the 7000 national banks on the same date; the loans compare equally well, while the bonds held by savings banks greatly exceeded the bonds and other securities held by all national banks, including United States bonds securing circulation. Savings deposits comprised 26.5 per cent. of all individual deposits in the United States, and equaled 74 per cent. of those in all national banks.

Mutual savings banks numbered 642, all in the New England and Eastern States, except one in West Virginia, 3 in Ohio, 5 in Indiana, 3 in Wisconsin, 10 in Minnesota, and 1 in California. Their aggregate resources comprised almost 85 per cent. of the resources of all savings banks, and their loans 80 per cent., their bonds and other securities, 94 per cent., and their deposits 85 per cent. of those of all savings banks. There were 1,335,256 depositors in mutual savings banks in Manhattan and the Bronx boroughs, New York City, credited with \$743,858,253; 447,768 in those in Brooklyn, with \$210,207,834; 612,516 in those in Boston, with \$208,443,392; and 382,088 in those in Philadelphia, with \$134,403,118. During 1909 mutual savings banks paid interest to the amount of \$114,880,550 on deposits. The average rate of interest paid by all such banks was 3.85 per cent., ranging from 4.5 per cent. in West Virginia to 3.32 per cent. in Pennsylvania.

Stock savings banks making reports numbered 1061, of which 590 were in Iowa, 152 in California and 181 in the Southern States. They had aggregate resources of \$677,784,000, including loans, \$442,998,000, and securities, \$113,738,000. Deposits amounted to \$568,820,000, of which \$250,000,000 were in the California banks. The average interest paid by stock savings banks was 3.6 per cent.

The table on page 640 from the report of the Comptroller of the Currency shows the condition of all savings banks by States in 1909.

In Massachusetts only two banks have adopted the plan for industrial insurance de-

States, etc.	Number of banks	Number of depositors	1909 (1,703 banks) Amount of deposits	Average to each depositor

partments provided for in the law of 1907. These are at Whitman and Brockton. For the year ending October 31 these two banks issued a total of 3000 policies, of which 2521, involving insurance amounting to \$902,761, were in force at the end of the year. Only one death claim was paid; but in sharp contrast to the usual industrial insurance this claim for \$500 was paid at once in full, although the policy was in force less than six months. A policy of equal cost in one of the large industrial insurance companies would have netted the beneficiary only \$192. Most of the business has come from large industrial concerns that have given the matter personal attention.

SCHOOL SAVINGS BANKS on January 1, 1909, were found in 114 cities in the United States, Canada, and South and West Australia. There were 6765 banks in 1163 schools, with aggregate deposits of \$747,905. The average deposit was

\$3.98. The aggregate deposits in such banks since the beginning of the system was \$4,609,431.

From compilations of the Bureau of Statistics the table on savings banks throughout the world on page 641 was prepared. It includes postal savings banks (q. v.) as well as private. As compared with a table for the same countries at dates two years earlier, this table shows an increase of 8,954,000 in the total number of depositors, and of \$1,339,000,000 in aggregate savings deposits. In this time Germany showed an increase of 1,364,000 in the number of depositors and of \$360,000,000 in savings deposits; Russia, an increase of 1,028,000 depositors, and of \$90,500,000 deposits; and the United Kingdom, an increase of 1,112,000 depositors, and \$37,000,000 deposits. The following countries have the greatest numbers of saving depositors per 1000 of their population: Switzerland, 491; Denmark, 477; New Zealand, 400; Norway, 377;

Country	Date of report	Number depositors	Deposits	Average deposit account	Average deposit per inhabitant
Austria	1906-7	5,856,091	\$1,114,558,951	\$190.82	\$40.53

SCENIC AND HISTORIC PRESERVATION SOCIETY, AMERICAN. A society incorporated in 1895 for the protection of the beauties of natural landscapes from disfigurement; the preservation of geological formation, and the saving from obliteration of all names, places and objects identified with national, State or local history. The society is required to report annually to the New York Legislature, and thus occupies a quasi-official position. It has the custody of five State properties, Stony Point battlefield, Watkins Glen, Letchworth Park, Fort Brewerton and Philipse Manor Hall. The most interesting events in the history of the society during 1909 were connected with the Hudson-Fulton celebration in which it took a leading part. An exhibition, entitled Three Centuries of New York, was held at the National Arts Club under the general auspices of the society and the National Arts Club. The Ft. Tryon monument on Ft. Washington Avenue was dedicated during the year, as was a memorial arch on the Stony Point battlefield, under the joint auspices of the society and the New York City Society of the Daughters of the Revolution. The society had in 1909, 600 mem-

bers. The Honorary President is J. Pierpont Morgan; President, George F. Kunz, and Secretary, Edward Hagaman Hall.

SCHULTZ, ALWIN. A German art critic and historian, died March, 1909. He was born in 1838, and studied archeology and Germanic philology at Breslau, where he established himself as docent for art history in 1866. In 1872 he was appointed professor of art history in that university, and in 1882 was appointed to a similar position at the University of Prague. His most important publications include: *Schlesiens Kultusleben im 13. bis 18. Jahrhundert* (1870-72); *Die Legende vom Leben der Jungfrau Maria und ihre Darstellung in der bildenden Kunst des Mittelalters* (1878); *Das höfische Leben zur Zeit der Minnesinger* (2d ed. 1889); *Kunst und Kunstgeschichte* (2d ed. 1901); *Deutsches Leben im 14. und 15. Jahr-*

hundert (1892); and *Allgemeine Geschichte der bildenden Künste* (1894 et seq.).

SCIENCES, NATIONAL ACADEMY OF. A society organized for the examination and investigation of any subject of science or art, and for making reports at the call of the United States government, the actual expenses of such examination and report to be paid out of the appropriation made for that purpose. It was incorporated by Act of Congress, May 3, 1863. The Academy can, under no circumstances, receive compensation from the government for its services. Annual reports are made each year at the meetings which are held at such places in the United States as may be specially designated. The autumn meeting of 1909 was held at Princeton University, November 16-18. The Academy is composed of members, honorary members and foreign associates. The foreign associates are limited to 50. The officers are elected for six years. In 1909 they were as follows: President, Ira Remsen; Vice-President, Charles D. Walcott; Foreign Secretary, Alexander Agassiz; Home Secretary, Arnold Hague; Treasurer, S. F. Emmons.

SCOTLAND. See GREAT BRITAIN.

SCOTT, GUY CHARLES. An American jurist, died May 24, 1909. He was born in Henderson county, Ill., in 1863, and was educated in the public schools and at Knox College. He was admitted to the bar in 1886. From 1895 to 1899 and from 1901 to 1903, he was Mayor of Eledo, Ill. He was appointed Justice of the Supreme Court of Illinois in 1903, and in 1906-7 was Chief Justice.

SCULPTURE. The greatest achievement to the credit of American sculptors in 1909 was the completion of part of the colossal work for the decoration of the new building of the Brooklyn (N. Y.) Institute of Arts and Sciences. The plans of the architects, Messrs. McKim, Mead and White, provided a number of quadrants to be adorned on the outside of the building with statuary. Professor Franklin W. Hooper, in consultation with Daniel C. French, decided upon eighty-six statues, all monoliths. Thirty of the statues were unveiled during the year, and the whole series is now complete, if not yet in place.

Mr. French undertook the general supervision of the work and contributed the great central figures of Science, represented by a man, and Art, represented by a woman. From his studio also came subsidiary figures of Sculpture. Painting and Architecture, and three figures typifying Greek art. Augustus Lukeman was responsible for four Jewish figures—Lawgiver, Psalmist, Prophet and Apostle; Karl Bitter did the Chinese Philosopher, Religion, Art and Law; and Charles Keck and Edward C. Potter the Indian figures. Miss Janet Scudder, the only woman honored with a commission, made the statue symbolizing Japanese art. Other artists represented are George T. Brewster (Greek Drama); Kenyon Cox (Greek Science); John Gelert (Roman subjects); Charles A. Heber, Edmund T. Quinn and the late Attilio Piccirilli.

No important exhibition of sculpture was held in New York City during the year owing, partly, to the lack of a suitable hall for that purpose. At the spring Academy in New York Mr. Augustus Lukeman showed a life-size "Finding of Moses," and there was a spirited

group, "Colts in Snowstorm," by Miss Anna V. Hyatt.

Among the American sculpture of some importance unveiled and exhibited during the year were Melvin E. Cummings's Robert Burns, in San Francisco; Karl Bitter's Senator Quay, at Harrisburg (State-house); Augustus Lukeman's Dr. Henry, at Princeton University; A. A. Weinmann's Lincoln, at Hodgenville, Ky., and Soldiers' Monument, at Baltimore, Md.; H. H. Kitson's Stephen D. Lee, at Vickburg; William Couper's Longfellow, at Washington; Paul Bartlett's Michael Angelo, at East Aurora, N. Y.; Lorado Taft's Indian Fountain, at Paducah, Ky., and E. V. Valentine's General Lee, at Washington; and Gutzon Borglum's remarkable head of Lincoln.

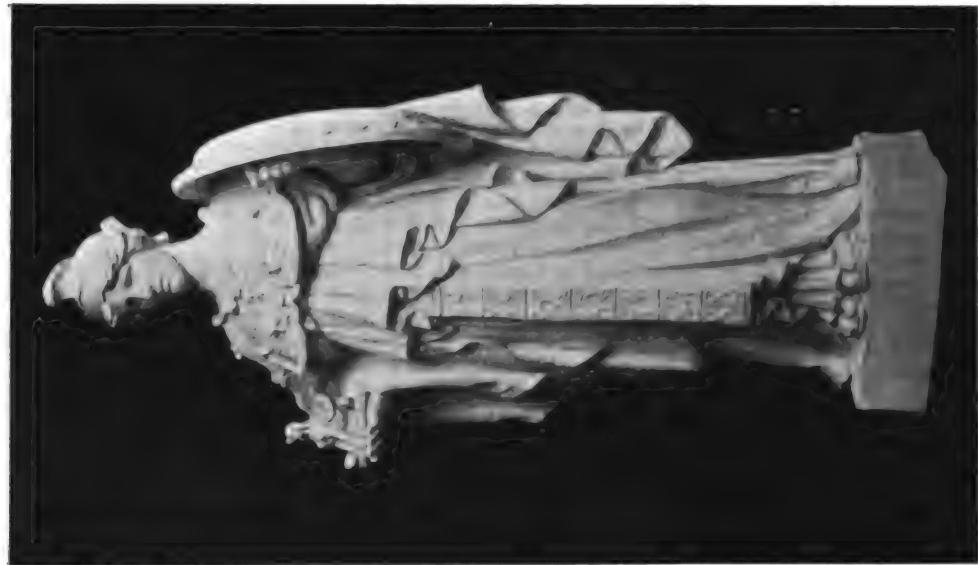

During the year the National Sculpture Society organized a circulating exhibition of 200 small bronzes, which were shown in Buffalo and Pittsburg, and will be sent to other cities.

In France Auguste Rodin's Victor Hugo, in the garden of the Paris Palais Royal, was hailed as a masterpiece. A colossal work by Paul Moreau-Vanthier, at the Salon des Artistes Francais, typified the horrors of the Revolution. A stone wall, forty feet long and ten feet high, was covered with spectral figures in agony, while at the foot of the wall were the dead bodies of War's victims. At the other Paris Salon of the year, the American aéropianists, the Wrights, were glorified by Carvin in busts, and also in a "Muse of Aviation." The American sculptors represented at this Salon were Paul Bartlett, Andrew O'Connor (statue of Lew Wallace), and Richard E. Brooks, who showed a bust of Seward for Seattle and one of Roger Ludlow for the Capitol at Hartford, Conn.

SCULPTURE SOCIETY, NATIONAL. A society incorporated in 1896 for the purpose of spreading the knowledge of good sculpture, fostering the taste for ideal sculpture and its production, the promotion of the decoration of public and other buildings, and the improvement of the quality of the sculptor's art as applied to the industries. The Society had in 1909 about 250 members, of whom about 100 were sculptor members, whose work had to pass a special committee before they could be recommended to election. During 1909 the Society inaugurated a plan of a circulating exhibition of small bronzes to be carried on during 1909 and 1910. These exhibitions are to be held in Buffalo, Pittsburg, St. Louis and Chicago. The honorary president of the society is J. Q. A. Ward. The president is Herbert Adams; vice-presidents, John M. Carrère and Isidore Konti; secretary, J. Scott Hartley.

SEATTLE CANAL. See CANALS.

SEELEY, HARRY GOVIER. An English geologist and mineralogist, died January 8, 1909. He was born in London in 1839, and was educated at Sidney Sussex College, Cambridge. From 1860 to 1870 he was assistant to Professor Adam Sedgwick; in 1876 became professor of geography in King's College; 1880-90, University Extension lecturer; and from 1885 to his death lecturer for the Gilchrist Educational Trust. He was also dean of Queen's College, London, and examiner in geology, University of London. Dr. Seeley gave instruction also in universities in Australia and New Zealand. He made many notable fossil discoveries in the antipodes. Among his writings are: *Index to Fossil Re-*

"Greek Religion"—One of Thirty Statues for the Brooklyn Institute

mains of Aves, Ornithosauria, Reptilia (1869); *Fresh Water Fishes of Europe* (1886); *Factors in Life* (1887); *Dragons of the Air* (1901). He contributed many monographs and articles to the *Transactions of the Royal Society* and other learned bodies.

SEISMOLOGY. Sea EARTHQUAKES.

SELBY, WILLIAM COURT GULLY, VISCOUNT. A British public official, died November 6, 1909. He was born in London in 1835 and was educated at Trinity College, Cambridge. In 1860 he became a barrister and in 1877 was appointed Queen's Counsel. He became in 1879 a Bencher of the Inner Temple. From 1886 to 1895 he was Recorder of Wigan. He became a member of Parliament in 1880 and from 1895 to 1900 was Speaker of the House of Commons. During this time he was member of Parliament from Carlisle. He was created viscount in 1905.

SENDEN-BIBRAN, GUSTAV E. O. E. von. A German admiral, died November 23, 1909. He was born in Lower Silesia in 1847 and entered the German navy in 1862. He commanded the battleship which escorted the Kaiser on his northern trip in 1899 and in 1892 was made rear-admiral. He was made vice-admiral in 1899 and admiral in 1903. He was head of the marine cabinet from 1899 to 1906. He retired from active service in 1907.

SENEGAL. A French colony, the oldest and most important of French West Africa (q. v.). Area, 73,973 square miles. Population, 393,945. Capital, St. Louis (population, 1904, 24,070). Dakar, the seat of the Governor-General of French West Africa, had 18,447 inhabitants; Rufisque, 12,446; Goree, 1560. The natives of these towns are French citizens, entitled to vote. The natives of the territories of direct administration (in which the government exercises absolute authority) are not French citizens and have no vote. The former protectorate, now restored to the colony, retains its separate budget. There were in 1906 34 official schools, with 3431 pupils, and 5 private Roman Catholic schools, with 161 pupils. There is a technical school at Dakar, and at St. Louis a commercial school and a normal school. The natives cultivate ground-nuts, milled corn and rice; castor-beans, cocoanuts, gum and rubber are also produced. The ground-nut crop was reported unusually abundant in 1909. Weaving and pottery and brick-making are the principal native industries. The imports and exports, including those of Upper-Senegal-Niger, which pass through the ports of Senegal, amounted in 1907 to 54,698,406 (France, 30,895,000) francs and 43,858,850 (France, 32,681,000) francs, respectively. The trade in 1908 was reported as showing a steady development, largely due to railway extension. Cotton textiles (1908) were reported as amounting to 35 per cent. of the imports. A railway has been constructed from Dakar to Rufisque, and thence northwest to St. Louis at the mouth of the Senegal River (165 miles), and from Kayes on the same river a narrow-gauge line (347 miles) runs to Konlikoro, on the Niger. There are 1743 miles of telegraph and 287 miles of telephone lines. Direct cables connect Dakar with Brest and Teneriffe. There were (1907) 48 post-offices. There is river service during the rainy season from St. Louis to Kayes. Works are in prog-

ress for harbor improvement at Dakar, the principal port. In 1906, 546 vessels of 706,606 tons entered, and 559, of 720,815 cleared, at the ports. The Bank of Senegal at St. Louis has been fused with the Bank of French West Africa. The Lieutenant-Governor of Senegal is under the direction of the Governor-General of French West Africa. The colony sends one deputy to the French Chamber.

SEPP, JOHANNES NEPOMUK. A German Catholic historian, died in June, 1909. He was born in Tölz, Bavaria, in 1816. After several years devoted to the study of philosophy and in travel in the East, he became professor of history in the University of Munich. He was deposed in 1847, was reinstated in 1850, and retired in 1867. In 1848 he was elected to the Frankfort parliament, and in 1868 was a member of the German Customs parliament. He was a member, also, of the Bavarian Chamber in 1849 and 1869. Dr. Sepp was a historian of great attainments, but he was more widely known through his opposition to the influence of the notorious Lola Montez in the Bavarian University in the time of Ludwig I. of Bavaria. Among his writings are: *Das Leben Jesu Christi* (2d. ed. 1853-62); *Thaten und Lehren Jesu in ihrer weltgeschichtlichen Beglaubigung* (1864); *Jerusalem und das Heilige Land* (2d. ed. 1878).

SERGIEV, IVAN ILYTCH, better known as John of Kronstadt. A Russian priest, died January 2, 1909. "Father John," as he was familiarly called, was, for over forty years, one of the most notable figures in the religious history of Russia. He came of the peasant class and was born in Archangel. Even before he took his degree in divinity at St. Petersburg in 1855 he had become known as a profound scholar and a brilliant theologian. His eloquence and zeal as a preacher soon won for him an immense following throughout the country. His fame as a "healer" was even greater than his renown as a preacher. He is said to have performed marvellous cures for mental and physical ailments. People of all classes came to him for help, and with the money that came in abundance he founded numerous charitable institutions and distributed relief on a large scale. The Emperor Alexander III. summoned Father John to his death bed, and Nicholas II. bestowed many honors and decorations upon him. His last years were clouded by the sacrilegious performances of spurious sects called after him "Johannites," and by unwise excursions into the field of politics. His hold on the common people, however, remained unbroken, and at his funeral 20,000 mourners followed his body to the grave in St. Petersburg.

SERUM THERAPY. The value of serum treatment in epidemic cerebrospinal meningitis was confirmed in 1909. The Flexner anti-meningococcic serum prepared at the Rockefeller Institute in New York was used in the epidemic which raged in Paris in the early part of the year. In this epidemic Netter treated 69 cases with the serum with a mortality of only 20 per cent. The injection was made into the spinal canal, or in some cases where this was impossible, into the lateral ventricles of the brain. Repeated injection was necessary. It is stated that not only is the mortality greatly reduced, but the succeeding complications which characterize this disease were ren-

dered very infrequent. Flexner collected 712 cases in which bacteriologic diagnosis was first made, and the serum treatment employed. The average mortality in this series was 31.4, whereas the average death rate under other methods of treatment ranges from 60 to 90 per cent. An analysis of these cases shows conclusively that the serum is more efficacious in early life, and that its curative value is in proportion to the promptness with which it is given after the onset of the attack. It is to be noticed that the serum is efficacious only in meningitis due to the Diplococcus intracellularis; while streptococcus, pneumococcus, and tubercular infections of the meninges are uninfluenced. Tetanus antitoxin, according to the best available evidence, proved to be of great value as a prophylactic, but very uncertain as a curative agent. When injected in cases infected with the tetanus bacillus, before the disease actually developed, the serum is as certain a preventive as any specific can be. Veterinarians have found that by its routine use in stables in which tetanus was always present and sometimes epidemic horses could be kept free from the disease. One stable where tetanus antitoxin was injected prophylactically in all horses injured about the feet, had no case of tetanus in 5 years.

SERVIA. A constitutional monarchy lying south of Hungary, between Bosnia and Bulgaria. Capital, Belgrade.

AREA, POPULATION, ETC. Area, 18,649 square miles. Population (1900), 2,493,882 (agricultural population, 2,093,947); estimated December 31, 1908, 2,824,844. There were (1908) 25,890 marriages, 103,903 births, 68,924 deaths. Population (1905) of Belgrade, 77,816; Nisch, 21,946; Kraguзвatz, 15,596. Primary education is free, state-aided, and nominally compulsory; but attendance does not exceed 25 per cent of the population. Elementary schools (1906), 1,243, with 2,339 teachers and 120,360 pupils. Secondary, 20 with 347 teachers and 6,061 pupils; normal 4, with 26 teachers and 391 students. Special schools are few; Belgrade University had (1906) 780 students. The Greek-Orthodox is the state religion.

AGRICULTURE, ETC. Servia is essentially an agricultural country. Of the total area (1904) 1,865,392 hectares were under cultivation and 1,546,000 under wood and forest. The area under the principal crops in 1907, and the yield in 1906 and 1907 are given below:

Crop	Hectares 1907	Quintals 1906	Quintals 1907
Corn	549,728	7,057,909	4,493,747
Wheat	367,603	3,595,433	2,279,359
Barley	101,268	1,056,469	683,002
Oats	96,124	673,748	433,128
Hemp	13,809	* 82,391	* 62,013
Flax	2,497	* 7,000	* 7,264
Meadow & grasses	318,155	5,345,854	2,894,952
Plums	188,884	3,443,802	2,882,750

* Fibre.

In 1906, 34,804 hectares were under vines, and 2041 under tobacco; 10,985 persons were engaged in silk culture. There were (December 31, 1905) 969,953 cattle, 3,160,166 sheep, 174,363 horses, 908,108 swine, and 510,063 goats. The forests, improperly managed, yield a profit small in proportion to their value.

Coal and lignite are worked by the government, and by private companies (some Bel-

gian). Total output in 1906, 2,375,067 metric tons. Gold, copper, zinc, lead, antimony, silver, iron, quicksilver, asbestos, arsenic, etc., occur. The development of the mines is hindered by bad roads and poor railway facilities. Flour-milling, brewing, distilling, sugar-milling, weaving, tanning, pottery-making and iron working are the chief manufacturing industries.

COMMERCE. The commerce, exclusive of transit, for three years is given below, in dinars:

	1906	1907	1908
Imports.....	44,328,642	70,583,327	75,635,000
Exports.....	71,604,098	81,491,262	77,749,000

The chief imports for home consumption were: Raw materials and textiles, 23,962,000 dinars; metals, 13,916,000; food-stuffs and liquors, 13,294,000; machinery and implements, 9,161,000; paper, 2,190,000. Exports of domestic produce: Agricultural, animal, and forest products, 70,509,000 dinars; metals, 3,045,000; textiles and raw materials, 1,873,000; minerals, 1,347,000; drugs, chemicals, and colors, 273,000. There is a large export of plums and plum products. The trade by countries for two years is given below in dinars:

	1907	1908
	Imports	Exports
Austria-Hungary	25,599,946	12,032,350
Germany	20,320,391	32,925,623
Great Britain	10,220,270	2,337,465
Turkey	3,326,512	4,379,351
Italy	2,299,498	4,898,867
Belgium	755,696	13,010,853
France	2,428,603	2,704,410

	1908	1909
	Imports	Exports
Austria-Hungary	32,152,000	21,501,900
Germany	21,361,000	14,019,000
Great Britain	8,803,000	499,000
Turkey	3,147,000	10,968,000
Italy	2,272,000	3,490,000
Belgium	1,602,000	16,134,000
France	1,563,000	3,043,000

COMMUNICATIONS. The one railway line, with its branches, has a length of 390 miles. There are 3495 miles of highway, in a bad state of repair; 2140 miles of telegraph lines, 5042 of wire; 175 state telegraph offices; 1090 miles of telephone line and 55,030 of wire; in 1908, 1493 post-offices.

FINANCE. The unit of value is the dinar, worth 19.3 cents. The revenue and expenditure for four years (1907, 1908 and 1909 budget) are as follows:

	1906	1907
	Revenue.....	Expenditure.....
	91,270,375	90,453,752
	87,335,650	90,357,227

	1908	1909
	Revenue.....	Expenditure.....
	95,239,038	103,644,104
	95,091,253	103,323,648

The principal sources of revenue in 1909 were estimated as follows: Direct taxes, 29,117,350 dinars; monopolies, 28,045,726; customs, 11,343,900; state railways, 10,700,000; domains, 6,372,645; excise, 6,000,000. Principal items of expenditure: War, 27,044,930; service of the debt, 26,984,913; public works, 11,612,529;

finance, 10,304,278; pensions and grants, 4,745,355. The debt stood, January 1, 1909, as 541,376,000 dinars. The National Bank of Servia has a nominal capital of 20,000,000 dinars (paid-up, 68,500,000); note circulation (December 31, 1907), 37,382,927; cash on hand, 14,105,842 gold, 7,434,987 silver.

ARMY. The Servian army is organized in three lines with compulsory service. The first line consists of the regular army and its reserve numbering 3200 officers and 120,000 men, though ordinarily maintained at a skeleton strength of about 24,000 with an increase of 10,000 in the summer for manoeuvres. It comprises 5 divisions of infantry, 1 division of cavalry, 2 battalions of fortification artillery, 1 regiment of pioneers, 60 battalions of infantry, 20 squadrons (not including 10 division squadrons), 50 field batteries (42 mounted, 2 horse, 6 mountain), 5 batteries (shell) and 1 mortar battery. The second line estimated at 2000 officers and 75,000 men, comprises 5 divisions of the reserve or 60 battalions, 10 division squadrons, and 20 batteries. The third line, estimated at 1000 officers and 55,000 men, includes 45 battalions of infantry, 5 squadrons, and 5 companies of artillery. In addition there is a gendarmerie of 32 detachments (frontier forces). During 1909 75 mm. (3-inch) field guns with which the artillery was being armed were being issued.

GOVERNMENT. The executive is the King, who is assisted by a council of eight responsible ministers. The legislative power resides in the unicameral National Assembly (Narodna-Skupshchina) of 160 deputies popularly elected. The present King, Peter I. (Karageorgevich), born 1844, was elected to the throne June 15, 1903. Heir-apparent, Prince Alexander, born 1888. The Council of Ministers as composed October 11 (24), 1909, is as follows: President of the Council, N. P. Pasich; Interior, Lubomir Yovanovich; Public Instruction, Yovan Zorezovich; Foreign Affairs, Milovan Milanovich; Finance, S. M. Protitch; War, Col. M. Marinovich; Commerce, etc., Yasha Prodanovich; Public Works, V. Voulovich; Justice, K. Timotievich.

HISTORY. The outstanding event of the year was Servia's quarrel with Austria-Hungary, which at one time threatened war (see BALKAN QUESTION). A report of a speech by the Premier, Milanovich, on January 3, intensified the ill-feeling between the two countries. He was said to have declared that the Balkans were for the Balkan peoples and that Austria-Hungary alone menaced this principle. The Austrian government demanded an explanation and threatened the recall of its Minister. Premier Milanovich declared that he had been misreported. He twice resigned and his resignation was refused, but finally, on January 17, was accepted. A coalition Ministry was formed under M. Novakovich, the leader of the Progressives, as Premier, with M. Milanovich as Minister of Foreign Affairs. King Peter had acted promptly in the matter, demanding such a patriotic coalition which should serve until the crisis with Austria-Hungary was over. This crisis was made the occasion in internal politics for violent attacks on the dynasty on the charge of being indifferent to the misfortunes of the nation and of having failed in its duties. On March 27 the renunciation of the throne by the Crown Prince was received in

the Servian Cabinet and on the following day in the Skupshchina, together with a letter from King Peter accepting the renunciation and naming as his heir his second son, Alexander. The Crown Prince's course was due to the popular rumor that he had caused the death of his valet. The valet's deposition, however, was reported to have declared that the injury resulted from falling down the palace stairs, which were not lighted. The trial of prisoners charged with being spies in the Austro-Hungarian service resulted on June 23 in the sentence of two of them to five months' imprisonment and in the acquittal of five. The visit of King Ferdinand of Bulgaria (q. v.) to Servia in October was hailed as a step toward the restoration of the friendly relations which had been impaired by the violation of the customs convention between the two countries. Before his arrival the Novakovich Cabinet resigned, and was immediately succeeded by a new Ministry under M. Pasich, M. Milanovich retaining his portfolio as Minister of Foreign Affairs.

SEWAGE PURIFICATION. There was comparatively little change in sewage purification theory and practice of 1909. New works for treating sewage were undertaken or projected at many places at home and abroad, but in general these followed well-known lines. The disinfection of partly clarified sewage by bleaching powder, seemed to increase in favor during 1909, but only small installations for this purpose have yet been made. The action sought is germicidal. For the present, at least, disinfection is more suitable for water treatment than sewage treatment. (See WATER PURIFICATION.) Under the vigorous promptings of the Pennsylvania State Department of Health many of the cities of that State are investigating sewage disposal. Philadelphia has established a sewage experiment station to study the applicability of various methods to local conditions. The New Jersey State Board of Health, like the Pennsylvania department just named, has warned many communities that they must stop polluting streams or the ocean within specified periods, and as a result many small plants have been built in the State. In Canada, Toronto has begun work on septic tanks for the partial purification of the sewage before it is discharged into Lake Ontario. See also SEWERAGE, particularly for German and French statistics.

SEWERAGE. With relatively few exceptions all but the smaller cities and towns of the United States and other progressive countries have provided themselves with more or less extensive and adequate sewerage systems. The most notable exception is Baltimore, but that city is now building an extensive sewerage and sewage disposal system at a cost of many million dollars. Concrete and reinforced concrete are growing in favor as materials for the larger sizes of sewers. Figures showing the extent of sewerage systems in the largest cities of the United States in 1907 were included in a U. S. census bulletin on *Statistics of Cities*, compiled in 1909.

FRANCE AND GERMANY. Comparative statistics of sewerage and sewage disposal in France and Germany were published in *Revue d'Hygiène et de Police Sanitaire* (Paris) for October, 1909. The figures were compiled by Dr. Ed. Imbeaux, Director of Municipal Service,

Nancy, France, and were based on the German and French water-works manuals, *Die Städtische Abwasserseitigung in Deutschland* and *Annuaire des Distributions d'Eau*. The French figures were for January 1, 1900, but the German ones were at least two years older, which emphasizes the comparative backwardness of France. For both countries only cities of 5000 inhabitants or over were considered. In Germany, of 719 cities, 193 had good sewerage systems, 63 had partial systems, and 151 had storm water sewers only. Of the 312 cities without sewers 174 had projects for sewers under way. Of the 256 good and partial sewerage systems in Germany 116 have been built since 1900. In France, of 643 cities 66 cities had storm water and house sewers, 257 had storm sewers, only (mostly old and inefficient), and 320 cities, or 50 per cent., had no sewers whatever.

Of the 256 German cities with complete or partial sewerage systems all but 62 reported some measure of sewage purification, but apparently only a portion of the sewage is treated. In some cases the degree of purification attempted is widely variable, for 90 report mechanical separation, which in 11 cases means screening only; 47 report broad irrigation; 38 report biological purification; 8 a combination of mechanical separation and chemical precipitation; 7 house purification systems, and 4 intermittent filtration. In France, Paris and Rheims employ broad irrigation or sewage farming on a large scale and 27 other cities use the same method in varying extent; 5 cities employ biological processes; 4 discharge sewage into the city and the 38 remaining cities, of the 66 with complete sewerage systems, discharge into near-by streams. See also SEWAGE PURIFICATION.

SHACKLETON, ERNEST HENRY. An Antarctic explorer, who, on January 9, 1909, approached within 111 statute miles of the South Pole. (See POLAR RESEARCH.) He was born in Ireland in 1869. He attended Dulwich College in 1886, but left in 1889 before completing

the course. Following his natural bent he went to sea, and circumnavigated the world four times. During the South African war he took part in the transport of troops. In 1901 he was chosen as third lieutenant in the Antarctic expeditions of that year, under Captain A. A. Scott, and he was a member of the party which approached nearest the Pole. On his return home, 1904, Lieutenant Shackleton was appointed secretary to the Scottish Geographical Society. In 1906 he resigned, to contest a parliamentary seat for Dundee, but was defeated. He organized, in 1907, an Antarctic expedition, with the steamer *Nimrod* as transport. Explorations were carried on during 1908, and on October 29 of that year preparations were completed for the rush to the Pole. A fierce blizzard prevented final success, and the party was obliged to turn back. For an account of the results of the expedition, see the article POLAR RESEARCH. He was made C. V. O. in 1908.

SHANLEY, JOHN. An American Roman Catholic prelate, Bishop of Fargo, S. D., died July 16, 1909. He was born at Albion, N. Y., in 1852. His family removed to St. Paul, Minn., in 1857. After a course of study in the College of Propaganda, Rome, he took his ordination vows in 1874. He was for a year assistant pastor at the Cathedral of St. Paul, and in 1875 became pastor. He was consecrated Bishop of Fargo on December 27, 1889.

SHEEP. See STOCK RAISING.

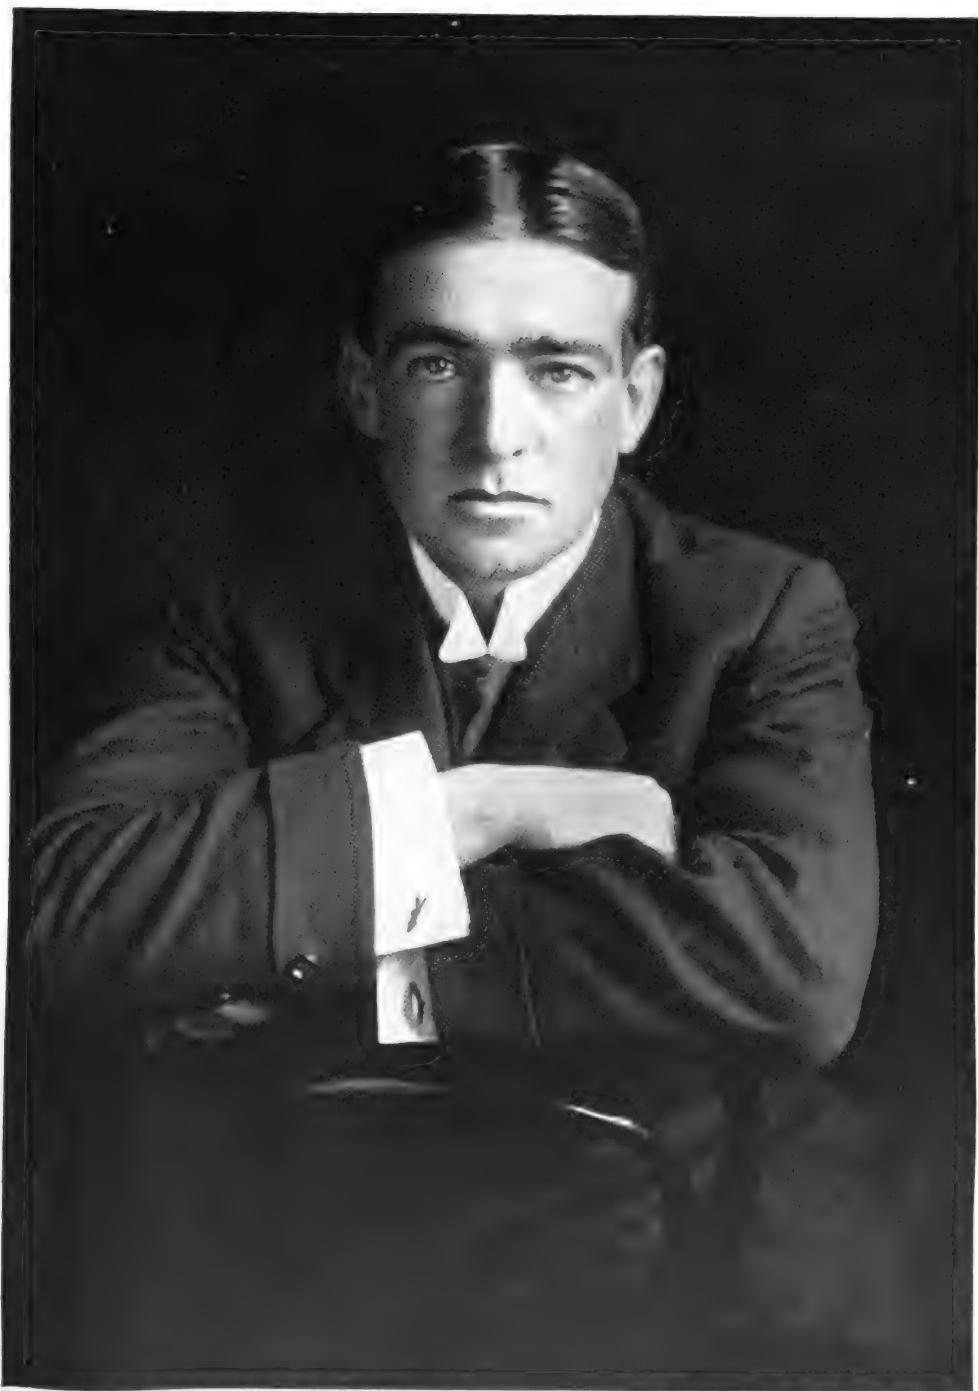

SHIPBUILDING. Lloyd's returns of shipping launched in 1909 as abstracted in *Engineering* (London), showed that in the twelve months there were launched for the respective navies throughout the world 151 fighting ships of various types, each exceeding 100 tons, with a collective displacement of 404,475 tons. This total was nearly 100,000 tons more than in 1908, and 50,000 tons more than the average of the four preceding years. In 1901, however, 123 vessels, of 467,547 tons, were put into the water, and in 1904, 435,006 tons was the complete displacement of the 102 vessels of that

**SIR ERNEST HENRY SHACKLETON, C. V. O.
ANTARCTIC EXPLORER**

year. The figures in the accompanying tables show that the additions to the British fleet in 1909 constituted about one-fourth of the total for the world. Moreover, a greater tonnage was added to the German fleet, while the tonnage of the new French ships launched came within 3000 tons of the British output, the figures being: For Germany, 27 vessels, of 99,116 tons; for Britain, 35 vessels, of 98,790 tons; for France, 19 vessels, of 95,740 tons; and for the United States, which comes next, 15 vessels, of 48,639 tons.

AGGREGATE OF PRODUCTION IN THE UNITED KINGDOM
From *Engineering* (London)

	1909 tons	1908 tons	1907 tons
Steamers*	1,131,549	980,600	1,739,200

Per cent. of all naval tonnage to merchant tonnage.....	11.6	7.5	7.75

* Includes warships built in private yards.

† Excludes British and foreign warships.

Six large merchant steamers over 10,000 tons were constructed during the year in British yards. The largest of these was the Union-Castle liner *Balmoral Castle* of 13,000 tons, built by the Fairfield Company, and then came the *Orvieto* and *Otranto*, by Workman Clark & Co., Ltd., of Belfast, and the *Osterley* by the London & Glasgow Engineering and Iron-Shipbuilding Co., Ltd., of Glasgow, each of 12,130 tons for the Orient Line, the three vessels being sister ships of the *Orsova* and *Otway* completed in 1908. The *Mantua* for the P. & O. Line built at Greenock by Caird & Co., of 10,833 tons and the *Ruahine* for the New Zealand Line, built at Dumbarton by W. Denny & Brother, complete the list of British merchant vessels of notable size.

During the year increased interest was aroused in the two Leviathan ships under construction at the Harland and Wolff yards, Belfast, Ireland, as work was progressing rapidly. These two vessels for the White Star Line, the *Titanic* and *Olympic*, had reached a point where their launching in the following year seemed assured, the *Titanic* being completely in frame at the end of the year. Each vessel is 860 feet in length, 92 feet beam, 45,000 tons displacement and 45,000 horsepower, which will serve to give a speed of 21 knots an hour. There will be both turbine and reciprocating engines in order to secure the greatest economy.

An interesting departure from established

practice was made in the construction of the British merchant vessel *Monitoria*, where the hull was built with large corrugations with the object of increasing the longitudinal strength without adding to its weight. In this way it was claimed that an additional carrying capacity of from three to four per cent. could be obtained with but slight increase in cost.

The combination of turbine and reciprocating engines introduced for intermediate speed vessels as in the *Otaki* and *Laurentic* was found advantageous, both vessels showing substantial economies and other vessels were being fitted with this system in 1909. A low speed vessel was being fitted by the Parsons Company with its turbines.

The United States Commissioner of Navigation reported the following construction for the fiscal year ended June 30, 1909:

Geographical Distribution	1908		1909		
	Atlantic and Gulf Coast	Porto Rico	Pacific Coast	Northern Lakes	Western Rivers
Coast	665	209,778	582	108,904

Total construction	1,457	614,216	1,247	238,090	

In the calendar year 1909 the United States built merchant vessels to the amount of 209,604 tons or a tonnage of 95,000 less than in 1908. The decrease is most marked in respect of coasting vessels of which 78,000 tons less were produced, while the reduction in the case of the Great Lakes tonnage was only 17,000 tons. The figures for the Great Lakes include fifteen steamers, of over 5000 tons, the largest of which was the *Shenango*, of 8407 tons, launched by the Great Lakes Engineering Works of Detroit, Michigan.

The largest and only important ocean steamer was the *Wilhelmina*, of 6975 tons, built at Newport News. There was launched in December at Bath, Me., a large wooden six-masted schooner—the *Wyoming*—of 3730 tons and 350 feet in length, exceeding in size the *William L. Douglas*, 3708 tons, previously the largest sailing vessel ever built in the United States. Only one other sailing vessel exceeding 1000 tons was launched in the United States. The figures do not include river and harbor craft, the total of which amounted to over 33,000 tons.

At the close of 1909 the ship yards of the

Great Lakes had under construction for delivery in the following year, 22 bulk freighters with an aggregate carrying capacity of 203,740 gross tons of ore, increasing the total carrying capacity of the lake freighters in a season to 41,088,000 gross tons.

An important river paddle wheel steamship of a distinctly American type was the *Robert Fulton*, which was built by the New York Shipbuilding Co., of Camden, N. J., for use on the Hudson River as a day boat. It is 348 feet in length, 42 feet beam, and 78 feet in width over the guards, with a steel hull of so fine a model that a maximum speed of 23½ miles an hour was produced without difficulty. The *Robert Fulton* was launched in the record time of two months and ten days after the hull was laid.

Germany, according to Lloyd's returns, built in 1909, 84 vessels, of 128,696 tons, a decrease of 79,000 tons from the total of the preceding year. In 1905 the total was 255,000 tons; in 1908, 318,000 tons. Lloyd's do not take into account vessels launched on the upper rivers, which would have added 27,000 tons to the total output for 1909. Of the vessels built, seven were of 5000 tons and upwards, the largest being 6742 tons. The only sailing-ship of any importance launched during the twelve months was a training-ship of about 1600 tons.

Holland launched 52 vessels of 59,106 tons, exclusive, again, of river craft, of which 19,000 tons were completed. There were three steamers exceeding 5000 tons, the largest, built at Flushing, of 7442 tons.

Japan took fifth place amongst the countries of the world, building 75 vessels, of 52,319 tons, which is only slightly less than in the two preceding years. The principal vessel completed was the *Kiyo Maru*, an oil-carrying steamer of 9300 tons.

France had an output of 51 vessels, of 42,197 tons, only a little more than half that of the preceding year. Nevertheless, there was built the largest merchant steamer constructed outside of Great Britain—the *Espagne*, of 11,000 tons.

Italy increased the output of the preceding year with a total of 31,217 tons, or less than in 1905 and 1907. Three vessels exceeded 7000 tons—the largest, the *Oceana*, being of 8996 tons.

Austria-Hungary produced 15 vessels, of 25,006 tons, which is 15,000 tons more than in 1908, and greater than in any preceding year. Denmark had a total about one-third that of the previous year and in Norway it was only about one-half the average of the preceding five years.

See STEAM TURBINE; BATTLESHIPS; NAVAL PROGRESS.

SHIRLAW, WALTER. An American artist, died December 26, 1909. He was born at Paisley, Scotland, in 1838 and was brought to the United States when but two years of age. He became a banknote engraver, and subsequently in 1861 exhibited at the National Academy. He was actively engaged in art work from that time until his death. In 1868 he became academician of the Chicago Academy of Design. From 1870 to 1877 he studied in Munich. His specialty in painting was genre pictures. He also did much decorative work and illustrations for books and magazines. He was one of the founders and first president of

the Society of American Artists. He became an associate of the National Academy of Design in 1887 and academician in the following year. He taught in the Art Students' League.

SHIVELY, BENJAMIN F. American public official, United States Senator from Indiana. He was born in St. Joseph county, Indiana, in 1857 and graduated from the Law Department of the University of Michigan in 1886. He taught school and engaged in journalism until he was elected to fill the vacancy in the 48th Congress and was re-elected to the 50th, 51st and 52d Congresses. He was Democratic nominee for Governor of Indiana in 1896 and received the Democratic vote of the legislature for United States Senator in 1903-1905. As a result of the election of the Democratic legislature in 1908 he was elected United States Senator on January 20.

SHOES. See BOOTS AND SHOES.

SHOOTING. Higher scores than usual were made in many of the shooting events in 1909, owing to the greater interest taken in the sport and to the improvements made in guns and ammunition. In the matches held under the auspices of the National Rifle Association of America, the individual military championship of the United States was won by Major William B. Martin of the Second Infantry, National Guard of New Jersey, who scored a total of 636. Other winners were: Wimbledon Cup (1000 yards), Sergeant Victor H. Czegka, United States Military Academy; Leach Cup (800, 900 and 1000 yards, seven shots at each), Lieutenant Joseph L. Topham, Thirteenth United States Infantry; Long Range Tyro Match (1000 yards), Lieutenant C. L. Test, Texas National Guard; President's Match, Andrew D. Denny, United States Naval Academy; Press Championship of the United States, Warren H. H. Smith, Cleveland *Leader*; Individual Rapid Fire Match, Lieutenant-Colonel W. A. Tewes, New Jersey National Guard; Regimental Team Championship, First Infantry, Colorado National Guard; Company Team Championship, Company F, First Infantry, Minnesota National Guard; Inter-Club Championship, Fort Pitt Rifle Club of Pittsburgh, Pa.; Revolver Team Championship, First Squadron Cavalry, Colorado National Guard.

The tenth annual tournament of the United States Revolver Association took place September 4-12, the matches being held in seventeen cities. The revolver championship at 50 yards was won by I. R. Calkins of Springfield, Mass., R. H. Sayre of the New York National Guard, who won the preceding year, finishing second. Events and winners in other matches were: Military Revolver Championship, W. H. Whigham, Chicago; Pistol Championship, I. R. Calkins, Springfield, Mass.; Military Record match, C. F. G. Armstrong, Eureka, Cal.; Military Revolver Team match, Squadron A, New York National Guard.

In trap shooting several new records were made in 1909. A. N. Ford in an amateur match in St. Louis made a run of 342 clays without missing and F. Coleman killed 50 live birds in straight shots at Pottsville, Pa. C. G. Spencer accomplished the feat of making 565 targets in an unfinished run. The professional championship of the United States was won by Fred Gilbert, who scored 193 out of a possible 200, and the amateur champion-

ship by D. A. Upson, who made 188. Fred Shattuck won the Grand American Handicap by scoring 20 out of 20 in the deciding shoot-off. The Intercollegiate Spring Tournament resulted in a victory for Yale, with Harvard second and Princeton third. Wright of Princeton made the individual high score. In the fall matches Yale again won, with Harvard second and Pennsylvania third, Princeton not competing. In a dual match between Yale and Princeton, Heberard of Yale made the record individual score of 50 perfect shots.

SHORT BALLOT. See ELECTORAL REFORM.

SIAM. An independent kingdom in southeastern Asia between Burma and French Indo-China. The capital is Bangkok.

AREA AND POPULATION. The area is stated at about 200,000 square miles. By the Anglo-Siamese treaty concluded at Bangkok March 10, 1909, the Siamese states of Kelantan, Tring-ganu, and Keda (qq. v.), with an area of about 12,500 square miles and a population of some 630,000, were ceded to Great Britain. An estimate of the population of Siam, based upon the results of a partial census, places the total at about 6,687,000. The Chinese population is large, amounting in Bangkok alone to some 200,000, the total population of the city being 628,675. In 1908 Chinese coolie immigration was 60,508, and emigration 49,340. The prevailing religion is Buddhism, and education is carried on chiefly by the priests.

PRODUCTION. The staple product and export is rice, and the area under this grain is being much enlarged by irrigation.

In Bangkok there are 26 large rice mills. Other crops of some importance are sesame, hemp, cotton, tobacco, and pepper. Fruits are abundant. Cattle are raised in considerable numbers. Rubber collection has been begun, and the cutting of teak in northern Siam is an important industry, chiefly in British hands. Large quantities of fish are taken along the coasts. Except tin (in the Malay Peninsula) and rubies and sapphires, the mineral resources have been little exploited.

COMMERCE. In the fiscal year ending March 31, 1908, imports and exports by sea were valued at £5,784,985 and £7,332,241 respectively; in the fiscal year 1909, £5,782,000 and £7,583,000 respectively. In the former year, the principal oversea imports were: Cotton goods, £996,795; treasure, £895,144; steel, iron, and machinery, £398,053; silks, £247,056; gunny bags, £220,714; sugar, £192,421; kerosene, £140,788; opium, £122,029; cotton yarn, £110,016; hardware and cutlery, £160,743. The chief exports are rice and teak. In 1905 rice exports amounted to 820,864 tons, valued at £4,600,653; 1906, 917,682 tons, £5,546,926; 1907, 683,851 tons, £4,897,613. The following are oversea export figures for the fiscal year 1908: Rice, 705,855 tons, valued at £5,556,560; teak, 87,437 tons and 426 tons of teak shingles, £981,513; other woods, £24,755; treasure, £139,652; marine products, £122,075; hides, £86,420; pepper, £56,965; silks, £35,501; raw silk, £32,869; bottles, £20,981; bullocks, £20,423; sticklac, £19,280; birds' nests, £12,789. In the fiscal year 1909, the oversea export of rice was valued at £5,975,000, and teak £887,000. There is a comparatively small trade, for which complete statistics are not available, between northern Siam and Burma, the British States, and Yun-

nan. Bangkok has almost the entire oversea trade. Singapore and Hongkong send about one-half of the imports and receive about seven-tenths of the exports.

COMMUNICATIONS. There are open to traffic about 600 miles of railway, mostly owned by the state. There is a considerable mileage under construction and projected. The government is extending the railway system northward. The Anglo-Siamese treaty of March 10, 1909, provides for a southward extension to connect with the system of the Federated Malay States; thus, with the construction of about 150 miles in the Federated Malay system and the completion of the southward Siamese extension, Bangkok will be placed in direct rail communication with Singapore. Siam was to contract a loan of £4,000,000 for construction. There are about 3000 miles of telegraph line, with over 6200 miles of wire. Post-offices in 1908 numbered 113.

In 1908 there entered the ports 785 vessels (with cargo), of 762,191 tons, and cleared 791, of 767,517 tons. The merchant marine in 1908 consisted of 18 steamers, aggregating 2120 tons, and 50 sailing vessels and junks, aggregating 4626 tons.

FINANCE. The unit of value in the tical, which has been worth about 36 cents, fluctuating with the price of silver. In the latter part of 1908, a measure was enacted providing for the establishment of the gold standard and fixing the value of the tical at one-thirteenth of a British sovereign, or 37.43461 cents. Revenue and expenditure for 1906-7 are stated at 57,014,805 ticals and 56,837,460 ticals respectively; estimates for 1907-8, 50,700,805 and 56,261,524 respectively; for 1908-9, 59,200,717 and 66,594,611. Revenue is divided principally from taxes on opium, spirits, and gambling (which are farmed out) and from customs, land, and fisheries. Estimated farmed receipts in 1907-8 were 24,983,405 ticals; land and fisheries, 8,454,775; customs, 5,826,600; railways, 4,100,009. The principal items of expenditure were: War, 14,270,854; interior, 11,189,759; civil list, 7,500,000; railways, 6,000,000; finance, 5,714,407. The government has undertaken to suppress the gambling houses and, with the consent of the treaty Powers, will make up the loss of revenue by increased import duties.

The public debt in 1909 stood at £4,000,000. The paper currency on March 31, 1908, amounted to 14,796,040 ticals.

ARMY. The active army consists of about 6000 men and on a peace footing consists of 10 divisions and 80 pieces of artillery. In each division are two regiments of infantry, 1 regiment of cavalry or chasseurs, (2 squadrons), 1 regiment of artillery, 1 company of engineers, 1 company of train, and an ambulance company. The armament is modern, the rifles being Mannlicher and Mauser. In addition to the standing army there is a general training of male inhabitants for the militia.

NAVY. The effective navy, as reported in 1909, consisted of one imported small cruiser, 4 gun-boats, 3 torpedo gunboats, and one torpedo-boat destroyer. There were several dispatch boats, transports, etc., and various small craft for river service.

GOVERNMENT. The executive power is exercised by the King, assisted by an appointed ministry. There is a legislative council (41 members at present) appointed by the King.

The King in 1909 was Chulalongkorn I., who was born September 21, 1853, and succeeded to the throne October 1, 1868. The heir apparent is Chowfa Maha Vajiravudh. The administration and general condition of Siam have been greatly improved in recent years through foreign advisers in various branches of the government.

HISTORY. Important territorial cessions have been made by Siam to France and Great Britain in recent years. To France Siam ceded, by the treaty of March 23, 1907, certain regions adjoining Cambodia having an area of about 7800 square miles and a population of about 200,000, and leased for fifty years to the government of Indo-China at a nominal rent certain lands on the right bank of the Mekong. On the other hand France restored to Siam the port of Krat and the Dansai region in Laos. An understanding between Great Britain and Siam was reached in 1908, whereby Kelantan, Tringganu and adjacent territories were to be ceded to the former. This was definitely carried out in the Anglo-Siamese treaty of March 10, 1909 (see MALAY STATES), which contained also important provisions as to the status of British subjects. All the rights and privileges enjoyed by natives were extended to British residents. British subjects registered at the British consulate before the signature of the treaty (March 10) were placed under the jurisdiction of the Siamese international courts; those registered after March 10 were placed directly under the jurisdiction of the Siamese courts. Certain conditions designed to safeguard the rights of British subjects in these courts were, however, stipulated, the chief one being that European advisers should sit in any court trying a British subject. Upon the completion of the Siamese codes, the jurisdiction of the international courts was to be transferred to the ordinary Siamese courts and the above distinction would no longer be made.

SIERRA LEONE. A British colony and protectorate on the West African coast. Area of Sierra Leone proper (the peninsula only) 300 square miles; of the colony 4000 square miles; population (1901) 76,655; area of the protectorate 30,000 square miles; population (estimate), 1,000,000. Capital, Freetown, 37,280 inhabitants; the greatest seaport in West Africa, with a splendid harbor. There are in the colony 40,790 Protestants, 7396 Mohammedans, 571 Roman Catholics; remainder, pagans. There are mission and Mohammedan schools, and the Fourah Bay College affiliated with the University of Durham. Numerous descendants of liberated Africans from North America and the West Indies are engaged in the production of palm-oil, palm kernels, rice, rubber, kola-nuts, ground-nuts, cocoanuts, ginger, etc. Imports (cotton goods, coal, wearing apparel, hardware, tobacco, etc.) for 1908 amounted to £813,700 (Great Britain £570,908), exports £736,755 (Great Britain, £177,216), against £988,022 and £831,259 in 1907. A railway (227 miles) has been constructed from Freetown into the interior, with terminus at Baiamea near the Liberian frontier. There are 227 miles of telegraph line. Revenue and expenditure (1908) £321,000 and £341,871 respectively, against £359,104 and £345,567 in 1907. The Governor (1909, Sir Leslie Probyn) is aided by executive and legislative councils.

SILK. The silk crop of 1909 was the largest on record, being approximately 1,000,000 kilograms greater than that of 1908 excluding the Tussah production, which was estimated at 10 per cent. below that of 1908. In Italy there was a decrease of 500,000 kilos from the crop of the previous year, due to unfavorable conditions in the Piedmont district and the failure of the crop in southern Italy. Austria-Hungary showed an increase of about 60,000, the Levant an increased production greater by about 200,000 kilos, while Japan had its largest crop on record, exceeding the previous year by at least 600,000 kilograms, a gain practically equaled by China.

ESTIMATES OF THE WORLD'S SILK CROP
American Silk Journal

	Kilos 1909	Kilos 1908	Kilos 1907
Europe.....	5,200,000	5,555,000	5,917,000
Levant.....	2,900,000	2,670,000	3,024,000
China.....	4,400,000	3,732,000	3,144,000
Canton.....	2,100,000	2,341,000	2,202,000
Japan.....	8,100,000	7,490,000	6,300,000
Bengal.....	400,000	300,000	340,000
Total.....	23,100,000	22,088,000	20,927,000

The American market plays a very important part in the world's silk trade and holds the control of raw silk prices as it consumes almost 45 per cent. of the total raw silk production, while at the same time its imports of raw silk and silk fabrics taken together amount to about one-half of the world's known consumption.

In 1909 37 new silk mills were constructed in the United States, of which 34 were located in New Jersey and Pennsylvania, showing the tendency towards concentration in this industry. In fact while the total mill construction was in excess of that of 1908, when 32 new mills were built, yet in that year six different States were represented. The total number of new mills since 1903 was as follows; 1903, 58; 1904, 49; 1905, 53; 1906, 36; 1907, 51; 1908, 32; 1909, 37. The distribution of the new mills both as regards location and class of product in 1909 is shown in the following table from the *Textile World Record*:

NEW SILK MILL CONSTRUCTION, 1909

	New Jersey	Penn.	Mary- land	Vir- ginia
Broad Silk.....	9	7	1	..
Ribbon	4	10	1	..
Silk Throwing.....		4	..	1
Total	13	21	2	1

Davison's Silk Trade for 1910 reported 1283 mill in the United States on December 31, 1909, as compared with 1180 on the same date of the previous year. They were divided as to the class of goods manufactured as follows: Broad silks, 390; ribbons, 155; pluses and velvets, 15; webbing and narrow fabrics, 44; laces and veilings, 22; commission throwsters and thrown silk, 162; sewing, twist and knitting silk, 28; spun silk, 6; artificial silk, 2; silk laces and lacings, 18; silk covered wire, 35; trimming and braids, 209; knit goods, 107; gloves and mittens, 31; upholstery goods, 21; carding and

waste, 1; warp, wind, spool, quill, etc, 37. There were also engaged in the industry 111 dyers and finishers of silk and silk mixed goods. New Jersey leads all other States in the number of its mills, 371 in 1909, and of these 292 were located in Paterson. New York has 309, Pennsylvania 325, Massachusetts 70, Connecticut 74, and Rhode Island 35, the remainder being distributed among other States.

An interesting development in the United States during 1909 was the increased raw silk consumption on the part of the cotton mills,

these factories using large quantities of Tussah silk in making the silk and cotton mixtures which were in great demand. The cotton mills made cotton back satins, cotton warp pongees, and cotton warp novelties to a degree that caused silk makers considerable anxiety. The ribbon industry in the United States was disappointing, but in Europe conditions were

good. Broad silks were not favored as much by fashion as in previous years, but with high prices for cotton and wool at the end of the year a better season for silk fabrics was hoped for.

Raw silk in skeins, reeled from the cocoon or unreeled to the amount of 22,227,185 pounds, valued at \$74,060,605, was imported into the United States in 1909, as compared with 18,723,119 pounds, valued at \$64,239,034, in 1908. Japan furnished the greater part of the imports, supplying 12,211,360 pounds, valued at \$42,305,934, and was followed by Italy, 4,595,232 pounds, valued at \$17,837,048; Chinese Empire, 4,490,836 pounds, valued at \$11,041,578; France, 761,364 pounds, valued at \$2,237,970; and other countries, 168,193 pounds, valued at \$638,075. The total imports of manufactures of silk aggregated \$32,963,162 as compared with \$27,020,212 in 1908, France as usual supplying the greatest amount, with imports valued at \$15,313,137, followed by Germany with \$6,083,363; Switzerland, \$4,421,867, and United Kingdom, \$2,585,552.

SILUNDRUM. See CHEMISTRY, INDUSTRIAL.

SILVER. During 1909 the silver mining industry suffered from low market prices for the metal and for copper and lead. The average price of silver in 1908 was 53 cents per fine ounce, but declined in 1909 to 52 cents, or 25 cents below the average for the last thirty years, a value not sufficiently attractive to justify the mining, under ordinary conditions, of low grade silver ores. The production of silver in the United States in 1908-9 will be found in table I. given in preceding column. The figures for 1909 are from the preliminary estimates made by the Director of the Mint.

From these figures it will be seen that the production of silver was maintained at about the same figures as in 1908, and at about 3,500,000 ounces above the average output for the last thirty years, even though the value was over \$10,000,000 less than the average for this period. The most notable increase of production in 1909 as compared with 1908 was in Montana, and Arizona, which are large copper producers and where the smelting industries were generally active in 1909. In Colorado there was little profit in mining and smelting low-grade ores, and a heavy decrease of 1,056,000 fine ounces or about 10 per cent, of the output of 1908 was indicated. In both Idaho and Nevada decreased output is shown amounting to more than 500,000 ounces in each case. The market for silver in 1909 offered little encouragement, as a largely increased foreign output, especially from the Cobalt district in Canada, was in competition with the domestic production. The failure of India to buy as largely as usual was only partly offset by the sales to China.

From estimates of the Bureau of Statistics, the imports in 1909 were valued at \$30,332,088 for silver in foreign ore, \$12,431,150 for silver in foreign bullion, and \$2,987,768 for silver in foreign coin. During the same year exports of silver were valued as follows: Domestic ore, \$640,647; foreign ore, \$68,278; domestic bullion, \$54,336,904; foreign bullion, \$1,223,426; United States coin, \$170,258; and foreign coin, \$570,831. The value of silver in excess of total exports over that of imports in 1909 was therefore

\$11,270,338. The imports of silver were chiefly in the form of ore and bullion, and came largely from Mexico and Canada, about twice as much from Mexico as from Canada. The exports consisted almost wholly of ore and bullion, and went chiefly to the United Kingdom, although important shipments were made also to Hong-kong direct and to France.

The average price of silver in New York and London by months during the year 1909 is indicated in the table below, taken from the *Engineering and Mining Journal*.

SILVER.

Month	New York		London	
	1908	1909	1908	1909
January	55.678	51.750	25.738	23.834
February	56.000	51.472	25.855	23.706
March	55.365	50.468	25.570	23.227
April	55.506	51.428	25.138	23.708
May	52.796	52.905	24.377	24.343
June	53.663	52.538	24.760	24.166
July	53.115	51.043	24.514	23.519
August	51.688	51.125	23.858	23.588
September	51.720	51.449	23.877	23.743
October	51.431	50.923	23.725	23.502
November	49.647	50.703	22.933	23.351
December	48.766	52.226	22.493	24.030
Total	52.864	51.503	24.402	23.726

New York, cents per fine ounce; London, pence per standard ounce.

SINGAPORE. See STRAITS SETTLEMENTS.

SKATING. The International Outdoor Skating Championship contests were held at Saranac Lake, New York, on February 4. O. B. Bush won the 220-yard race in 19½ seconds and Edmund Lamy won the 880-yard event in 1 minute 23½ seconds, the 1-mile in 2 minutes 53½ seconds and the 3-mile in 9 minutes 31 seconds. Bush and Lamy also divided honors in the Canadian Amateur Championships at Montreal (February 6), Bush winning the 220-yard race and Lamy the 880-yard, 1-mile and the 3-mile events.

In the National Indoor Championships, held at Cleveland, Ohio, on January 25, Lamy won the 880-yard, the 1-mile, the 1½-mile and the 2-mile events. The winners in the International Indoor Championships, held at Pittsburgh, January 29-30, were: 880-yards, Bush; 1-mile, Bush; 2-mile, Lamy, and 5-mile, Lamy. In the professional meet at Cleveland on March 11, Baptil won the mile and Wood the quarter mile.

New York City is the principal centre in the United States for roller skating. The chief events in this sport with their winners in 1909 were: Eastern Professional Championship at one and two miles, Frank Goldie of St. Louis; Greater New York Professional Championship at one, two and three miles, W. Blackburn; Greater New York Amateur Championship at one, two, three and four miles, W. Doxsey, and at five miles, H. Smith. The National Championship in figure skating in 1909 went to A. Williams.

SLEEPING SICKNESS. The mortality from this disease, which had ranged from 20,000 to 30,000 a year in Uganda, has, according to Governor Bell of the Uganda Protectorate, been brought under control, less than 2000 deaths occurring during 1908, and these almost exclusively in the segregation camps. This result was obtained only by the most drastic

measures. For several hundred miles along the shore of Lake Victoria a strip two miles in width has been depopulated and the inhabitants removed inland. All cases were segregated into large camps and great care taken to eliminate all sources of infection. The interesting fact that the habitat of the tsetse fly (*Glossina palpalis*) is confined within belts of territory, is of great importance in preventing sleeping sickness. These belts are sharply defined, and if one is ten feet outside of the fly belt he runs little chance of being bitten. This is illustrated by several incidents. Caravans crossing a river in the midst of a fly belt in a certain city used to carry cases of sleeping sickness down to the coast. By changing the route a few yards upstream this source of infection was avoided. One village situated in a fly belt was decimated. On the removal of the village to a location about a quarter of a mile away no further case of sleeping sickness developed. The question as to the method by which the tsetse flies transmit sleeping sickness is still unsettled. As the result of experiments by Kleine, Bruce, Taute and others, it is believed that transmission is not purely mechanical, but that the flies are true hosts for the *Trypanosoma gambiense* and that the period of incubation in the fly is about twenty days. These organisms are thought to undergo a period of development in the tsetse fly analogous to that of the malarial parasite in the mosquito. It is believed that this discovery has considerable importance with regard to the prophylaxis of sleeping sickness, because once the cycle of development of the trypanosoma is completed, it may be capable of transmitting infection for long periods. Medical treatment by means of atoxyl, an arsenical preparation from which so much was hoped, has proved a failure. (See *Bulletin No. 3* published by the Sleeping Sickness Bureau, London, 1909.)

SMALLPOX AND VACCINATION. An outbreak of smallpox occurred in Bristol, England, during the early months of 1909. The first case was that of a dock laborer, employed in unloading barley from a ship from southeastern Europe. Several people were infected by one case that was not recognized. This patient was taken to a hospital and after death was removed to his home, where a wake was held. Employees of the hospital and several of his friends who attended the wake contracted the disease. In answer to an anti-vaccinationist who attempted to make capital out of the small epidemic, it was brought out that of all the children under 14 who were exposed to infection nine contracted smallpox. Two of these had been vaccinated; and in them the attack was abortive. Of the seven unvaccinated children three died. Eastern Europe appears to be a reservoir for smallpox. The difficulty in stamping out the disease in Russia is illustrated by the fact that in this country, according to the Russian correspondent of the *Deutsche Medicinische Wochenschrift*, there were 10,000,000 members of the orthodox religion—"old believers"—who oppose vaccination on the ground that they see in scarification the sign of antichrist. A bill brought forward by the government to establish general vaccination was rejected by the commission appointed to consider the measure, it is believed on the above grounds.

In contrast to this, Mozzetti relates an interesting experience in Abyssinia, where, there be-

ing some danger of an epidemic of smallpox he vaccinated, at the request of the native authorities, several thousand people, with the usual technic. The authorities, however, decided that this was not sufficient, and the people were vaccinated over again by the method of variolation, that is, inoculation with pus taken from a smallpox patient. These latter inoculations did not "take" upon any of the previously vaccinated persons, thus proving conclusively the sufficiency of vaccination with cow lymph.

McFarland answers certain stock objections to vaccination in the following way: To the statement that cases and deaths from smallpox occur in every country no matter how thoroughly vaccinated, it is rejoined that some vaccinations miscarry; some individuals are not rendered immune thereby, others have outlived the immunity conferred by their vaccination. These persons are all susceptible, and may be infected if they come in contact with the disease. To the objection that in most epidemics a certain number of vaccinated individuals contract the disease, the same answer is made: that these individuals have outlived their immunity. The third objection—that in most places more vaccinated than unvaccinated persons die,—is met by the fact that this is inevitable when the number of vaccinated greatly exceed the unvaccinated. Complete protection is to be had only through strict enforcement of vaccination, so that the number of unprotected individuals is reduced to a minimum.

SMILLIE, JAMES DAVID. An American artist, died September 14, 1909. He was born in 1833 in New York City, and received his first lessons in art from his father, James Smillie, an engraver. Until 1862 he worked chiefly at bank-note vignettes, but at the same time also devoted himself to general design and illustration, studying at the schools of the National Academy of Design. From 1862 to 1864 he studied in Europe, and upon his return to New York exhibited at the National Academy of Design, of which he was made a member in 1876. His paintings in oils include "Evening among the Sierras of California" and "Lifting of the Clouds in the Adirondacks." Among his works in water-colors are the "Scrub Race on Western Prairies" and "Track of the Torrent." As an engraver, Smillie produced original plates in illustration of the various styles of engraving for the department of graphic arts at the Pratt Institute, Brooklyn, and the Smithsonian Institution, Washington, D. C. His work shows remarkable skill in the handling of colors.

SMITH, CHARLES STEWART. An American banker and art connoisseur, died November 30, 1909. He was born in Exeter, N. H., in 1832. He served as clerk in a drygoods house in New York City for six years, after which he obtained an interest in the firm of S. B. Chittenden and Co. As foreign buyer for this firm he cultivated a taste for art, which later led to the massing of a large collection of valuable works. He subsequently helped to establish the commission house of George C. Richardson & Co., which became Smith, Hogg & Gardner. He retired from this firm in 1887. In 1894 he declined the Republican nomination for mayor, referring to exert himself as chairman of the Committee of 70 to bring about the election of

Mayor Strong. As chairman of the Building Committee of the Metropolitan Museum of Art, he advocated the building of a large gallery exclusively for American works. He left a large collection of paintings of different national schools. He was a member of the Rapid Transit Commission and was for seven years president of the Chamber of Commerce. He was one of the founders of the Fifth Avenue Bank and of the German American Insurance Company, besides being a trustee in many other banking and insurance corporations.

SMITH, CLEMENT LAWRENCE. An American scholar and educator, died July 1, 1900. He was born at Upper Darby, Pa., in 1844, and in 1860 graduated from Haverford College. In 1863 he graduated from Harvard College. From the latter date to 1869 he taught at Haverford, when he went to Swarthmore College. A year later he became tutor in Latin at Harvard College, and in 1873 was made assistant professor. From 1882 to 1891 he was dean of Harvard College, and from 1898 to 1901 was dean of the faculty of arts and sciences. He retired from active service in 1904. Professor Smith was president of the American Philological Association in 1898-9. He edited the *Odes and Epodes of Horace*, and was a contributor to philological journals.

SMITH, W. SAUMAREZ. Archbishop of Sydney, and Primate of the Anglican Church in Australia, died in April, 1909. He was born in 1836, and was educated at Trinity College, Cambridge, graduating in 1858. After several years in India as chaplain to the Bishop of Madras, he became, in 1869, principal of St. Andrew's School. In 1890 he was appointed Bishop of Sydney, and later Archbishop.

SMITH, WILLIAM THAYER. An American physician and educator, died September 17, 1909. He was born in New York City in 1839 and graduated from Yale College in 1860. In 1876 he graduated from the Dartmouth Medical School and a year later from the medical department of New York University. He was professor of physiology at the Dartmouth Medical School from 1885 to 1907. In the latter year he was made professor emeritus of physiology and professor of clinical surgery. He was a member of the American Medical Association and the American Academy of Medicine.

SMITH COLLEGE. An institution for the higher education of women at Northampton, Mass., founded in 1875. In 1909 there were 1800 students in attendance and the faculty numbered 118. In the library there were 30,000 volumes. Gifts were received during the year amounting to \$65,398. The endowment of the college is about \$1,300,000 and its annual income approximately \$200,000. Arrangements have been made for the erection of additional buildings including the Assembly Hall and two dormitories. In 1909 Reverend Marion Le Roy Burton was elected president, succeeding L. C. Seelye.

SMITHSONIAN INSTITUTION. An institution established in 1846 in accordance with provisions of the will of James Smithson, an Englishman, who bequeathed his fortune to the United States for the increase and diffusion of knowledge. The parent Institution has administrative charge of several branches, which were developed by its early activities and are now

supported by Congressional appropriations. These are the United States National Museum, the International Exchange Service, the Bureau of American Ethnology, the National Zoölogical Park, the Astrophysical Observatory, and the Regional Bureau for the International Catalogue of Scientific Literature. The institution issues three regular series of publications: *Smithsonian Contributions to Knowledge*, the *Smithsonian Miscellaneous Collections*, and a *Smithsonian Annual Report*. The *Proceedings and Bulletins* of the National Museum, the *Reports and Bulletins* of the Bureau of American Ethnology, and the *Annals of the Astrophysical Observatory* are issued under the auspices of the Institution. Investigators are aided by grants for original research to the extent of the funds available for the purpose. During the year 1909, the Institution conducted various researches in zoölogy, paleontology, meteorology, and botany. It made allotments from its Hodgkins Fund for the furtherance of studies on the relation of the atmosphere to the welfare of man, including the erection of a stone shelter on the summit of Mount Whitney, California, at an elevation of 14,502 feet, for the benefit of scientific investigators; the preparation of a bibliography of aëronautical literature containing about 13,500 references. The Board of Regents established, as a memorial to the late Secretary Langley, a gold medal to be known as the "Langley Medal," which is to be awarded for specially meritorious work in connection with the science of aërodromics. The first award was made to Messrs. Wilbur and Orville Wright. For sixteen years the Institution has supported a table at the Naples Zoölogical Station for the use of American biologists. The Smithsonian African Expedition, under the direction of Colonel Theodore Roosevelt, sailed from New York, March 23, arriving in Africa, April 21. In December, 1909, the results of the Expedition had totaled 6663 skins of large and small mammals and birds, besides many skulls and skeletons and about 2500 sheets of plants. No part of the expenses of the expedition has been paid either from the funds of the Institution or from any government appropriation, being provided entirely by private subscription. The annual income of the parent Institution is about \$80,000 and the Congressional appropriations disbursed under its direction for the government branches administered by it aggregate about a million dollars each year. The Secretary of the Institution is Charles D. Walcott; Assistant Secretary in charge of the United States National Museum, Richard Rathbun. See UNITED STATES NATIONAL MUSEUM.

SMOKE PREVENTION. This continued in 1909 to receive the attention of an increasing number of cities and smoke abatement leagues. Studies of the subject have been made by the Technologic Branch of the United States Geological Survey, from which information may be secured. A number of papers on smoke prevention were read before the Cincinnati meeting of the American Civic Association in November, 1909, including a general review of the subject by R. C. Harris, of Toronto, Ont., Secretary of the National Association for the Prevention of Smoke.

SOCIALISM. The increasing influence of socialism, under one or another of its manifold

forms, in the domain of political affairs, was plainly discernible during the year 1909. The socialists as a political party added greatly to their numerical strength, notably in France and Germany. It was a year of social unrest and of legislative attempts to solve social questions, as illustrated by the postmen's strikes in France, the great strike in Sweden, the Barcelona revolt, the debate on the British budget and the issue with the House of Lords, and by many measures either passed by the various parliaments or under discussion, which dealt with social questions. In the following paragraphs will be found a brief review of the socialist movement by countries.

FRANCE. Despite the formation of a United Socialist party in 1905 there has been constant warfare between the factions. The hostile revolutionary minority headed by Hervé does not rely exclusively on the mass movement, but believes that much can be done by bands of agitators, though in a minority. Strikes are not enough; riots and violence also have their use. The riot at Villeneuve St. Georges in 1908, when a number of the participants were killed, expressed the spirit of Hervéism. At the Congress of Toulouse in 1908, the counsels of Jaurès prevailed and this policy of guerilla warfare was unanimously condemned. Jaurès did not, he said, oppose violence, but it must be organized and general. He did not approve the skirmishing of an advance guard. Hervé's weekly paper, *The Social War*, on the other hand, implied approval of sporadic acts of violence as tending to help the cause. Partisans of this method among the socialists, syndicalists, and anarchists grouped themselves under Hervé in a Revolutionary Federation and explained their programme in March. They favored a true international socialism as against the parliamentary socialism of the Jaurès and Guesde groups and the institutional socialism of the syndicalists. The Hervéists held that the objects sought could not be gained through the suffrage but only through direct action. They desired a concentrated attack on property, country, state, law and bourgeois morality. They aimed at an insurrection through a general strike and a military revolt. Anti-militarism was the chief feature of their programme. They also opposed all compromise with other parties, demanding that socialists should retain their candidates in elections and not ally themselves with other parties even when the election of their own candidate was impossible. This question came up at the Congress at St. Etienne, April 11-14, 1909. Jaurès, the advocate of "republican discipline," held to the principle of compulsory withdrawal of socialist candidates on the second ballot on behalf of the most favored Radical, and Vaillant demanded withdrawal pure and simple, but the matter was deferred to the next Congress, which will meet in 1910 and decide the general election policy, and till then the way was to be open for alliance with other parties in the complementary elections.

Meanwhile the socialist vote in the complementary elections was greatly increasing. In twelve districts the vote was 33,898, in 1909, as against only 16,322 in 1906. For an account of the postmen's strike, see FRANCE, paragraphs on *History*. Parliamentary socialism profited little from these affairs. Although the unified socialists gained many new adherents in the

country at large, the syndicalists seemed indisposed to alliance with them, tending more and more to independent action. In the first postmen's strike M. Jaurès's paper, *L'Humanité*, remained silent. The anarchists hailed it as a step toward anarchism. M. Yvetot in the *Social War* applauded it as marking the beginning of the overthrow of both the Chamber ("a kennel of crouching dogs") and the Senate ("a hospital for parliamentary invalids"). In the second strike M. Jaurès approved the declaration of a general strike issued by the Confederation's Committee. May Day passed without disturbance. The strength of the Socialist party in 1909 was estimated at 90,000.

The unified socialists were more or less hostile to the new Ministry, for although M. Briand, the Premier, and M. M. Viviani and Millerand were socialists their policy was one of conciliation and of alliance with other republican parties. The national council of the unified socialists adopted at its October meeting a resolution declaring that the party must refuse the government its confidence. "The fact that the Ministry comprises some persons who have abandoned the party is the more reason for deeply distrusting it, inasmuch as a decision of the party forbids voting for independent socialists on the second ballot at elections." This was opposed in vain by M. Jaurès, who denounced the policy of hostile aloofness and offered a milder resolution which was not accepted. Preparatory to the elections of 1910 the socialists allied themselves with the campaign for proportional representation and electoral reform through the *scrutin de liste*. The former would naturally benefit them along with the other minority parties. The *scrutin de liste* was desired as putting an end to the whole difficulty arising from the question of alliance with other parties on the second ballot, for under it there would no longer be a second ballot. Thus it would prevent confusion of parties, consolidate the socialists, and strengthen class feeling. See TRADE UNIONS.

GERMANY. The twentieth Congress of the German Social Democrats was held at Leipzig in the middle of September. An increase of numbers and an improvement in financial status were announced. The number of members enrolled was now 633,309, and this was less than 20 per cent. of the votes cast for socialist candidates in the last general election. The Social Democratic deputies in the Reichstag were called in question before the Congress for having voted for the succession tax (see GERMANY, paragraphs on *History*) contrary to the rule that the party should not vote the budget, but they defended themselves on the ground that had they voted against it they would have played into the hands of the worst reactionaries. They had rejected the 400,000,000 marks of indirect taxes as placing the burden on the poorer classes, but supported the succession tax which laid the charge on those who could afford to pay it. No vote was taken on the question, the subject of taxation being deferred to the next Congress. It was unanimously resolved to boycott brandy as a protest against the duties, which the socialists regarded as unjustly discriminating in favor of the landed class. A resolution was introduced on September 15, declaring coöperation with the Radicals impossible, and denouncing the Liberals

as traitors to the interests of the working classes, but it was subsequently rejected, showing that the extremists were not the predominant element. Money had already been sent in aid of the Swedish strikers and the Congress voted on additional contribution. The most important feature of the year was the extraordinary gain of Socialist votes in the elections. The increase after the fall of von Bülow was very large. In the partial elections for the Reichstag they gained substantial victories at Coburg, Zwonitz, Neustadt and other places. They triumphed in municipal elections in the large cities, Berlin, Altona, and Cologne and in the elections to the Diet in Saxony, Baden, Meiningen, and Saxe Weimar. In Saxony, where the three-class system had hitherto virtually excluded them from the Diet, they gained under the new plural system applied for the first time in 1909 25 seats out of 91, more than any other party. In Baden the Socialist vote increased from 30,000 to more than 80,000, and the number of deputies from twelve to twenty. In Meiningen they gained five seats, and in Saxe-Weimar four.

GREAT BRITAIN. The chief British socialist organization, the Independent Labor party, held its annual conference at Edinburgh on April 10. It passed a resolution upholding the alliance between labor and socialism and approving the work of the Labor party both in and out of Parliament. A resolution, aimed at Mr. Victor Grayson, the first unqualified Socialist returned to enter Parliament, declared that no salary would be paid any member who would not sign the party constitution. Mr. Grayson refused to surrender his independence as a Socialist. Four members resigned from the Council, Messrs. Keir Hardie, Ramsay MacDonald, Bruce Glasier and Philip Snowden, on account of certain socialist propagandists within the party whose methods they did not approve, but declared they would continue to work for the party in the ranks. The Social Democratic Federation, which plays no part in politics, held its Annual Conference at Bristol on April 9. The chairman's speech attacked the Labor party for its compromises, declaring that it might be satisfied with Liberal policies but that the true Socialists were not. A vote on the question of resuming the alliance with the Labor party brought out only two votes in its favor. The Fabian Society is affiliated with the Labor party and supported some of their candidates in 1909. The Church Socialist League, founded in 1908, had gained considerably in numbers, having at the time of its Annual Conference in 1909 about 1200 members.

RUSSIA. The Russian Social-Democrats acclaimed the Azeff affair as a blow to terrorism (see RUSSIA, paragraphs on *History*). They oppose the policy of indiscriminate violence and barren plots, and favor a rising of the masses and a general strike. The Azeff trial discredited the revolutionary wing by bringing out apparent proof that a chief of the revolutionary socialists who was said to have planned the murder of Von Plehve and the Grand Duke Sergius was an informer in the service of the police and had caused the hanging of a number of the revolutionists. The Russian Social-Democrats consider terrorism a mistake which is certain to benefit the reactionaries.

OTHER COUNTRIES. In Spain the Barcelona outbreak was, according to the Socialist Bureau

of Brussels, anti-militarist, and anti-capitalistic. The socialistic movement in Spain is related to various revolutionary agitations. The party gained eight seats in the May elections. The Moroccan war, the Barcelona riots and the execution of Ferrer tended to stimulate socialist activities during the year (see SPAIN, paragraphs on *History*.) In Sweden antecedent socialist agitation had contributed to the great general strike. German socialist propagandists had for some years past been active in Sweden and the German Social-Democrats contributed to the funds of the strikers. (See SWEDEN, paragraphs on *History*.) In Austria the Socialists secured 87 seats at the last general election. During the difficulty with Servia the Socialist deputies in the Reichsrath made a demonstration on behalf of peace. In Denmark the Socialists are the largest political party. In the general elections of 1909 they received one-third of the votes cast, an increase of 18,000 over their previous number. In the Netherlands the dispute between the revisionists and the extremists resulted in the triumph of the latter. (See NETHERLANDS, paragraphs on *History*.) In Norway the Socialist vote in the elections of October 23 rose from 8500 to 18,000. In Italy the March elections gave the Socialists a gain of 12 seats, bringing the number in the Chamber to 42. For the labor movement in the United States, see LABOR, AMERICAN FEDERATION OF; STRIKES AND LOCKOUTS; INJUNCTIONS, ETC.

SOCIAL SERVICE, AMERICAN INSTITUTE OF. A society organized in 1898 for the purpose of gathering from all possible sources facts of every kind bearing on the solution of social problems; to interpret these facts by ascertaining as far as possible their causes and effects; and to disseminate the resulting knowledge for the education of public opinion. The society maintains at its headquarters in Astor Place, New York City, a carefully indexed library which contains many valuable foreign books and pamphlets. From its foreign collaborators, who include representatives from nearly every country in Europe, as well as Japan, the society receives government documents and special reports, and keeps in touch with social movements abroad. A notable departure in 1909 was the organization of about 500 classes throughout the United States and Canada for the study of social questions. Weekly lessons are furnished, in which the highest economic and ethical principles are applied to the problems of collective living. The Institute furnishes to libraries the latest literature from the principal governments of the world, and the less accessible reports of semi-public societies bearing on social institutions. In 1909, Dr. Josiah Strong, the president of the Institute, and Mr. James Dangerfield, the special representative of the British Institute of Social Service, began a world tour, which will include all the principal capitals of the civilized world, in an endeavor to form similar institutions to this and others already existing. During the latter part of 1909 these gentlemen were in South America, where they visited the most important of the Latin American Republics. The officers of the Institute in 1909, were: Josiah Strong, President; Warner Van Norden, Vice-President; James Dangerfield, Honorary Director; John T. Perkins, Treasurer; James H. Ecob, Lecturer, and Washington Choate, Recording Secretary.

SOCIETY OF INTERNATIONAL LAW, AMERICAN. See ARBITRATION, INTERNATIONAL

SOCIOLOGY. The fourth annual meeting of the American Sociological Society was held at New York during the last week of December. Several other societies held sessions concurrently. (See POLITICAL ECONOMY.) During the two previous years the programme of the annual meeting had centred discussion on a single topic, but in 1909 a more varied set of papers was presented. The application of quantitative methods was discussed, both from the standpoint of census-taking and from that of the measurement of homogeneity in a mixed population. A considerable group of papers were read on some phase of psychological sociology, revealing decisively the newer and strong emphasis on the psychological aspects of sociological problems. The two other general topics of discussion were the religious factor in social evolution, and the teaching of sociology. A resolution was adopted instructing the president to appoint a committee of ten to consider steps toward the standardization of the teaching of sociology in this country. Professor Franklin H. Giddings, of Columbia University, was elected president for 1910.

The books of the year of special sociological interest included the following: *An Introduction to Social Psychology*, by W. McDougall; *Social Organization: A Study of the Larger Mind*, by C. H. Cooley; *Psychological Interpretations of Society*, by M. M. Davis, Jr.; *Man in the Light of Evolution*, by J. M. Tyler; *Le socialisme et la sociologie réformiste*, by A. Fouillée; *Folklore as an Historical Science*, by G. L. Gomme; *The Origin of Terms in Human Relationship*, by Andrew Lang; *The Wretches of Povertyville: A Sociological Study of the Bowery*, by I. L. Nascher; *Responsibility for Crime*, an investigation of the nature and causes of crime and a means of its prevention, by P. A. Parsons; *Parenthood and Race Culture*, by C. W. Saleeby; *Expansion of Races*, by C. E. Woodruff; *Mendel's Principles of Heredity*, by W. Bateson; *Poverty and Hereditary Genius*, by F. C. Constable; *Sociology, its Simpler Teachings and Applications*, by J. Q. Dealey; *Races of Men and Their Distribution*, by A. C. Haddon; *Source Book for Social Origins*, by W. L. Thomas; *Misery and its Causes*, by E. T. Devine; *Product and Climax*, by S. N. Patten; *Woman Through the Ages*, by Emil Reich; *The Groundwork of Eugenics*, by Karl Pearson; *Chinese Immigration*, by Mary Coolidge; *Divorce, a Study in Social Causation*, by J. P. Lichtenberger; *A Study of the Population of Manhattanville*, by H. B. Woolston.

Classified lists of the abundant periodical literature may be found in the quarterly *Economic Bulletin*, or in *The American Journal of Sociology*.

EUGENICS, a term proposed by Francis Galton in 1883 (*Inquiries into Human Faculty and its Development*), was recently defined by him as "the study of agencies under social control, that may improve or impair the racial qualities of future generations either physically or mentally." The advocates of eugenics maintain that in so far as the present means to human betterment—such as education and public hygiene—merely develop and preserve, but do not produce, talent and ability they are insufficient. Talent and ability, they say, must be inherited before they can be cultivated.

Eugenic measures will, the "eugenists" believe, tend to eliminate the unhealthy and feeble in body and mind, and will tend also to the numerical increase of persons of superior mental and physical endowment. They argue that while human knowledge and human responsibility are cumulative in civilized societies—each generation picking up and augmenting the traditions of previous generations—native ability tends to remain unchanged, except as man voluntarily interferes in his own behalf. They point out that "humane" impulses and practices so ameliorate the struggle for existence as that the degenerate and the "unfit" survive and propagate their kind. Upon its scientific side, eugenics is dependent upon biology and psychology; upon biology for data and methods in pursuing the study of inheritance, and upon psychology for the definition and measurement of ability and for means of registering the transmission of mental capabilities from parent to offspring. As an art, eugenics proposes practical measures which look to the purification of the stock. These measures include (1) dissemination of knowledge of the laws of heredity, (2) establishment of the social value of human grades and classes (soldiers, scholars, skilled laborers, the wealthy, the pauperized, and the like), (3) research into the biographical histories of thriving "eugenic" families, (4) the reform of public opinion in matters pertaining to marriage and productivity, and (5) the enactment of legislation for the protection of the community, by preventive measures, from vicious, insane, defective, tainted and diseased strains.

Galton was not only the founder of eugenics; he has also framed its ideals and, in part, formulated its methods. At present, much of its statistical work is carried on by the English school of biometricalists under the leadership of Professor Karl Pearson. A Eugenics Laboratory was recently established at the University of London. Many separate factors have contributed to the rapid growth of the doctrine and practice of eugenics within the last decade. Among them may be mentioned the deep current interest in the biological and psychological problems of heredity, the development of statistical and experimental methods in the study of evolution, public interest in the question of "race-suicide," and the outcome of earlier pioneering studies in eugenics which have emphasized, almost without exception, the importance of the hereditary factor in individual endowment of mind and body. Consult Galton, *Hereditary Genius* (2d ed., 1892), *Natural Inheritance* (1889), *Eugenics, its Definition, Scope and Aims* (1904), Ellis, *A Study of British Genius* (1904), Pearson, *The Scope and Importance to the State of the Science of Natural Eugenics* (2d ed., 1909), Bentley, *Mental Inheritance* (1909), Saleby, *Parenthood and Race Culture* (1909). Among periodicals and occasional publications may be mentioned *The Eugenics Review*, *Biometrika*, and the publications of the Francis Galton Eugenics Laboratory of the University of London.

SOILS. In previous reviews attention was called to the steps which were being taken to conserve the resources, and to increase the products of the soil, both by extending the tilled area and increasing the yield per acre. The rapid rise in price of farm products in recent years, has stimulated renewed activity in this

direction, not only in the United States, but throughout the civilized world. There has been great activity in the taking of an inventory of soil resources and possibilities, with a view to increasing agricultural production. It has been made evident that the supply of products of the soil has not kept pace in recent years with the demands, and the resulting era of high prices has developed both the need and the incentive for improved methods of soil culture, as well as for the extension of the cultivated area.

The investigations of the Bureau of Soils of the United States Department of Agriculture, tend to show that strictly there is no such thing as exhausted soils, but rather a decline in productiveness, which may be completely restored by proper methods of soil management, and European experience is cited to maintain this view, evidence being presented to show that better crops are obtained in many cases on soils which have been longest under cultivation. Experiments at the Ohio Station, covering a number of years, also show that very unproductive soils may be made highly productive under continuous culture, by proper methods of rotation, cultivation, and fertilizing. Soils tend to renew themselves in time from below, surface erosion by wind and water, and exhaustion by cropping being in part made up for by such renewal. Fertilizers and manures, with a suitable system of cropping, however, furnish quicker means than nature's processes of restoring or increasing productiveness.

Soil surveys taking account of soil resources and possibilities, and crop adaptations were actively carried on in various parts of the world during 1909. The Bureau of Soils of the United States Department of Agriculture was actively engaged in such work. Forty-five areas in twenty States were surveyed and mapped, 24,436 square miles, on a scale of one inch to the mile, and 76,180 square miles on a scale of one inch to six miles. The reconnaissance surveys were made on the Great Plains and mountain regions where more detailed surveys were not considered so necessary. The total area which had been mapped by the Bureau of Soils up to June 30, 1909, was 257,694 square miles. Several of the States organized soil surveys either independently or in co-operation with the national Bureau of Soils. Activity in this line was also reported in Russia, France, Germany, Belgium, Australia, India, and Africa.

Professor Bottomley, of Kings College, London, announced the discovery of a culture of organisms which assimilated free nitrogen in symbiosis with nonleguminous plants, but his claims have not been substantiated by the work of other investigators. Much new knowledge was acquired by investigations on the conditions affecting the transformation of nitrogen compounds in the soil—ammonification, nitrification, and denitrification. Among the interesting and important facts brought out was that partial sterilization of soils by heating or by means of antisepsics, such as carbon bisulphid, toluene, etc., increased the formation of ammonia and hence the fertility of soils. It appeared that the effect of the treatment was to aid the action of certain of the beneficial organisms by killing competing organisms, whose remains also serve as food for the ammonifying organisms. Heating, however, was shown to seriously interfere with nitrification. Investigations were reported which showed that the application of lime

strongly aids the formation of ammonia by bacterial action. Investigations at the Rothamsted Experiment Station, showed that the long-continued use of ammonium sulphate and of chlorids rendered the soil acid and stopped nitrification. A. R. Whitson, of the Wisconsin Experiment Station, showed that naturally acid soils are as a rule deficient in phosphates. In the development of the theories of soil fertility of the Bureau of Soils of the United States Department of Agriculture, O. Schreiner of that Bureau adduced further evidence to show that soil fatigue and unproductiveness may be the result of the accumulation of toxic organic compounds in the soil. Recent investigations by Bohland, Loew, May, and others indicate that colloids and enzymes play an important rôle in soil fertility, but their exact function has not yet been clearly defined.

An important contribution to the literature of soils was a treatise on soils by T. L. Lyon and E. O. Fippin, of Cornell University.

SOLAR SYSTEM. See ASTROLOGY.

SOLOMON ISLANDS. The British Islands lie in the western Pacific, and include Guadalcanar, San Christoval, Malaita, New Georgia, Yela, Tulagi, Santa Cruz, Vanicort, and the islands (Choiseul, Ysabel, Lord Howe's group, and those in the Bourgainville Straits) ceded by Germany in 1899. (See also GERMAN SOLOMON ISLANDS.) Area, 8357 square miles, population, Europeans, 210; natives, 150,700—Melanesians, mostly cannibals. Capital, Tulagi. Imports, 1907, £49,252, exports (cocoanuts, pineapples, bananas, copra, pearl shell, and ivory nuts), £51,602. Revenue, 1908-9, £10,604; expenditures, £12,618. Resident-Commissioner (1909), Charles M. Woodford.

SOMALILAND. The most eastern part of Africa, on the Gulf of Aden and the Indian Ocean. See BRITISH SOMALILAND; FRENCH SOMALI COAST; and ITALIAN SOMALILAND.

SONNENTHAL, ADOLF RITTER VON. An Austrian actor, died March, 1909. He was born in 1834, in Pesth and his early years were spent in a tailor's shop. His father, a tradesman, had been ruined in the troubles of 1848. His chief desire, however, was for the stage, and he became a voluntary supernumerary in a theatre in Vienna. He soon found regular employment as an actor in a provincial town, but when he appeared first in Vienna, he was hissed off the stage, chiefly because of his Hebrew parentage. In spite of this he was retained, and though strong antagonism was shown toward him for some time, he gradually won his way to public favor, and finally established himself as the favorite actor of Vienna. In 1854 he made a notable triumph as Hamlet, and from that time his advancement was rapid. He became, in 1856, a regular member of the Hofburg Theatre, and in 1881 the celebration of his 25th anniversary there was almost a national event. Sonnenthal visited the United States in 1885, and again in 1899 and 1902. His versatility and the simplicity and truthfulness of his methods, and the vividness of his interpretations stamped him as one of the greatest actors of modern times.

SOROLLA Y BASTIDA, JOAQUIN. See PAINTING.

SOUTH AFRICA, BRITISH. A group of British possessions consisting of Cape Colony,

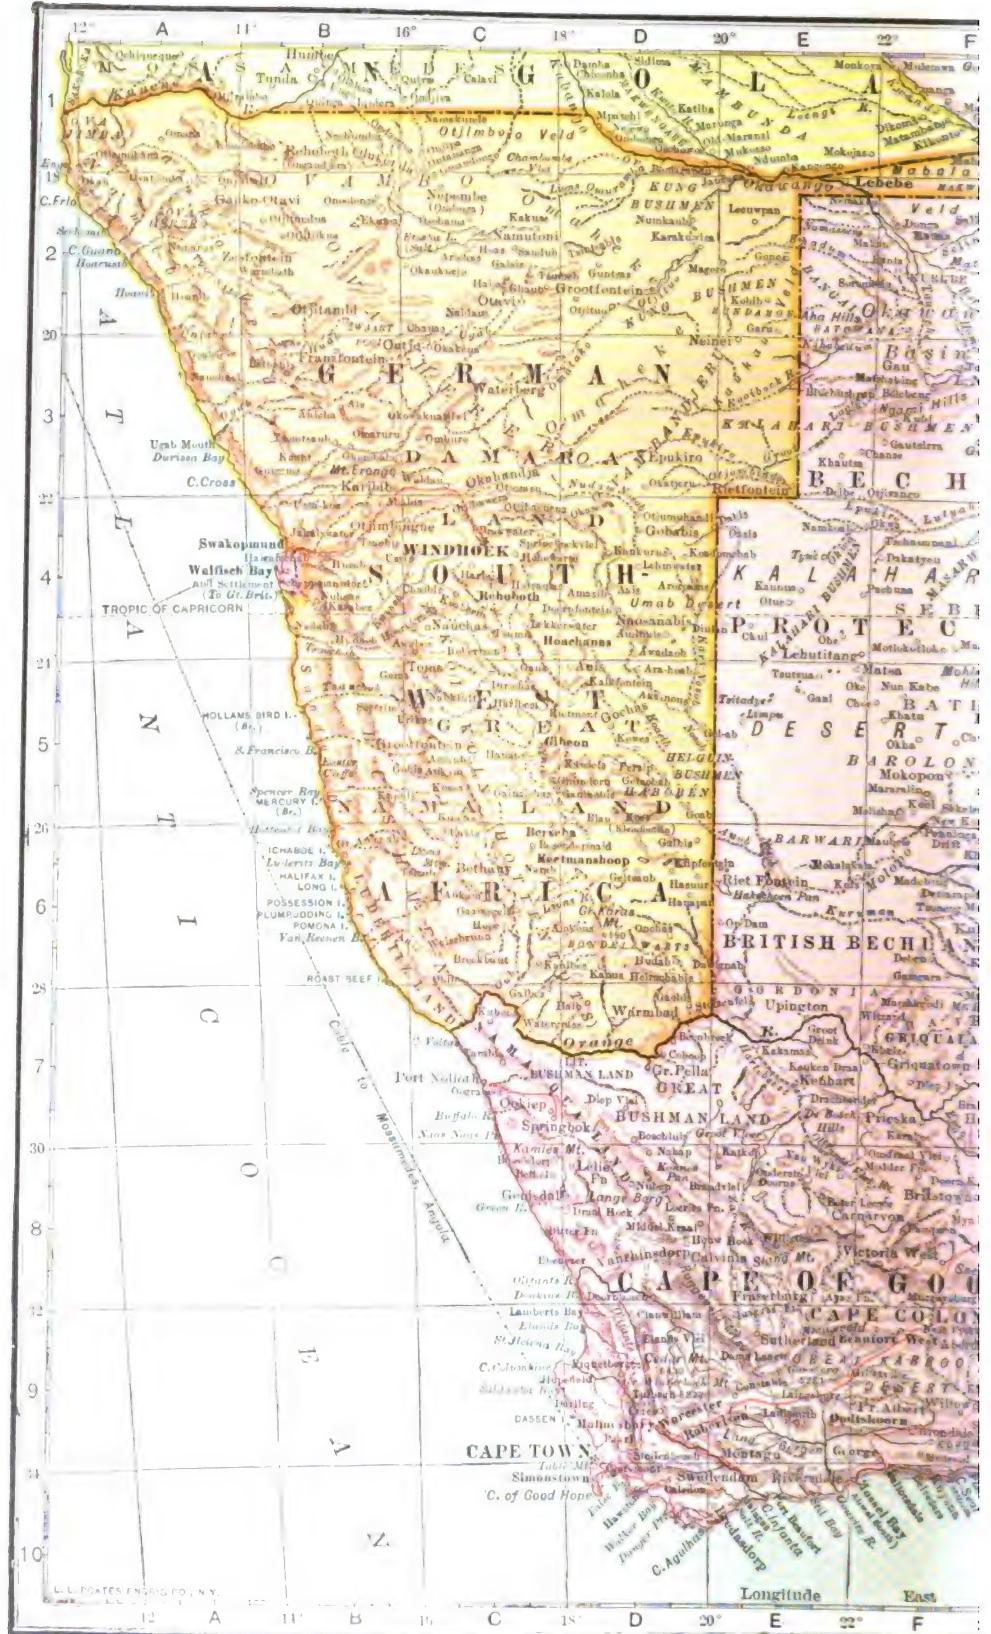

Natal (including Zululand), the Transvaal, Orange River Colony (these four self-governing), Southern Rhodesia, Basutoland, Bechuanaland Protectorate, and Swaziland. For statistical details and other information concerning the several colonies and protectorates, see the respective titles. The total area of British South Africa is estimated at over 914,000 square miles. In 1904 the white population numbered 1,135,016, and the colored, 5,198,175; the total estimated population in 1907 was 6,724,480. Importations into the territory embraced in the South African Customs Union were valued in 1907 at £25,920,278; in 1908, £24,438,266; in the two years Great Britain supplied 57 and 56.2 per cent. respectively; Germany, 7.6 and 8.7 per cent.; the United States, 7.8 and 8.2 per cent. Statistics for the first six months of 1909 showed the first increase in imports since the Boer War.

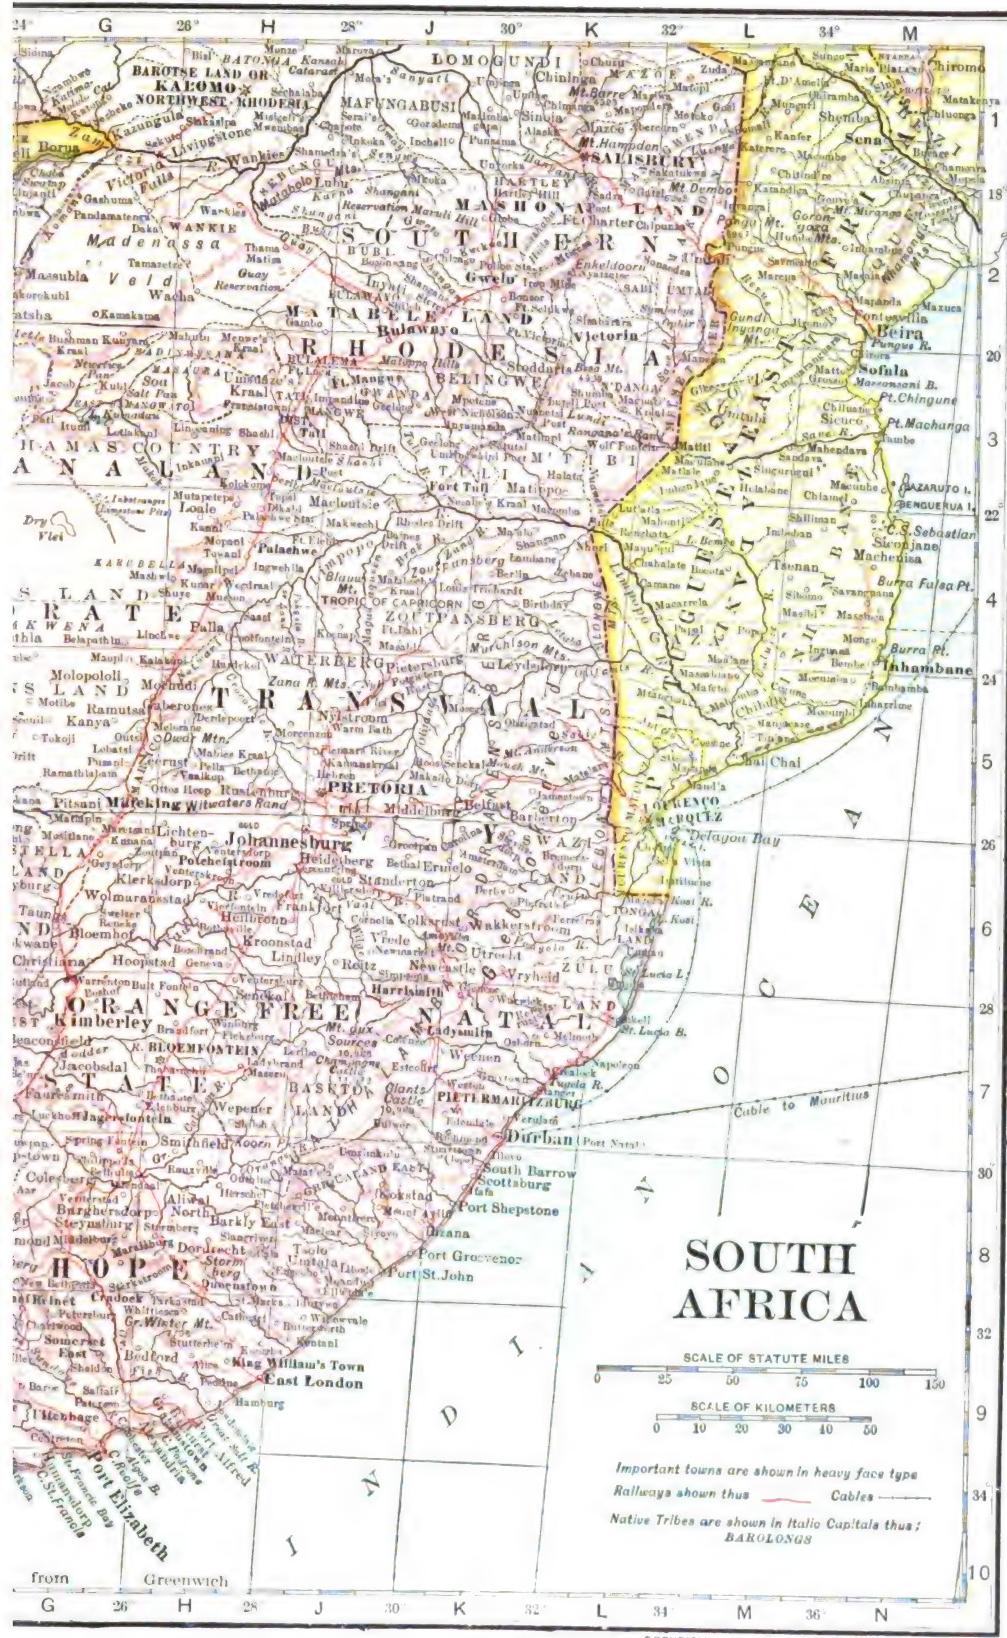

Beyond the limits of the colonies proper, administration is in the hands of the High Commissioner for South Africa (in 1909, and from March 2, 1905, the Earl of Selborne).

HISTORY

SOUTH AFRICAN UNION. The movement for closer union among the four colonies of South Africa culminated in 1908 in the convention for closer union, which met at Durban on October 9 of that year. It reassembled at Cape Town on January 11, 1909, and proceeded rapidly with the drafting of the constitution. This was completed in February and the convention adjourned. The draft of the constitution was submitted to the four colonial parliaments during March. Several points of difference revealed themselves in the discussion before the convention and afterwards in the separate colonies. In the first place there was a dispute as to the situation of the capital between the respective advocates of Pretoria and Cape Town, but this was finally settled by making Pretoria the administrative centre and Cape Town the meeting place for the Federal Parliament. The distance between the two cities is 48 hours. Although the particularist feeling of the colonies offered an obstacle from the first, there was substantial agreement between such divergent types of public men as Dr. Jameson, General Botha, Sir George Farrar, General Hertzog, Mr. Brown, and others, whose devotion to the common cause was significant. There had been, moreover, of late signs of a national tendency among the colonies, as shown in a greater degree of commercial co-operation between them, an increase in the interchange of products, and a growing appreciation of the need of a common system of defense. The chief opposition to the draft came from Natal, where most of the newspapers either advised its rejection or demanded amendments so radical as to amount to the same thing. There was also a vigorous opposition element in Cape Colony. The main difficulty was the reconciliation of the interests of the inland and coastal colonies, and at one time the opposition in Natal and on the part of the Bund in Cape Colony threatened the success of the measure.

The draft was accepted by the Transvaal and the Orange River Colony early in April, and after some delay and the insistence upon various amendments, passed both the Cape Colony and the Natal legislatures, and was referred

COPYRIGHT, 1902, BY L. L. POATES ENGB'G CO., N.Y.

to the National Convention which reassembled at Bloemfontein on May 3. Meanwhile, at the end of March, the natives of the four colonies had sent representatives to Bloemfontein, who, at their meeting, resolved to appeal to the Imperial government on behalf of the protectorates and to declare that Cape Colony alone accorded the native element a just and sympathetic treatment. The amendments passed by the Natal Legislative Assembly strengthened the position of the Provincial Councils and included provisions that there should be no reduction of the original number of representatives in the Union Parliament, that there should be free-trade in the interior, and that no amendments to the constitution should be made except by the absolute majority of both houses. The hostility to union in Natal was stimulated by the enemies of the Mozambique agreement, a large part of the commercial class resenting the Transvaal's pledge of a greater part of the exports and imports to a foreign port for a period of ten years. In Cape Colony the chief opposition came from Mr. Schreiner and his followers, who were opposed to the limitation of the native vote. The amendments demanded by the Cape Parliament aimed at a preference for all the rural constituencies in order to retain for the Boer element, which made up the rural population, its present advantages. They also demanded a hard-and-fast system of equality between the two languages. The revision of the draft was completed by the convention on May 8 and signed on May 9. A number of important amendments were adopted to conciliate the interests of the colonies. The amended act was adopted on June 2 by the Parliaments of the Transvaal and the Orange River Colony, and later in the month by Natal and Cape Colony.

At the beginning of July nineteen delegates from the colonies, including four of the Prime Ministers, arrived in London with a draft of the measure. It passed both Houses in the summer and received the royal assent on September 20. The chief objection to it in England was the clause limiting representation in the Union Parliament to persons of European descent. Mr. Schreiner, who arrived in England on July 3, presented a petition to Parliament signed by Sir Gordon Sprigg and other leading men, asking the Imperial Parliament to protect "the principle of freedom of opportunity to all civilized citizens of whatever race or color" and condemning this discrimination against the natives by the requirement of European descent as a qualification of membership in the Union Senate and Assembly. It declared that the native population would become disaffected and that they were already incensed because in determining the proportion of the Cape representatives in the Union Parliament, the 22,000 native voters were not counted. A good many of the natives, however, were opposed to Mr. Schreiner's course. (See CAPE COLONY.) Although there was much regret in the British Parliament in regard to this native clause, it was decided not to insist on any modification against the wishes of the delegates. It seemed unwise to run the risk of wrecking the measure, and it was argued that if the change was to be made it must originate in South Africa itself. The natives retain their franchise in Cape Colony, and it is provided that this shall not be changed except by a two-thirds vote of

both Houses of Parliament, but the qualification of European descent for membership in either House excludes them from the Union Parliament, although they may sit in the new Provincial Council.

CONSTITUTION. The union may be declared by royal proclamation within a year after the passage of the act under the name of the Union of South Africa, the names of the colonies to remain as at present except that the Orange River Colony becomes the Orange River Free State.

Executive. The executive authority is vested in the King, by whom a governor-general of the Union of South Africa shall be appointed at a salary of £10,000 a year. The Governor-General is assisted by an Executive Council, whose functions are advisory. As representative of the King he is the commander-in-chief of the army and navy. All bills passed by the Union Parliament require his assent and they may be disallowed by the King within a year. The Governor-General in Council shall control and administer native affairs and matters affecting the Asiatics.

Parliament. The legislature consists of a Senate and House of Assembly. The Senate has 40 members, eight chosen by each of the four provinces and eight nominated by the Governor-General in Council. Of the eight nominated Senators four are to be chosen for thorough acquaintance with the wants of the natives. Each Senator must be thirty years old and have lived five years within the limits of the Union; must be qualified to register as a voter for the Assembly members from the province, and must be a British subject of European descent. Each elected Senator must be the owner of real property to the value of £500 over and above mortgage. The House of Assembly is to consist of 121 members chosen directly by voters: 51 from the Cape of Good Hope, 17 from Natal, 17 from the Orange Free State and 36 from the Transvaal. They must be British subjects of European descent who have resided five years within the limits of the Union and are to be elected according to the present colonial franchise unless Parliament changes by law the existing qualifications, and voters shall not be disqualified solely for race or color in the Colony of the Cape of Good Hope except by a two-thirds vote of Parliament.

If differences arise between the two Houses they are to be decided in joint session by the majority. A special commission is created for delimiting the constituencies on the basis of European adult males. There is to be an automatic redistribution of seats every five years. When the number of members of the Assembly is 150, the representation of provinces is to be solely according to their European adult male population, and there is to be no further increase unless Parliament specially provides for it. There is the same rule as to the oath of allegiance or affirmation as for the British Parliament. The Union government assumes the debts of the colonies and the control of harbors, ports and railroads, a Minister and a permanent Advisory Board of three having charge of the last named. The Protectorates are to be taken over by the Union government at some future date, on terms set forth in the constitution. A Public Service Commission, with powers to be determined by Parliament, is

to be appointed by the Governor-General to deal with the appointment, discipline, retirement and superannuation of public officers.

PROVINCIAL GOVERNMENTS. The provinces are to correspond to the present colonies, and each is to have at its head an administrator (appointed by the Governor-General), an Executive Committee, and a Provincial Council consisting of 25 members, or a number equal to that of the members which the Province sends to the Union Parliament. The ordinances of the Provincial Councils are subject to Federal veto. Matters not specified are under the jurisdiction of the Union Government. The Provincial Council of the Province has jurisdiction in the following matters: Direct taxation for provincial revenue; borrowing money with the consent of the Governor-General in Council; education (except higher education) for five years, and until Parliament otherwise provides; agriculture, under limitations fixed by Parliament; hospitals, and charitable institutions; municipal institutions, divisional councils and other local bodies; local public works, with the exception of railroads, ports, harbors and other works which extend beyond the borders of the Province, subject to the power of Parliament to declare such works national; roads, bridges, etc., except when uniting two provinces; markets and pounds; protection of fish and game; the administration of punishment in the enforcement of law within the provincial competence; all other matters which in the opinion of the Governor-General in Council are local or private, or in regard to which Parliament delegates to the province power to legislate.

The election of Senators and of members of the executive committees of the Provincial Councils is to be by proportional representation, each voter having one transferable vote.

CAPITALS. The government offices are to be at Pretoria, and the Federal Parliament is to meet to Cape Town. The provincial capitals are to be the same as at present, namely, Cape Town, Pretoria, Bloemfontein and Pietermaritzburg.

LANGUAGE. Equal rights are prescribed for the Dutch and English tongues as official languages.

JUDICIARY. A Supreme Court of South Africa is to be established of which the colonial Supreme Courts are to be parts. Appeal is to lie in the Supreme Court of South Africa, and thence to the Privy Council in cases in which the Privy Council grants special leave.

At the instance of the South African delegates, the British government decided on May 31, 1910, as the date for the act to go into effect, and on December 3, a royal proclamation was published "that on and after the 31st of May, 1910, the colonies of the Cape of Good Hope, Natal, the Transvaal and the Orange River Colony, shall be united in a legislative union and government under the title Union of South Africa."

SOUTH ARABIA. See EXPLORATION.

SOUTH AUSTRALIA. A state of the Australian Commonwealth. Area, 903,890 square miles. Population at end of 1908, 407,179. On the same date the capital, Adelaide, had, with suburbs, 170,703 inhabitants. The executive authority is vested in a governor, appointed by the Crown and acting through a responsible Ministry. The Parliament consists of the Legislative Council (18 members) and

the House of Assembly (41 members). Women as well as men possess the suffrage. The Governor in 1900 was Admiral Sir Day Hort Bosanquet; the Premier, Treasurer, and Minister of Education, A. H. Peake. Parliament opened on July 22. The Premier, Mr. A. H. Peake, had formed a Ministry out of his own party, refusing the terms demanded by the Labor party as the price of its support. A resolution of no confidence was introduced by the Labor party in August, but was rejected by a majority of one. The Premier in his budget speech on September 23 announced a surplus of £291,000, which was to be applied to the reduction of the public debt. No new taxation was necessary. He referred to the flourishing conditions of trade and of agricultural and pastoral occupations. In October a Parliamentary Commission strongly recommended the building of 100 miles of railway, to open up important agricultural regions, and legislation was promised at an early date.

SOUTH CAROLINA. One of the South Central Division of the United States. Its area is 30,089 square miles. The population in 1909, according to a Federal estimate made in that year, was 2,142,084.

MINERAL PRODUCTION. The chief mineral productions of South Carolina are those connected with phosphate rock. The production in 1908 was 225,495 tons, valued at \$989,881. This was a decrease over the production of 1907, which was 257,221 tons, but it was greater in value than in 1907, which was \$980,867. Phosphate beds occur interruptedly in a belt, the lower limit of which extends along a line from a point near the source of the Wando River in Charleston county to the mouth of Broad River. The belt follows the coast, running back as far as 20 miles from the ocean. Phosphate rock occurs in two forms, as land rock and as river rock. River rock is mined from the river channels. Next to phosphate rock in value are the products of clay. In 1908 these amounted in value to \$615,248, a considerable decrease over the product of 1907, which was \$843,379. Stone is produced in considerable quantities, and gold also occurs. It was found in 1908 to the value of \$53,715 from 2598.46 fine ounces. A small amount of silver and copper is also found. The gold output of 1908 was obtained from two placers and five deep mines. Among other products are stone, gas, coke, gas and coal oil. Monazite is produced in the State. In 1908 there were mined 112,450 pounds, valued at \$13,494. Kaolin, fire clay, peat and tin are also found in the State, and there are deposits of iron in various places. The value of the mineral products of the State in 1908 was \$2,081,001, as compared with a value of the product in 1907 of \$2,305,203.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 37,041,000 bushels, valued at \$33,337,000, from 2,218,000 acres; winter wheat, 3,810,000 bushels, valued at \$5,563,000, from 381,000 acres; oats, 4,431,000 bushels, valued at \$3,190,000, from 211,000 acres; rye, 39,000 bushels, valued at \$55,000, from 4000 acres; rice, 476,000 bushels, valued at \$433,000, from 18,600 acres; potatoes, 765,000 bushels, valued at \$880,000, from 9000

acres; hay, 81,000 tons, valued at \$1,256,000, from 66,000 acres; tobacco, 32,000,000 pounds, valued at \$2,336,000, from 40,000 acres. The cotton crop in 1909 was estimated at 1,095,000 bales, which was a decrease from the crop of 1908, which was 1,118,000 bales. In the production of rice the State was exceeded only by Louisiana, Texas, and Arkansas. The rice crop of 1909 was slightly smaller than that of 1908, which was 480,000 bushels. The acreage of rice has greatly decreased in recent years. The number of farm animals in the State on January 1, 1910, was as follows: Horses, 87,000; mules, 144,000; dairy cows, 140,000; other cattle, 227,000; sheep, 56,000; swine, 699,000. The wool clipped in 1909 was estimated at 155,780 pounds.

FISHERIES. The value of the product of the fisheries of the State for the year ending December 31, 1908, was \$288,330. Of these products the most important in point of value was oysters, of which there were taken for market purposes 1,563,100 bushels, valued at \$136,790. Next in point of value were shad, of which 464,400 pounds, valued at \$40,730, were taken. Following in the order of the value of the products were sea bass, \$21,740; whiting, \$17,450; shrimp, \$11,980; and prawn, \$7270. Other fish taken in considerable quantities were shark, sheepshead, squireague or trout, terrapin and clams. The number of independent fishermen engaged in the fisheries of the State was 1634, with 925 wage-earning fishermen employed. There were 108 vessels engaged in the fisheries of the State, valued at \$47,891.

EDUCATION. The total school enrollment in 1908-9 was 334,902. Of these, white males numbered 74,034; white females, 79,773; negro males numbered 83,164, and negro females, 97,931. The average salary of teachers was, for white males, \$470.79 per year; for white females, \$249.13; for negro males, \$118.17, and for negro females, \$91.45. The total expenditures for free public schools in 1909 was \$1,898,885, and for State colleges, \$527,000. The first direct appropriation to free public schools since 1878 was made for the year 1908-9.

FINANCE. The report of the Treasurer for the fiscal year 1909 showed a balance in the treasury on December 31, 1908, of \$424,370. The total receipts for the fiscal year 1909 were \$2,772,850 and the expenditures for the same period amounted to \$2,805,138, leaving a cash balance on December 31, 1909, of \$392,082. During the year the State borrowed for current expenses \$500,000.

LEGISLATION. Among the measures enacted by the legislature of 1909 are those noted below: A measure was enacted requiring the electric railway companies to equip cars with closed vestibules in the winter time to protect motormen. A board of commissioners on uniformity of legislation was established. The manufacture and sale of commercial fertilizers was regulated. Unfair commercial discrimination between different sections of the State was prohibited, as well as unfair competition by selling goods in one locality at a low price to destroy business of competitors. It is made a misdemeanor to solicit orders for liquor. Banks in the State are required to accumulate a 25 per cent. reserve.

OFFICERS: Governor, M. F. Ansel; Lieutenant-Governor, T. G. McLeod; Secretary of State, R. M. McCown; Attorney-General, J. F. Lyon;

Treasurer, R. H. Jennings; Comptroller-General, A. W. Jones; Superintendent of Education, J. E. Swearingen; Adjutant-General, J. C. Boyd; Commissioner of Insurance, F. H. McMaster—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Ira B. Jones; Justices, C. A. Woods, Eugene B. Gary, D. E. Hydrick; Clerk, U. R. Brooks—all Democrats.

The State Legislature of 1909 was composed of 41 Democrats in the Senate, and 124 Democrats in the House. The State representatives in Congress will be found in the section *Congress* of the article UNITED STATES.

SOUTH DAKOTA. One of the North Central Division of the United States. Its area is 77,814 square miles. The population in 1909, according to a Federal estimate made in that year, was 498,077.

MINERAL PRODUCTION. The only mineral product of considerable importance in the State is gold. The total value of all products in 1908 was \$8,528,234, of which the gold produced was valued at \$7,742,200 from 374,529 fine ounces. This was a marked increase over the production of 1907, which was 200,186 fine ounces, valued at \$4,138,200. Gold is produced almost entirely in the Black Hills from the Homestake mine. Several new mills were built in 1908. Silver was produced in 1908 to the value of \$105,500 from 197,300 fine ounces, an increase over the production of 1907, which was 106,800 fine ounces, with a value of \$70,400. The only other mineral products of importance are stone, clay products, lead and natural gas.

The gold production in 1908 was estimated at 331,363 fine ounces valued at \$6,849,100. This was a decrease of \$892,300 in value from the production of 1908. The silver production was estimated at 205,800 fine ounces, valued at \$107,000.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 65,270,000 bushels, valued at \$32,635,000, from 2,059,000 acres; winter wheat, 47,588,000 bushels, valued at \$42,829,000, from 3,375,000 acres; oats, 43,500,000 bushels, valued at \$14,790,000, from 1,450,000 acres; barley, 19,910,000 bushels, valued at \$8,960,000, from 1,021,000 acres; rye, 578,000 bushels, valued at \$341,000, from 33,000 acres; flaxseed, 5,640,000 bushels, valued at \$8,516,000, from 600,000 acres; potatoes, 4,000,000 bushels, valued at \$2,520,000, from 50,000 acres; hay, 804,000 tons, valued at \$4,100,000, from 536,000 acres. In the production of flax the State ranks second, being surpassed only by North Dakota. The production of flaxseed was slightly smaller than that of 1908, which was 5,885,000 bushels. In the production of barley South Dakota occupies fourth rank. The crop of barley in 1909 was considerably smaller than in 1908, when it was 24,592,000 bushels. A large area of the State is devoted to the cultivation of fruit. The number of farm animals in the State on January 1, 1910, was as follows: Horses, 612,000; mules, 10,000; dairy cows, 656,000; other cattle, 1,341,000; sheep, 829,000; swine, 805,000. The wool clipped in the State was 4,334,880 pounds.

EDUCATION. There were enrolled in the schools of the State for the year 1907-8 117,609

pupils, which was 24.13 per cent. of the population. The average daily attendance was 72,363 and the number of teachers employed was 5555.

FINANCE. The report of the State Auditor for the fiscal year ending June 30, 1909, shows receipts, including cash on hand July 1, 1908, of \$4,148,734. The total disbursements during the year were \$3,358,847, leaving a cash balance on June 30, 1909, of \$789,886. The chief receipts were from the general fund, from the special and permanent school fund, and from taxation.

CHARITIES AND CORRECTIONS. The charitable and penal institutions of the State include a School for the Blind at Gary, a State Training School at Plankinton, a School for Deaf Mutes at Sioux Falls, a School for Feeble-Minded at Redfield, a Hospital for the Insane at Yankton, State Penitentiary at Sioux Falls, and Soldiers' Home at Hot Springs. In addition to these there is a Hospital for Insane Indians at Canton, established and maintained by the Federal government.

POLITICS AND GOVERNMENT. On January 20 Coe I. Crawford was elected United States Senator by the legislature. Senator Crawford had been the choice for Senator at the primary election in 1908. A two-cent fare bill was passed by the legislature and was signed by Governor Vessey on February 3. Opposition on the part of the railroads was at once begun and a temporary injunction was procured on February 4. An equal suffrage amendment to the Constitution passed the Senate on January 21 without debate and with but two dissenting votes. Measures were passed by the legislature regulating the sale of liquor, to be voted on in November, 1910, under initiative. A voluntary bank guaranty law was passed, but no attempt to comply with it has been made. Appropriation was made for completing and furnishing the new State House at Pierre. The people will vote on five laws in 1910, four being passed by the legislature, and one initiated by the people. In August President Taft issued a proclamation formally opening the ceded portions of the Cheyenne River and Standing Rock Indian reservations for settlement. Over 80,000 persons registered for the 10,000 homesteads available upon these ceded lands. At the election of 1908 the inhabitants of Butte county voted to divide that county into three parts, the southern portion to remain as Butte county, the northwestern as Harding and the northeastern as Perkins. These counties were organized in 1909 by Governor Vessey. The legislature also created Corson county out of a portion of the Standing Rock Reservation and it was duly organized with the county seat at McIntosh. Tripp county was also organized, with the county seat at Colombe. See ELECTORAL REFORM.

LEGISLATION. Among the measures enacted by the legislative session of 1909 are those noted below: A law was passed providing a maximum of two cents a mile for passenger fares. Railway companies are penalized for delay in adjusting claims; telephone offices are placed under the jurisdiction of railroad commissioners; provision is made for actions for injury by wrongful death, and the maximum of recovery is fixed at \$10,000. Standard forms of fire or life insurance policies are ordained; trusts and monopolies are prohibited; provision

is made for primary elections; a live-stock sanitary board is established; measures are taken to prevent the spread of disease among sheep and bees; pure food and pure drug laws were enacted; measures were passed regulating hotels; provision is made for the planting and care of forest trees, and the inspection of nurseries and imported trees to prevent the introduction and spread of injurious insects; an indeterminate sentence is allowed in some cases of first offense, and provision is made for a portion of a convict's earnings to be devoted to the support of his dependent family.

OFFICERS: Governor, R. S. Vessey; Lieutenant-Governor, H. C. Shober; Secretary of State, R. S. Polley; Treasurer, George Johnson; Auditor, John Herning; Attorney-General, S. W. Clark; Superintendent of Education, H. A. Ustrud; Commissioner of Lands, O. C. Dokken—all Republicans.

JUDICIARY. Supreme Court: Presiding Judge, Dick Haney; Justices, Charles S. Whiting, Elleson G. Smith, J. H. McCoy and Dighton Corson; Clerk, Frank Crane—all Republicans.

The State Legislature of 1909 was composed of 39 Republicans and 6 Democrats in the Senate, and 95 Republicans and 9 Democrats in the House. The State representatives in Congress will be found in the section CONGRESS of the article UNITED STATES.

SOUTHERN CHILD LABOR CONFERENCE. See CHILD LABOR.

SOUTHERN NIGERIA. A British colony and protectorate formed by the union of the former Colony and Protectorate of Lagos and the Protectorate of Southern Nigeria (since May, 1906). Area, 77,260 square miles; population, estimated in 1906, about six millions, Yorubas predominating. Capital, Lagos. There are government and mission schools. Agriculture is the chief industry, and the production of cotton is rapidly increasing; the output in 1903 was 500 bales (of 400 pounds each), in 1907, 9700 bales, in 1908, 550 (declined on account of drought), in 1909 (estimated), over 12,000 bales. Corn, palm oil and kernels, ivory, gum copal, and rubber are also produced. Imports and exports amounted in 1908 to £4,284,830 (Great Britain, £3,285,509), and £3,409,288 (Great Britain, £1,778,158) respectively, against £4,438,906 and £4,202,704 in 1907. Lagos (57,000 inhabitants), is the chief port, and has been greatly improved to accommodate the increasing tonnage. The town, however, is overpopulated, money is scarce, and the increase in the price of food-stuffs has resulted in "hard times." Other trade centres are Calabar, Opobo, Bonny, New Calabar, etc. A railway has been built from Iddo Island via Ilorin to Jebba (304 miles), and is being extended via Zungeru (N. Nigeria) to the line now under construction between Baro and Kano. Total tonnage entered and cleared (1907), 1,396,307. Revenue and expenditure (1908), £1,387,975 and £1,357,763, against £1,459,554 and £1,217,337 in 1907. Governor and Commander-in-Chief (1909), Sir Walter Egerton.

HISTORY. The Anglo-German Boundary Commission under Lieutenant-Colonel Whitlock and Major Haering, which began its work in December, 1908, continued, during the early part of 1909, its task of delimiting the frontier between Nigeria and the German Kamerun. They started in a single column on December 24, but

subsequently divided into several columns in order to take separate surveys. The natives were hostile and several engagements took place, in one of which the leader of a German detachment was wounded and two of his soldiers killed and others wounded. It was reported in April that the work was completed, and that a provisional line was agreed upon. A committee was appointed by the British government in February to inquire into the liquor trade with the natives, and it reported in October that the liquor sold was of reasonably good quality, and that no physical deterioration, diseases or other injurious consequences could be traced to its sale. The people were characterized as little inclined to habits of excess, and their condition was said to contrast favorably with the negroes of other colonies.

SPAIN. A constitutional monarchy of western Europe. Capital, Madrid.

AREA AND POPULATION. Total area, including the Balearic and Canary Islands and the Spanish possessions of the north and west coasts of Africa, 194,794 square miles; area of continental Spain, 190,050 square miles. Population (1900), 18,831,574; 9,087,821 males, 9,530,265 females; estimated population, December 31, 1908, 19,712,585. In 1908 there were 141,046 marriages, 657,699 births, 460,942 deaths; giving an excess of births over deaths of 196,759. Emigration (chiefly to Argentina, Brazil, Cuba, and Mexico), 130,640 in 1907. Population of principal cities (1909): Madrid, 539,835; Barcelona, 530,344; Valencia, 163,425; Seville, 145,721; Malaga, 112,971; Saragossa, 81,639.

EDUCATION AND RELIGION. In 1907 the total sum expended for education and the arts was 47,978,439 pesetas. There are about 26,000 public schools, with 2,000,000 pupils; 6000 private schools, 350,000 pupils. Every province has a secondary institution which prepares for the universities, of which there are nine. There is also a medical faculty at Cadiz, and a law faculty at Oviedo. Of the 3253 religious communities, 294 for men and 910 for women are devoted to education. A large proportion of the inhabitants are illiterate: 68.1 per cent, in 1889. With the exception of about 7000 Protestants and about 4000 Jews, the population is Roman Catholic. The state contributes annually about 41,000,000 pesetas to the support of the church. The religious orders have a large and influential membership and include about 10,630 monks and 40,040 nuns. Protestant worship is not tolerated in public, though a limited private liberty is allowed.

AGRICULTURE. Spain is the second largest producer of olives in the world, Italy being the first; of the 3,198,477 acres under this crop, 1,776,594 are in Andalusia. The average total yield is 1,400,000 tons of olives and 69,000,000 gallons of oil. From 1,000,000 to 3,000,000 kilos of oil are shipped annually to Italy, to be mixed with the Italian product and reshipped under Italian labels. Spain is third on the list of the world's greatest wine producers (France, Italy). The wine production of 1908 was 473,000,000 gallons, against 464,640,000 gallons in 1907. (See LIQUORS, FERMENTED AND DISTILLED.) The cereal production (1907) was as follows: Wheat, 100,331,000 bushels; corn, 30,000,000; oats, 16,998,000. The total area sown to rice in 1909 was estimated at 76,570 acres, with a total

production of 183,770 tons of rice in husk, or an average of 2.4 tons to the acre. The crop of sugar beets in 1908-9 amounted to 750,000 tons; of sugar cane, 250,000 tons. The live-stock statistics for 1908 were as follows: Horses, 445,776; mules and asses, 1,622,282; cows, 2,452,197; sheep, 16,119,051; goats, 3,355,404; swine, 2,120,177.

MINING. The total number of mine employees in 1908 was 118,201 (2725 women and 4373 boys). The value in pesetas of the output of the more important minerals in 1907 was as follows: Copper, 66,110,966; iron, 50,250,190; coal, 44,341,403; argentiferous lead, 35,206,081; lead, 23,214,259; zinc, 8,562,173; anthracite, 5,068,930; salt, 4,339,981; quicksilver, 3,720,018; lignite, 2,350,087; manganese, 1,059,899; iron pyrites, 1,055,315; silver, 1,010,307. The production of quicksilver in the Almaden mines in 1908 was 1,017,023 kilos, or 29,472 flasks; in the mines of Mieres, 50,565 kilos, or 1465 flasks; total, 1,067,588 kilos, or 30,937 flasks—4204 flasks less than in 1907.

MANUFACTURES. Among the principal industries are the manufactures of cotton textiles, sugar, paper, glass and olive oil. The cotton mills employ about 68,300 looms, with 2,614,500 spindles; 8000 looms, with 662,000 spindles, are used in woolen manufactures. There are 144 paper mills and 34 glass factories. About 30,000 tons of cork are prepared annually. The government holds monopolies of the fabrication and sale of matches and tobacco, each being granted to a company. There are 400 sardine factories, with 16,500 workmen; value of annual output, 15,000,000 pesetas.

FISHERIES. The total number of boats engaged in the sardine, tunny fish, and cod fisheries is about 14,700, with 67,000 fishermen. The value of the annual catch is estimated at 38,000,000 pesetas (1 peseta=19.3 cents).

COMMERCE. The imports for home consumption and exports of domestic produce are given in pesetas for three successive years as follows:

	1906	1907	1908
Imports....	933,945,957	947,813,634	968,552,856
Exports....	901,407,646	943,559,526	911,223,874

The principal articles of special commerce for 1907 were valued as follows:

Imports	Pesetas
Food substances	162,110,000
Cotton and cotton goods	154,764,000
Drugs and chemicals	111,269,000
Minerals and ceramics	101,433,000
Machinery	91,425,000
Animal products	86,461,000
Metal and metal manufactures.....	53,918,000
Timber	53,872,000
Textiles	26,727,000

Exports	Pesetas
Food substances	311,806,000
Minerals and ceramics	186,247,000
Metals and metal manufactures	153,852,000
Timber	69,710,000
Animal products	58,179,000
Cotton and cotton manufactures	57,292,000
Drugs and chemicals	36,223,000
Woolens	22,344,000
Paper	11,052,000

The wine export (1906) was valued at 71,610,428 pesetas. Exports of Malaga raisins to

all countries (1906), 11,440,504 pounds; 1907, 15,191,336; 1908, 12,577,423. Hides and skins showed (1907) imports, 20,296,700 pounds, exports, 16,247,006. Great Britain contributed (1907) imports to the value of 178,871,000 pesetas, and received exports valued at 205,285,000 pesetas; United States, 135,911,000 and 39,325,000; France, 130,350,000 and 163,633,000; Germany, 98,087,000 and 59,284,000; British India, 62,188,000 and 1,582,000; Portugal, 41,726,000 and 34,981,000.

COMMUNICATIONS. The Spanish railways are owned by private companies, but almost all have obtained government guarantees or subventions. The length of all railways in 1906 was 8196 miles; passengers carried, 45,062,312; goods, 23,711,852 tons; receipts, 308,903,514 pesetas; state duties on traffic, 21,164,852 pesetas. A new line is under construction between Valencia and Madrid, via Utiel, Motilla del Palancar, and Tarazona; construction and equipment to cost about \$6,000,000, exclusive of the government subsidy of 120,701 pesetas, or about \$21,000 per mile. The first section (54 miles), between Valencia and Utiel, is already completed and in operation. Length of telegraph lines in 1906, 20,749 miles; length of wire, 47,800; total number of messages carried during the year, 5,170,649. Number of telegraph stations, 1700; of post-offices, 4012; of telephone stations, 17,820. Postal receipts during the year amounted to 27,737,451 pesetas; expenses, 8,833,738. The merchant marine in 1908 comprised 504 steamers of 423,000 tons net, and 304 sailing vessels of 28,700 tons net. The shipping entered at Spanish ports in 1907 was 18,024,148 tons; cleared, 19,050,505. Work on the canal for the improvement of the navigation of the Guadalquivir was inaugurated March 25, 1909. The construction of this canal will allow steamers 427 feet length, 67 feet breadth, and 25 feet draft to go up the river 72 miles, or as far as Seville. Cost of construction up to July, 1909, about 3,000,000 pesetas. It is estimated that four years will be required to complete the work.

FINANCE. The unit of value is the peseta, valued at 19.3 cents. The revenue and expenditure for three successive fiscal years were as follows:

	1906	1907	1908
Revenue...	1,094,446,688	1,079,830,297	1,072,056,641
Expend're	992,863,222	1,009,443,561	1,025,908,048

The budget for 1909 estimated the revenues at 1,049,522,365 pesetas; expenditures, 1,043,790,854. The principal sources of revenue were estimated as follows: Direct taxes, 449,918,068; indirect taxes, 360,700,000; tobacco monopoly, lottery, etc., 191,550,000; from the public treasury, 25,415,250; national property, 17,939,047. Principal avenues of expenditure: Public debt, 407,853,141; War, 157,973,330; Public Works, etc., 99,544,891; Pensions, 74,519,000; Department of the Interior, 72,440,311; Education, 52,351,347; Marine, 48,787,405; Church, 41,236,455; Tax collecting, 34,424,781; Department of Finance, 17,486,526; Department of Justice, 16,432,964; civil list, 8,900,000; Department of State, 5,676,387. The budget for 1910 estimated the revenue and expenditure at 1,090,757,426 and 1,048,886,063 respectively.

The public debt stood, January 1, 1908, at 9,466,014,792 pesetas.

On December 19, 1908, the condition of the Bank of Spain was reported as follows: Cash in hand (gold, silver, and bronze), 1,292,506,000 pesetas; portfolio, 1,260,958,000; advances to Treasury, 150,000,000; property, 13,134,000; capital and reserve, 170,000,000; notes in circulation, 1,632,259,000; deposits and accounts current, 560,058,000. Savings bank deposits amounted December 31, 1906, to 202,655,000 pesetas. In 1906-7 no gold was coined; in 1906-7 no silver was coined.

NAVY. The effective navy in 1909 included: One second-class battleship of 9900 tons; 2 armored cruisers, 14,000 tons; one large protected cruiser, 9240 tons; 4 small protected cruisers, 14,050 tons; 4 torpedo-boat destroyers; 13 gunboats; 8 torpedo boats. In addition there were several school ships, dispatch boats, transports, etc. One second-class cruiser was building. A law passed January 7, 1908, provided for the construction of 3 battleships of 15,000 tons each, 4 gunboats of 800 tons each, 3 torpedo-boat destroyers, and 24 torpedo boats. It was provided that these vessels be built at Ferrol or Cartagena, and that these arsenals be reconstructed. On March 22, 1908, it was announced that the Minister of Marine had accepted the tender, as modified by the government, of the Spanish Shipbuilding Company, an Anglo-Spanish syndicate with which the English firms of Armstrong-Whitworth, John Brown, and Vickers-Maxim are associated. The company undertook to complete the work mentioned at a cost of about £7,000,000 and to build any further vessels required in the following seven years. In April, 1909, a transport steamer, built in Scotland for the Spanish government, was delivered at Ferrol.

ARMY. Service is obligatory but with numerous exceptions, and the army is maintained under the law of December 28, 1907, on a peace effective basis of 80,000, which may be increased at times to 100,000 if reduced on other occasions to compensate for the extra expense. Service is required for three years each in the active army and the first reserve, and six years in the second reserve. The military estimates of 1909 divided the army as follows: Infantry, 44,919; cavalry, 12,607, and artillery, 13,072. This army was divided into 50 regiments of regular infantry, 20 battalions of chasseurs, 4 African regiments, 2 regiments in the Balearic Isles, 2 regiments in the Canaries, recruiting cadres; 28 regiments of cavalry and 3 squadrons for foreign possessions; 13 regiments of field artillery, 1 regiment of siege artillery, 3 regiments of mountain artillery, all of which have 4 6-gun batteries, 14 fortress battalions, 1 central gunnery school, 1 central remount committee, and 4 companies of artificers. There were 4 regiments of sappers and miners, 1 pontoon regiment, telegraph and railway battalions, and other technical troops. The field artillery were rearmed with new Schneider field guns, and a number of these were sent to Melilla. The peace effective of the army in 1908 was 11,761 officers, 80,072 men, 17,205 horses, 1861 mules, and 521 cannon. There was a civil guard of 991 officers and 18,739 men, and the carabineros of 620 officers and 14,193 men. The total armed strength of the kingdom was estimated at 500,000 men.

GOVERNMENT. Spain is a constitutional monarchy, the executive resting in the King, who acts through a responsible council of Ministers; and the legislative power in the Cortes, a body composed of the Senate (360 members) and a congress of deputies (one to every 50,000 inhabitants). The Cortes meets annually. The present King, Alfonso XIII., was born May 17, 1886; was married, May 31, 1906, to Princess Victoria Eugénie of Battenberg. The heir-apparent, Prince Alfonso, was born May 10, 1907. Down to October 21 the Council was under the presidency of Señor Maura. On that date the Cabinet resigned and the succeeding Ministry was composed as follows: President of the Council (Premier) and Minister of the Interior, Señor Moret; State and Foreign Affairs, J. Pérez Caballero; Finance, Alvarado; War, Lieutenant-General Luque; Marine, Admiral V. M. Concas; Justice, Martínez del Campo; Public Instruction and Fine Arts, Barosso; Agriculture, Commerce and Public Works, Gasset. See below, paragraphs on *History*.

HISTORY

BARCELONA RIOTS. During the last week in July a series of riots, amounting almost to a popular insurrection, occurred at Barcelona. No adequate explanation of its causes has been given, but the chief factor was the widespread discontent aroused by the conscriptions for the Riff war (see *Morocco*, paragraphs on *History*.) The war itself was unpopular and the calling out of the reservists aroused much indignation. A general strike and a rising of the mob followed, the centre of the disturbance being Barcelona, which for years past has been the scene of anarchistic violence and the field of socialist and revolutionary propaganda. In the course of the twenty-five years ending in 1908, there were 114 instances of bomb-throwing, in which 47 persons were killed and 241 wounded. The riots began on July 26, but no serious damage was done till the following day. During the night of July 27 over thirty convents, churches, and religious buildings were burned down or partially destroyed. After a brief interval of comparative calm the insurgents began to fire on the troops on July 29 and were met by a severe artillery fire. On July 30 more pillage and incendiarism were attempted, but the military guard succeeded gradually in enforcing order throughout the main part of the city. The Captain-General issued a proclamation urging the people to return to work, and on the evening of August 1 the shops began to open and on the following day there was a return to normal conditions. According to the official figures the number of the killed was 86. The number of prisoners taken during the riots and later was reported at 1500, of whom 1200 were under sentence or awaiting trial at the end of September. The number of the insurgents was estimated at 30,000, but the actual pillaging and burning was carried on by a small number.

The published accounts were conflicting. According to some, murder, outrage, and the mutilation of the nuns were common features of the affair. Others said the mob, though bent on the destruction of church property, abstained from killing, robbery and other forms of violence, deliberately throwing back into the flames any valuables that they found. They

said the earlier reports were exaggerated and denied that persons were killed or maltreated, characterizing the acts of the incendiaries as mild. The following account is based on the account of an American officer, General H. A. Reid, who was in the city at the time: The riots began on Monday, July 26, and lasted throughout the week, that is, to August 1. Early in the morning of July 26 shots were fired but no serious harm resulted, and a little later industry was generally suspended, agents having passed from one establishment to another and persuaded the workmen to join in the general strike. Street cars were stopped and traffic was generally suspended. At noon the Civil Governor transferred his authority to the Captain-General of the province and district. A railway bridge to the northwest of the city was destroyed. On the following day the troops patrolled the streets, but during the night there was widespread pillage, in the course of which thirty-four churches and convents were sacked and destroyed, and eighty-five others were sacked and partly destroyed. The firing in the streets was almost constant. During the three following days there was more shooting and a number of buildings were burned, but the work of the troops became more effective, especially the artillery. It was agreed on Saturday, which was pay-day, that the working men should all be paid on Monday if they presented themselves. The effect of this was quieting and on the invitation of the Captain-General to resume work, the shops gradually opened. General Reid declared that the official reports as to the number of troops, civilians and police killed and wounded, greatly understated the facts, and he agreed with those who declared that the mob's treatment of the nuns and priests was inhuman and even unspeakably brutal. The destruction of the religious institutions temporarily rendered 5000 children homeless. The method of destroying the buildings was first to enter by force, and then, while the sacking was going on, to soak the building with kerosene. When the sacking was complete the building was set on fire. It seemed that the labor population coöperated with the anarchists, who were very numerous throughout Catalonia. The Radical Republicans, who were accused of teaching anarchist doctrines, were said to number about 25,000 in Barcelona and 75,000 outside. Their leader during the last fifteen years in Cortes is Le Roux, whose speeches have been of the firebrand order.

The explanations of the situation varied with the party opinions of those who offered them. Some declared the movement to be the result of the anarchists' attempt to foment among the Catalans class agitation, taking advantage of the government's present unpopularity. Premier Maura pointed out that nowhere outside of Catalonia had repression by force been necessary, and that out of over 900 communes, only 15 had been the centre of disturbances and more than half of these in Catalonia. He declared the riots to be a purely revolutionary anarchistic movement which took advantage of the departure of the troops and the anti-war feeling to arouse the masses. Another account asserted that the opinion prevailed among the rioters that a republic was to be declared and that the rising was aimed distinctly at the establishment of a new régime.

It was said that Barcelona was no more hostile to the war than any other city. The Attorney-General's report on the rising was published at the end of September. It referred to the widespread anarchist and socialist propaganda and declared that public meetings, publications, schools and even the popular entertainments had for a long time been made the means of spreading the doctrines of disorganization—free love, atheism, the view that property is robbery, that killing on the highway is no worse than in war, etc. Martial law in Barcelona was enforced at the beginning of the riots but was discontinued about the middle of August.

THE TRIAL AND EXECUTION OF PROFESSOR FERRER. On September 1, Professor Ferrer (q. v.), the well-known Socialist agitator and educator, the founder and head of the so-called "Modern School" in Barcelona, was arrested in the charge of being a notorious anarchist, implicated in the Barcelona rising. Incriminating documents were reported to have been found in his house concerning a revolutionary proclamation. His arrest aroused great resentment among the Socialists of all countries, especially in France, where a committee of prominent citizens was formed to protest against the arrest. Even among the more conservative element in foreign countries there was much criticism of the Spanish government's methods. The critics declared that the government was animated by political motives and that Ferrer's arrest was not justified by the evidence against him. In Spain the more moderate members of the Opposition charged the government with having given foreigners ground for criticism by confusing the general basis of Ferrer's prosecution, that is by mixing the question of liberty of conscience and freedom of speech with that of criminal agitation. They said that the government, having shut up the lay schools and exiled the professors, had given the general impression that it was not pursuing Ferrer the criminal agitator, but Ferrer the educator of the workingmen. On the other hand, the Minister of the Interior, Señor de la Cierva, declared that most of the attacks of the foreign press were really due to the propaganda of international anarchism and were founded on false representation. He said that those who demanded that Ferrer should be tried by civil court instead of by court-martial made two unwarrantable assumptions, first, that the government could interfere, and second, that military courts were not fair. Both the military and civil courts were, he said, independent, and beyond the interference of the government, being the absolute and sole judges of their own competence. Military law, moreover, gave the same guarantees as the civil law for the defense of the accused, and the same laws of evidence were observed. The sittings were held in public and the defense was entitled to counsel. The sentence was submitted to the Captain-General and his legal adviser, and if either disapproved it was referred to the Supreme Court Martial in Madrid. The trial of Ferrer began at 8 A. M. on October 13 and lasted five hours. The court was composed of one lieutenant-colonel as president, and five captains as jury. In the summary of the charges the prosecution declared that fifteen witnesses had proved that Ferrer had been involved in previous revolutionary at-

tempts and had been seen at the head of armed men in the Barcelona uprising. Counsel for the defense endeavored to show the weakness of the evidence against him, pointing to the prosecution's revival of old charges. In general he tried to establish the fact that Ferrer was the victim of political hate. The verdict of guilty was rendered and approved by the Captain-General, Auditor and Supreme Court. Meanwhile the Cabinet on examining the petition in favor of Ferrer had refused it. Ferrer was shot on the same day as his trial, October 13. When the news reached Paris, rioting occurred and a mob attempted to seize the Spanish Embassy. Several policemen were wounded and one person was killed.

MINISTERIAL CRISIS. On October 18 Señor Moret, the Liberal leader, criticised the government for its lack of foresight in the Moroccan campaign and for its bad management of the war and declared it responsible for the Barcelona riots, unduly severe in their repression, and unjust in the matter of the press censorship. He concluded that the continuance of the Ministry in office was injurious to the country. Señor de la Cierva spoke in defense of the Department of the Interior. Incensed by the Opposition's interruptions, he made an angry remark, which brought on an uproar in the Chamber. The Opposition demanded an apology. La Cierva offered to resign, but neither the Premier nor his other colleagues were willing to accept his resignation. They approved his words and preferred to resign rather than to throw him over. The resignation took place on October 21 and they were succeeded by the Moret Ministry, which was regarded as a moderate, safe, and, except for the well-known abilities of the new Premier, rather commonplace government. One of the first acts of the new government was to announce that no more executions would be permitted without complete government confirmation. The Cortes was prorogued on October 27. One of its most important measures before the close of the year was a decree for the simplification of municipal laws which, since 1877, had been encumbered by many ordinances. The object of the decree was to give back to the municipalities the liberties and responsibility they had originally possessed. The municipal elections on December 12 were, on the whole, favorable to the government.

OTHER EVENTS. For operations of the campaign in Morocco, see *Morocco*, paragraphs on *History*. The objects of Spain in the Moroccan war were defined by the government as consisting, first, in satisfaction for the murders of July 9; secondly, in obtaining guarantees for the execution of treaties and for the protection of Spanish interests, and finally, in reimbursement of the expenses of the military operations. The campaign, after the early reverses, turned gradually in favor of Spain, and by the early part of September the Riffs had been swept from a considerable tract of country in the neighborhood of Melilla. The attacks by the Moors in October were repulsed and by the end of that month the success of Spain was assured. On May 2 municipal elections were held throughout the country under the compulsory voting law of 1907. The new system brought out an unprecedented number of voters, between 80 and 90 per cent. of the electorate. In general, the returns were favorable to the

Liberal Republicans, Democrats and Socialists. In May, a bill was passed for the protection of maritime industries, including subvention of Spanish shipping laws and a tonnage tax on foreign vessels in Spanish ports. The attempts on the part of certain elements in the Opposition to attack the present integrity of members of the government were unsuccessful and resulted only in the further consolidation of the Liberal majority. But the latter became unpopular as a result of its war policy and its measures of repression after the Barcelona riots. The strict laws of press censorship aroused the opposition of the newspapers, whose managers met in September and protested against it. A delegation was sent with a petition to the King for the relaxation of the censorship. The Minister of the Interior replied to the criticisms of the Opposition newspapers in a circular letter to the provincial governors and to the press justifying the government's measures. In August there were reports that the Carlists intended to rise against the government, but this proved to be without foundation. Don Jaime de Bourbon, the new Pretender, showing no disposition to take part in it. (See CARLOS DE BOURBON.) On February 12 the King received King Manuel of Portugal, and on March 31 met King Edward at San Sebastian. On June 22 a third child, a daughter, was born to the royal couple. At the beginning of April new works were begun at the port of Seville in the presence of the King and Queen. A canal was planned for the admission of vessels of 10,000 tons and 25 feet draught.

SPEED, JOHN GILMER. An American editor and writer, died by his own hand, February 2, 1909. He was born in Kentucky in 1853, and graduated from the University of Louisville in 1869. After some years spent in engineering and mining, he became, in 1879, managing editor of the *New York World*, holding this position until 1883. After some years abroad, engaged in magazine work, he was in 1888 editor of the *American Magazine*. Following this he did, for several years, miscellaneous editorial and magazine work. Mr. Speed was an authority on horses, and in 1904 he was appointed commissioner to purchase breeding stock for the Philippines. He was also employed to inspect horses and mules purchased for the Panama Canal. Among his writings are *Keats' Letters and Poems* (Mr. Speed was a grand-nephew of the poet); *A Fall River Incident*, *The Horse in America* (1905).

SPELTER. See ZINC.

SPIRITUALISTS' ASSOCIATION, NATIONAL. An organization of various spiritualistic societies in the United States representing the developed force in the organizations of spiritualists. Active missionary work was carried on and many new temples were secured during the year for local societies. There are twenty-one States organized into State Associations and about 1000 local societies and churches. There are reported to be about 100,000 active members directly allied with the Association. The officers for 1910 were George P. Warne, President; Charles R. Schirm, Vice-President; George W. Kates, Secretary; Casius L. Stevens, Treasurer. The next annual convention will be held in October, 1910, in San Francisco.

STANDARD OIL. The history of the Standard Oil Company for 1909 is made up almost entirely of an account of the various prosecutions which it was compelled to defend. There was, first, the case involving the great fine imposed by Judge Landis in 1907. The Landis decision was reversed by the Circuit Court of Appeals in July, 1908; the government then applied to this same court for a re-hearing which was denied. A petition was next presented to the Supreme Court asking for a writ of certiorari to bring the entire case before that court for review. On January 4, 1909, this petition was denied, and the case reverted to the original court for retrial. In this trial, at which Judge A. S. Anderson, of Indianapolis, replaced Judge Landis, the rulings of the Circuit Court of Appeals revising the earlier decision governed the proceedings and proved important. These rulings were that conviction must be made only when it had been shown that the defendant knew that the six-cent rate it used was not the lawful, published rate; that the number of offenses was not the number of carloads, but the number of settlements between shipper and carrier; and that Judge Landis had abused judicial discretion by levying so heavy a fine. The case ended adversely to the government in March. The court directed the jury to bring in a verdict of not guilty, mainly on the ground that the government did not prove conclusively that the alleged 18-cent rate from Whiting to East St. Louis was the published, filed legal rate. While this opinion of the court was based upon the ruling of the Court of Appeals, it nevertheless aroused considerable adverse criticism. It was stated by critics that a great shipper does not get a discriminating rate without knowing it, that in the presence of the use of such a rate, knowledge of its discriminating character should be presumed, and that it is not sound sense to require the government to prove that the shipper knew the rate to be illegally favorable. The government claimed that its hands had been tied and the press almost unanimously declared that the rebate law needed amending.

On January 18 the case won by the State of Texas against the Waters-Pierce Oil Company, of Missouri, and the Standard Oil Company, of New Jersey, was sustained by the United States Supreme Court. In this case it was claimed by the State that these two companies had entered into a conspiracy leading to control by the latter, that they had prevented independent dealers from handling oil in the State, had maintained prices, and had used unfair competitive methods, and that they constituted a monopoly, handling 95 per cent. of all oil and oil products sold in the State. A fine of \$1,623,000 was imposed and the defendants forbidden to do business in the State. The fine with costs of about \$200,000 was paid in April. Late in October it was announced that the Texas Oil Producing and Refining Company, controlled by John W. Gates, had arranged to take over the Texas property of the Waters-Pierce Company. On October 26, the Texas Supreme Court handed down a decision ousting from the State the Security Oil Company and the Navarro Refining Company, two subsidiaries of the Standard, and fining them \$175,000. Receivers were appointed to take charge of the \$4,000,000 worth of property.

The suit begun in 1907 by the State of Mis-

souri against the Waters-Pierce Oil Company, and other cases, that it is to be presumed that the parties to a contract or combination intend the inevitable results of their acts, "and neither their actual intent nor the reasonableness of the restraint imposed may withdraw it from the denunciation of the statute." Another rule from that same case is that "the exchange of the shares of competitive corporations for shares of a single corporation, the necessary effect of which is a direct and substantial restriction of competition, constitutes a combination that is declared illegal by the Sherman law." The history of the Standard Oil Company is then reviewed. The decision thereafter ruled out the first two contentions of the defense that the defendant corporations had not been competitors since 1879; and that the stockholders of the principal company, being the joint owners of the subsidiary companies, had a right to convey their stock to the former and Congress had no power to restrict such acquisition. And overruled two other contentions, that the oil companies were private concerns, whereas the railroads combined by the Northern Securities Company were charged with public duties and were therefore peculiarly subject to Congressional regulation; and that, if there had been any restraint of trade since 1899 it had been neither direct nor substantial. It found the combination illegal not only as in restraint of trade, but also as a monopoly forbidden by the second section of the Sherman law.

At the close of the year Oklahoma was vigorously prosecuting a case against the Standard and certain subsidiaries doing business in that State.

Far the most important case against the company was the dissolution suit begun in the United States Circuit Court at St. Louis in November, 1906, and concluded November 20, 1909. Besides the Standard Oil Company of New Jersey, the defendants named in this suit included seventy subsidiary companies, and J. D. Rockefeller, Wm. Rockefeller, H. M. Flagler, H. H. Rogers, J. D. Archbold, O. H. Payne, and C. M. Pratt. The testimony covered 10,000 pages, and other evidence 15,000 pages. The arguments in the case occupied the week of April 5-12; voluminous briefs were filed; and the decision was 20,000 words in length. The decision, which was rendered at St. Paul, Minn., was written by Justice Sanborn, and concurred in by Justices Van Deventer, Hook and Adams. The government's special attorney was Frank B. Kellogg, of St. Paul. The court, in the first place, upheld the Sherman Anti-Trust law as a rightful exercise of the power of Congress to control commerce between the States and with foreign nations. It then said, "Test of the legality of a combination under this act is its necessary effect upon competition in commerce among the States or with foreign nations. If its necessary effect is only incidentally or indirectly to restrict that competition, while the chief result is to foster the trade and increase the business of those who make and operate it, it does not violate that law. But if its necessary effect is to stifle or directly and substantially to restrict free competition in commerce

. . . . it is illegal within the meaning of that statute."

The next point in the decision lays down an important principle of judicial discretion. "The power to restrict competition in commerce . . . vested in a person or an association of persons by a combination is indicative of the character of the combination, because it is to the interest of the parties that such a power should be exercised, and the presumption is that it will be." The court cited among the rules for interpreting the law the principle laid down in the Northern Securities

and other cases, that it is to be presumed that the parties to a contract or combination intend the inevitable results of their acts, "and neither their actual intent nor the reasonableness of the restraint imposed may withdraw it from the denunciation of the statute." Another rule from that same case is that "the exchange of the shares of competitive corporations for shares of a single corporation, the necessary effect of which is a direct and substantial restriction of competition, constitutes a combination that is declared illegal by the Sherman law." The history of the Standard Oil Company is then reviewed. The decision thereafter ruled out the first two contentions of the defense that the defendant corporations had not been competitors since 1879; and that the stockholders of the principal company, being the joint owners of the subsidiary companies, had a right to convey their stock to the former and Congress had no power to restrict such acquisition. And overruled two other contentions, that the oil companies were private concerns, whereas the railroads combined by the Northern Securities Company were charged with public duties and were therefore peculiarly subject to Congressional regulation; and that, if there had been any restraint of trade since 1899 it had been neither direct nor substantial. It found the combination illegal not only as in restraint of trade, but also as a monopoly forbidden by the second section of the Sherman law.

Finally, the decision issued a very broad injunction against all the defendants, 33 of the 70 subsidiary companies being excepted. The discontinuance of the combination and its operations was ordered; the officers or agents of the Standard Oil Company of New Jersey were enjoined from voting the stock in any of the subsidiary companies or otherwise exercising control over them; the subsidiaries were enjoined from paying any dividends to the company; the individual defendants were forbidden to continue the combination; the subsidiaries were forbidden to enter a like combination, the court specifying various ways in which this might be done and enjoining each.

While it was generally conceded that the decision gave ground for criminal proceedings against the individuals named in the indictment, it was also clear that if such suits were to be brought they would not be begun until the appeal in this case was decided. On December 17 such an appeal, alleging 65 errors, was filed, thus taking the case to the United States Supreme Court. Meanwhile the press had discussed the various possibilities of reorganization under a foreign company beyond the immediate control of Congress and American courts. At the same time it was made apparent that should the Supreme Court sustain the lower court great numbers of suits would be brought against the Standard for damages under section seven of the Sherman law.

STARIN, JOHN HENRY. An American capitalist and ship owner, died March 22, 1909. He was born in Sammonsburg, N. Y., in 1825. After an academic education he became a drug clerk. From 1848 to 1852 he was postmaster at Fultonville, N. Y. In 1856 he removed to New York City and began the sale of drugs and medicines. He became acquainted with Commodore Vanderbilt, and was by him appointed a freight agent on his lines. Starin

soon conceived the idea of organizing a general freight agency to collect and distribute freight about New York harbor. This plan was highly successful. During the Civil War he obtained valuable contracts for transportation from the government. Following the war he built up an extensive business around New York City. He established the resort of Glen Island, for pleasure seekers. In 1876 Mr. Starin was elected to Congress, where he served two terms. He was a member of the Rapid Transit Commission of New York City throughout its existence.

STARS. See ASTRONOMY.

STATE BANKS. A report of the National Monetary Commission showing the condition of 11,292 State banks was issued on April 28, 1909. The total resources aggregated \$3,293,346,000, or 15.6 per cent. of the total resources of all banks in the United States, and equal to slightly more than one-third the total resources of the 6977 national banks on that date.

The State bank resources included the following items: Loans and discounts, \$1,993,428,000; bonds and other securities, \$288,591,000; mortgages owned, \$77,279,000; due from national banks, \$326,431,000; due from banks other than national, \$160,078,000; cash on hand, \$219,824,000. The loans and discounts equalled 20 per cent. of those of all banks in the country; and the cash, 15 per cent. of the total held by all banks. The liabilities included: capital, \$410,718,000; surplus, \$150,795,000; undivided profits, \$90,362,000; individual deposits subject to check, \$1,395,773,000; savings deposits, \$449,276,000; demand certificates of deposit, \$117,998,000; other deposits, certified and similar checks, \$476,260,000. State banks held 17 per cent. of individual deposits in all banks in the United States, as compared with 23 per cent. in 1908. The aggregate resources and liabilities of State banks were one-fifth less in 1909 than in 1908; capital and deposits decreased to an equal extent, and loans and discounts fell by about 15 per cent.

Only a few State banks are found in the New England or Eastern States, while 3312 are found in the Southern States, 3717 in the middle Western, 3026 in the Western, and 831 in the Pacific States. Missouri had 942 State banks, Kansas 774, Minnesota 637, Nebraska 629, Oklahoma 617, Wisconsin 462, Georgia 437, and Kentucky 412. While comparison shows the number of State banks to have been slightly greater in 1909 than in 1908, their aggregate banking power was considerably less, and their relative importance decidedly less than in 1908.

STATE CHARITY CONFERENCE. See CHARITY ORGANIZATION.

STEAM ENGINES. The advent of the steam turbine (q. v.) did not eliminate the reciprocating steam engine from mechanical engineering, for it was realized that it had its place and function, especially in certain applications to which the turbine was not suited. Nevertheless, few important advances in steam engine construction were to be recorded for 1909 and the years immediately preceding, for standards of design and type had been reached where improvement apparently was not possible. But by 1909 a consideration of the operation of steam engines and low pressure turbines led to the conclusion that by a combination of the two the efficiency of the plant could be greatly

increased. Thus with a non-condensing engine a steam turbine may be used to run with the exhaust steam and operate more effectively than the high pressure engine working on the live steam, while the use of turbine between the low pressure cylinder of a compound or triple-expansion engine and its condenser results in a clear gain which is really remarkable. A striking instance of this was reported in 1909 from the Fifty-ninth Street power station of the New York Interborough Railway, where is generated the power for the subway.

The engines at this station are of the Allis-Chalmers cross-compound type direct connected to the generators, and they have a maximum economical rated power of 6000 kilowatts. When a steam turbine was interposed between the low pressure cylinder and the condenser, not only could the engines be run at overload with an economical water rate, but at increased efficiency, and the power output was practically doubled, about 16,000 kilowatts being developed. Just as the high pressure engine made possible great gains in power, so it was demonstrated that the addition of the turbine takes care of the expansion of the steam at the lower pressures which would be impossible even with a low pressure of unduly large size. This combination was being used with success in the reversing rolling engines of steel works, in winding engines and various power plants, not to mention the largest steamships under construction in 1909. See STEAM TURBINES and SHIPBUILDING.

STEAM TURBINES. Both on land and on sea the steam turbine had developed by 1909 to a point where its application had almost become standard for many classes of work. Thus in large alternating current plants, such as those of the Waterside station of the New York Edison Co., and the Interborough Rapid Transit where a large turbo-generator had been in operation for several years, good results were secured, while in smaller installations with turbines of less than 300 horse power used for various purposes many advantages were found. Perhaps the most significant work was carried on with low pressure turbines in connection with reciprocating engines, using the latter with the higher pressures and the turbines with the exhaust steam. See STEAM ENGINE.

The steam turbine in order to secure its greatest efficiency must be operated at considerable speed. Thus an electric generator can be designed where the high speed of rotation of the turbine shaft can be utilized, but in the case of the propeller of a vessel the high speed of rotation becomes an embarrassment, for the screw unlike the turbine does not operate at its highest efficiency when the rate of rotation is rapid. Three solutions of the difficulty were suggested. One was to install turbo-generators and then transmit the current to slow speed electric motors on the propeller shaft, a second was to employ a hydraulic reduction drive with a hydraulic turbine direct connected to the steam turbine and the other direct connected with the propeller shaft, and finally there was the mechanical reduction gear whereby gearing was employed to transmit the power and reduce the velocity of rotation. For the first the Fire River Shipbuilding Co., of Quincy, Mass., stood ready to construct a 26,000 ton battleship, while the hydraulic reduction was

advocated by European engineers, and the mechanical reduction was announced in 1909 after a number of experiments by American engineers made at the Westinghouse Works. A simple reduction of speed by gearing where limited power or low speeds is involved presents no difficulties, but given the horse-power of such a steam turbine installation as on the *Mauretania* (18,000 horse-power per shaft), the transmission and control becomes a serious problem. A scheme devised by Rear-Admiral George W. Melville, former chief engineer of the U. S. Navy, and John H. MacAlpine, was accordingly developed and tested in experiments on a large scale with considerable success. The method was the use of helical gearing or toothed wheels where the teeth which mesh into each other were cut in the form of a steep spiral so that the wheels roll into contact without any jar or shock. The smaller and more rapidly rotating pinion wheels are in the turbine shaft and they communicate their motion to a larger wheel in the propeller shaft. In order to obviate the end thrust due to the obliquity of the teeth there are two sets of gears on each shaft with the spirals running in opposite directions. Now despite the accuracy with which gears can be cut with modern machine tools it was impossible to secure uniform contact through the entire length of the gear, so that a special form of support for the frame carrying the bearing had to be devised in order to secure equalization of the tooth contact pressures.

The gear was tested on a large scale with a hydraulic brake at different speeds with horse power varying from 3712 to 5927. It was found that at approximately 5000 horse power, with the turbine running at 1500 revolutions per minute and the driven shaft at 300 revolutions per minute, the efficiency of the gear was more than 98.5 per cent. An efficiency of 98 per cent. at a load of 3000 horse power and 1000 revolutions of the turbine was shown, and 95 per cent. at a load of only 824 horse power and 750 revolutions of the turbine.

The economy of such an arrangement when applied to the propellers of a steamship was most evident, and it was calculated that, with the lower speed of revolutions secured with the reduction gear, propellers could be installed with an efficiency of not less than 65 per cent., which in the case of a vessel like the *Mauretania* would mean a saving of about 15 per cent. or a gain of one-seventh in the coal consumption. Furthermore there would be other economy in the construction and operation while there would be available with the same bunker space coal for a much greater radius of operations.

STEEL. See IRON AND STEEL and CHEMISTRY, INDUSTRIAL.

STELLAR EVOLUTION. See ASTRONOMY.

STEWART, WILLIAM MORRIS. United States Senator (Republican) from Nevada, 1863-1875, and 1887-1905, died April 23, 1909. He was born in Lyons, N. Y. in 1825, and studied for a time at Yale College. He also studied law and having removed to Nevada was, in 1852, chosen District Attorney of Nevada City. In 1854 he established a law partnership with Henry S. Foote in San Francisco. He was financially interested in mining ventures, and when Western Utah was organized into Utah Terri-

tory he became prominent in its government. Nevada was made a State in 1864, and Stewart was elected Senator. He was a friend of President Lincoln and was said to have received the last words written by Lincoln. Senator Stewart was the author of the Fifteenth Amendment to the Constitution. He declined an appointment to the Supreme Court from President Grant, and in 1875 returned to care for his business interests. He was re-elected to the Senate in 1887, and became prominent in the debates on free silver. He coined the phrase "The crime of '73." In 1892 he founded a free silver party in Nevada, but in 1900 he returned to the Republican party. He published in 1908 an interesting volume of reminiscences.

STIRLING, JAMES HUTCHINSON. A Scotch metaphysician, died March 19, 1909. He was born in Glasgow in 1826 and was educated at Glasgow University. He practiced medicine until 1851 and lived on the continent of Europe from 1851-57. Returning to Scotland he devoted his time to philosophical writing. Among his works are *The Secret of Hegel* (1865); *Sir William Hamilton* (1865); *Lectures on the Philosophy of Law, etc.* (1873); *Philosophy in the Poets* (1885); *Philosophy and Theology; Gifford Lectures* (1896); *What is Thought? or The Problem of Philosophy* (1903).

STÖCKER, ADOLF. A German theologian and politician, founder of the Christian Socialist party, died on February 8, 1909. He was born in 1835. He studied theology and philosophy at Halle and Berlin, entered the ministry and in 1874 became cathedral preacher and court pastor in Berlin. In 1879 he was elected to the Prussian Chamber of Deputies, and from 1881 to 1893 was a member of the Reichstag. He took a strong stand against the Jews, and in 1890 as a result of his Socialistic activities, he was removed by the Emperor from his place as court pastor. In 1896 he left the Conservative party, and, from a considerable body of followers, organized the Christian Socialists. He became editor of the *Deutsche Evangelische Kirchenseitung* in 1892. He wrote *Christlich Sozial* (1884 and 1890); *Wach' auf evangelisches Volk!* (1893); and *Dreizehn Jahre Hofprediger und Politiker* (1895).

STOCK EXCHANGE. See EXCHANGES and FINANCIAL REVIEW.

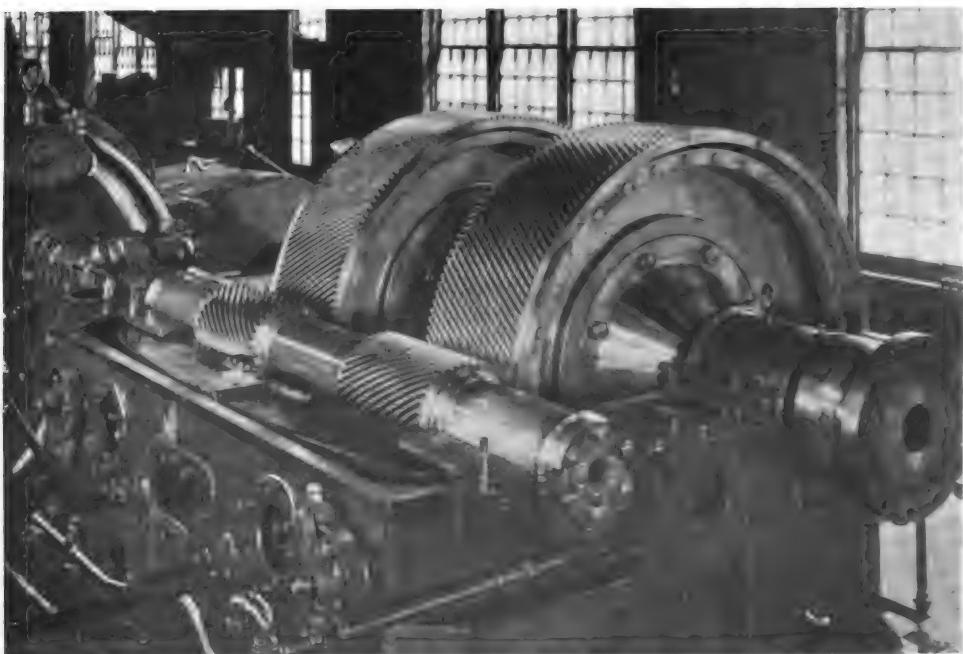

STOCK RAISING. Some of the principal features of the live-stock trade in the United States during 1909 were the shortage of fed cattle owing to the high price of corn; the heavy movement to market of range cattle; the lightest run of hogs since 1903; heavy receipts of sheep and lambs; shrinkage of export trade owing to high prices in Chicago and the competition in British markets of Argentine beef. The official figures of the Union Stock Yard and Transit Co. show that the receipts of cattle at Chicago during the year were 2,929,805, a decrease of 109,401 from receipts of 1908. The number of hogs received was 6,619,018, besides 418,007 head received direct from the packers. The decrease in hogs from the figures of 1908 was 1,512,447; the number of calves received was 409,714, a decrease of 11,957; horses 91,411, a decrease of 727; sheep 4,441,424, an increase of 89,535 over 1908. The total value of this stock was appraised at \$339,614,200, an increase of \$24,047,682. The shipments from

REAR ADMIRAL GEORGE W. MELVILLE

GEORGE WESTINGHOUSE

JOHN H. MACALPINE

GEAR AND PINION WITH COVER OF UPPER HALF OF FLOATING FRAME REMOVED
MELVILLE-MACALPINE REDUCTION GEAR FOR THE STEAM TURBINE

Chicago showed the following decrease from the figures of 1908; cattle 87,657, calves 1766, hogs 205,765, sheep 273,751, horses 45.

It was an expensive year for the cattle feeder as low prices prevailed in the early part of the year. Range cattle had been transferred to the feed lot, which increased the demand for corn and helped to raise its price. As corn rose in price there was less profit in feeding and cattle were short-fed and hurried off to market. When the winter crop had been cleaned up prices improved and range cattle reached high-water mark in their history. During the year high prices were reached for all kinds of livestock, which is an indication that the supply is diminishing. For several years animals which should have been kept for breeding have been slaughtered and furnished a large export trade and there is danger of a much reduced beef supply in the near future, although the cattle supply at the five principal markets was larger than in 1908. The gains were made at Kansas City and Omaha. At Chicago there was an actual loss. The movement due to liquidation of the western ranges was about over at the end of the year and portends a loss in receipts at all of the markets for 1910.

Exports of cattle for slaughter which rose to 593,000 in 1904 declined to 208,000 in 1909, likewise the exports of dressed beef fell from 733,000,000 pounds in 1906 to 419,000,000 in 1909. Since 1900 the number of cattle has not increased, while the population has increased 20 per cent. For a discussion of meat prices see *Foods AND NUTRITION*.

The supply of hogs was 3,000,000 less than in 1908; half of the loss was at Chicago. There were at the close of the year 2,000,000 less hogs in the country than the year previous, but the average value was about 50 cents per head more. The exports of pork and pork products decreased from 1,465,000,000 pounds in 1906 to 1,053,000,000 pounds in 1908. The fall in the price of hogs in 1908 sent to the shambles thousands of breeding animals. The liquidation was felt in the autumn of 1909 by the continual upward movement of prices, though the hog and lamb market was good throughout the year. The sheep supply was 300,000 larger than in 1908. Horse values were higher than in 1908 and the quality was poorer.

In 1909 the number of sheep fit for shearing was 42,293,205, an increase of 1,981,657 over 1908, made principally in the States of Montana, Wyoming, Idaho, and New Mexico. During the year there was a recovery in prices and volume of business from the panic in the fall of 1907. In January the wool sales in London opened in a promising manner. Early in the season there was a sharp demand for western wool. A conspicuous feature of the market was the increase in contracting for wool on the sheep's back. The Payne tariff bill which became a law on August 6, maintained the Dingley rates of 11 and 12 cents per pound on first and second class wool. On other wools there was a reclassification which favored the worsted rather than the carded woolen industry. In September many wool buyers sailed directly for Australia instead of London as formerly. At the close of the year there was an unusually small supply of wool in the Boston storage warehouses.

The total wool production in the United States both washed and unwashed was 328,110,749 pounds, a gain of 6,863,137 pounds over

1908. Of this amount 41,000,000 pounds was pulled wool. The total number of sheep killed in the four principal western slaughter centres was 5,824,000, or 26,200 more than for the five preceding years. A wool storage warehouse with a capacity of 25,000,000 pounds was erected at Chicago during the year, and represents a stage in the transfer of a portion of the wool trade from the east to the west. There has also been a union of the Montana and Chicago interests by the foundation of the National Wool Warehouse and Storage Co.

In Australia, the principal wool producing country of the world, the prices steadily improved during the year and wool auctions became more important. More merino wool is now sold in Australia than in the London market. During the year upwards of 18,000,000 sheep were slaughtered, a slight increase over 1908, and 756,590,163 pounds of wool were exported, of which amount 59,969,862 pounds were sent to the United States. Argentina sent about the same amount. The wool production in Uruguay amounted to 111,552,760 pounds in 1909, and 5,868,232, pounds were exported to the United States.

At the Arizona Station experiments were made in crossing Tunis sheep with natives, which have resulted in a heavier fleece than the native. Though rather coarse and of long staple it is a great improvement on the Tunis sire in quantity and quality. In Australia attempts were made to produce, by crossing, a dual purpose sheep that will furnish a good fleece and yet provide mutton for export to England. So far the best results have been obtained with a Shropshire-English Leicester-Merino.

The supply of poultry and eggs was greater than in previous years, but did not keep up with the usual increase in demand. The price of dressed poultry and eggs has not been so high for many years. The average price of eggs in the eastern markets for the month of December was about 5 cents per dozen higher than in 1908. The Department of Agriculture continued the co-operative work at the Maine Station in breeding for increased egg production and associated problems. A biometrical study of egg production based on trap nest records for 10 years at that station showed that egg production did not increase by selective breeding and that winter egg production has an adverse effect on the hatching quality of the eggs produced by the same birds on the subsequent hatchings. The Bureau of Animal Industry made a study of the conditions surrounding the production and marketing of eggs and published a report showing how the heavy loss incident to marketing may be overcome. A cold-storage evaporimeter, for measuring and regulating moisture in storage rooms, was devised by a member of the Bureau staff and was patented by the Department so that it may be used by the public free of royalty.

CANADA. The live-stock industry in Canada increased in amount and value per head, especially in dairy cattle, horses, sheep, and hogs. There is a good outlook for the cattle industry in Mexico, as good range land can be obtained for from \$3 to \$7 per acre. It takes a large amount of capital but the returns are quicker than from plantations. Along the coast region there is little loss from drought. For several years all kinds of farm animals have increased in the

island of Cuba, but the number of importations has decreased since 1904, which shows that the increase has come by breeding from native and introduced stock. Four breeds of cattle from India have been introduced into the island of Jamaica and all appear to be well adapted to the conditions. The Mysore breed is an excellent draft animal and is used in place of mules to transport bananas to shipping places. The Gir is a good dairy breed and the Hissar has proved useful as a general purpose animal. These favorable results, together with other recent experiences in sending cattle from India to Texas and to the Philippine Islands, indicate that the humped breeds of India are well adapted to all tropical and sub-tropical conditions and may lead to the development of the cattle industry in places where other breeds will not thrive owing to ticks and other cattle pests. In Argentina the number of all farm animals except sheep increased. The cattle industry is developing rapidly and the export meat trade to Great Britain has assumed considerable importance.

GREAT BRITAIN. The number of live-stock in Great Britain is as follows: Horses 1,552,993, cattle 7,020,982, sheep 27,618,410, hogs 2,380,887. These figures represent increases in all cases except in hogs. There are 2,000,000 more sheep in Great Britain than two years ago. The loss in hogs was due to the low price of pork and high price of feeds, but the price of pork was gradually rising. The increase in horses was wholly in classes used for agricultural purposes. In Ireland there was a decrease of 5336 horses, 94,046 cattle and 69,125 pigs from the number in 1908. Slight gains were made in sheep, asses, goats, and poultry. Live-stock production did not keep pace with consumption in France, as imports increased. Efforts were being made to stimulate production in the French colonies. A shipment of cattle was made from the Island of Madagascar to Marseilles. This colony, which contains nearly 4,000,000 head of humped cattle, can be made to supply large quantities for French consumption when the trade is adequately managed. Germany steadily advanced in all lines of animal industry.

Since 1880 the percentage of increase in horses has been 29 per cent., cattle, hogs 31 per cent., goats 51 per cent. This gain has been made by increasing the productiveness of the acreage instead of importing food-stuffs.

AUSTRALIA. A new era has been opened for the cattlemen of Australia since the recent successful shipment of chilled beef to England. Previous attempts had ended in failure. In this case the surface of the carcass was sterilized immediately after slaughter. The beef was 62 days in transit and sold at 8½ and 9 cents per pound for hindquarter, a little more than was paid for meat from Argentina. The government of Japan has recently taken steps to encourage the importation and improvement of live-stock. One reason for so doing is the belief among the officials that the scourge of "beri-beri" is due to rice diet. Meat has been made a part of the regular ration of Japanese soldiers. In 1909 there were in the country about 1,500,000 horses, 4000 sheep, 75,000 goats, 1,200,000 cattle of which 50,000 were milch cows, 17,000,000 fowls, 300,000 ducks, 9000 turkeys, and 7000 geese.

Many investigations were carried on in the

study of feeding-stuffs and animal nutrition. Hart, McCollum and their associates at the Wisconsin Experiment Station have shown that pigs possessed synthetic power to convert inorganic forms of phosphorus into organic forms when the needs of the animal demanded it. When starving for phosphorus this element was withdrawn from the skeleton. At the same station it was found that in cows pentosans of the corn plant disappeared from the digestive tract in greater amount than did the pentosans from wheat or oats. Many analyses of oats made by the United States Department of Agriculture show that the characteristic tendency of oats grown in the United States, when compared with oats grown in Europe, is toward a higher protein content. Several European investigations show that amids and other forms of non-protein nitrogen compounds may replace proteins to some extent in the nutrition of sheep and cattle.

The American Society of Animal Nutrition, which was organized in 1908, held its first regular meeting in Chicago, November 27. The meeting was well attended and the interest shown by the members present indicates that the society will prove to be a great stimulant for promoting investigations.

Among the principal books published during the year are: T. Shaw, *The Management and Feeding of Cattle*, N. Y.; C. W. Burkett, *Farm Stock*, N. Y.; E. Pott, Vol. III, of *Handbuch der tierischen Ernährung und der landwirtschaftlichen Füttermittel*, Berlin; T. W. Sturgis, *The Poultry Manual*, London; W. Bateson, *Mendel's Principles of Heredity*.

STODDARD, CHARLES WARREN. An American author, poet and educator, died April 24, 1909. He was born in Rochester, N. Y., in 1843, and in his early years removed to California. He attended the common schools and the University of California, but ill health prevented his graduation from the latter. He spent several years as an actor, and was afterwards a traveling correspondent. During this period he was for five years in the South Seas. From 1885 to 1887 he was professor of English literature at the University of Notre Dame, and from 1887 to his death held the same position in the Catholic University of America. Stoddard wrote many books, but the most important are those containing stories of the South Seas. Stevenson considered many of these stories masterpieces, and William Dean Howells called them the most remarkable stories of the South Seas ever written. The best known volume is *South Sea Idyls* (1873). Among Stoddard's other works are: *A Troubled Heart* (1885); *Lazy Letters from Low Latitudes* (1894); *In the Footprints of the Padres* (1902); *The Island of Tranquil Delights* (1904); *The Dream Lady* (1907).

STOKES, WHITLEY. An Irish scholar and scientist, died April 13, 1909. He was born in Dublin in 1830, was educated at Trinity College, and became a barrister in 1855. He spent a number of years in India, where he occupied various legal positions under the government, and drafted the present *Code of Civil Procedure*. He is best known, however, for his researches in and writings on Celtic languages, customs and monuments. Stokes is said to have done more than any other scholar to make accessible the literary and historical monuments of the

ancient Irish language. His writings on these subjects were voluminous. He was joint editor of the series of *Irische Texte*, the *Thesaurus Palachivernicus*, and the *Archiv für keltische Lexicographie*, and he wrote, among other works, *Irish Glosses* (1860); *Three Irish Glossaries* (1862); *The Calendar of Oengus* (1880); *Lives of Saints from the Book of Sismore* (1889); *The Eulogy of St. Columba* (1899).

STORAGE BATTERIES. The application of storage batteries to alternating current systems in connection with the variable ratio converter was the most noteworthy event in this field in 1908. This practice has been greatly extended in 1909 with much success. The most important of the new developments is known as the permanizing process. In the past the negative plates of the battery have been subject to a gradual loss of storage capacity with use, due to the clogging of the pores of the active material. Extra heavy construction was required to keep the rate of deterioration of the plates within reasonable limits. The permanizing process consists in soaking the plates in a solution of a carbonizable solid, such as sugar, until the pores of the active material are well saturated, whereupon the plates are removed and the sugar carbonized by heating. The pores are thus made proof against clogging and the negatives maintain a constant capacity over an indefinite life. The process has also been applied with success to old plates, resulting in a restoration of the original capacity. Much progress has also been made in grid plate construction. Better provision has been made for the mechanical strains caused by the expansion and contraction of the active material of the plates. The combined result of these improvements is found in the reduction in the weight and cost for a given output and a considerable increase in life. As the use of batteries in the past has been limited by their high cost, great weight and rapid rate of deterioration, the above improvements have greatly broadened the field of battery application.

Extensive use has been made of the storage battery for vehicle propulsion, more than 20,000 such equipments now being in use. Improvements in battery construction have made such vehicles more reliable and more easily maintained. The very short life of the early battery equipments has been overcome in the recent product. The storage battery bids fair to find more favor than the gasoline engine for heavy commercial truck propulsion. Records show that such trucks may be operated at about 85 per cent. of the expense for horse-drawn vehicles of equal capacity.

The Edison iron-nickel storage cell did not become a commercial factor of importance during 1909.

STRAITS SETTLEMENTS. A British Crown colony in the Malay Peninsula, deriving its name from the Straits of Malacca. The Colony is composed as follows:

	Area sq. miles	Pop. 1901	Capital Gov't. seat
Singapore	206	228,555	Singapore
Penang	107	128,830	Georgetown
Malacca	659	95,487	Malacca
Province Wellesley... .	288	115,264	Georgetown
The Dindings	260	4,113	Lumut
Labuan	31	8,286	Victoria
Christmas Island....	66	12,000	
The Cocos Islands... .	9	700	

The total population, including small adjacent islands, in 1901 was 572,249 (215,058 Malays, 281,933 Chinese, 57,150 natives of India); estimated 1908, 620,127. Capital, Singapore, with (1901) 228,500 inhabitants. Education (not generally compulsory) is provided by 213 government and grant-in-aid schools, with an average total attendance of 18,883. The principal products and exports are gambier, pepper, gutta-percha, rubber, horns, hides, sugar, rice, sago, tapioca, spices, dyestuffs, copra, rattans, coffee, tobacco, gums, tin, etc. The imports are rice, cotton piece goods, opium, petroleum, and coal. The ports are free, duties being levied only on opium, spirits, wines, and beer consumed in the Colony. Singapore is a port of call for vessels trading between Europe and India and the Far East, Northern Australia, and the Dutch East Indies, and is strongly defended.

The total trade for three years (including treasure) is given in Straits Settlements dollars (1 dollar=56.7758½ cents) as follows:

	1906	1907	1908
Imports.....	339,308,291	350,570,202	316,395,939
Exports.....	311,005,809	305,301,907	273,818,124

The aggregate trade of the separate Settlements is given for three years in Straits Settlements dollars (including inter-settlement trade) as follows:

	1906	1907	1908
Singapore.....	481,707,219	480,727,041	422,071,477
Penang.....	185,255,337	193,490,300	156,882,347
Malacca.....	10,018,119	9,539,992	8,853,068

The export of tin from Singapore in 1908 was valued at 33,477,542 dollars; from Penang, at 38,255,694. The number of merchant vessels entered and cleared at Singapore in 1908, exclusive of native craft, was 10,348, with a tonnage of 13,933,205; total for the Colony 18,495, tonnage 21,750,245. Total native craft entered at all ports, 17,747 of 723,536 tons. A railway connects Singapore with Kranji, whence ferries are run to Johore. The Perak State Railway runs from Parit Buntar in Krian to Kwala Prai in Province Wellesley, whence ferries connect with Penang; and a line extends from Malacca to Tampin in Negri Sembilan. These lines connect with the Federated Malay States Railway system. The revenue and expenditure of the Colony in 1908 are given at 8,969,015 and 9,837,624 dollars respectively, against 10,023,016 and 9,499,693 in 1907. The public debt stood, December 1, 1908, at 3,000,000 dollars. The Governor (1909, Sir John Anderson) is assisted by executive and legislative councils. Resident Councillor of Penang (1909), R. N. Bland; of Malacca, W. Evans.

THE OPIUM QUESTION. The report of a commission appointed to inquire into the use of opium in the Straits Settlements and Federated Malay States, published early in January, unanimously recommended the abolition of opium farms and the establishment of the Java system of government monopoly. The report declared against sudden prohibition as bad for the Colonies, and recommended the strict control but not the suppression of smoking dens. The Straits government was embarrassed by the

fact that one-half of the revenues came from opium rents. The opium farmers protested against anti-opium measures as injurious to trade and alleged a great increase in the morphine and cocaine habits. An opium farm property valued at \$460,000 was placed by the government in the hands of a receiver, but a compromise was subsequently reached and the receiver withdrawn. A later report of the opium commission (March 5) declared that moderate opium-smoking was relatively harmless and that evils were not such as to justify prohibition but only the strictest possible regulation. The Chinese Mutual Life Insurance Company had accepted as first class risks persons consuming as much as eight "chees" a day, which was greatly in excess of the average consumption in the Straits Settlements.

STREET CLEANING. An apparently increasing tendency to use street washing machines instead of relying upon hand or machine sweeping was noticeable during 1909. The New York Board of Estimate and Apportionment granted the Street Cleaning Department of that city \$100,000 for the trial of various kinds of street-washing machines in practical every-day use. About \$60,000 were expended. Soper's *Modern Methods of Street Cleaning*, published in 1909, is devoted chiefly to observations made by the author in London, Manchester, Paris, Berlin, Hamburg, Cologne, and Amsterdam, but it contains a chapter on street cleaning in New York City, besides general observations on street cleaning, gives data for use in awarding a five-year contract for cleaning streets in the boroughs of Manhattan, the Bronx, and Brooklyn, but definite action based on the tests was not taken in 1909. A total of fifty machines were tried. These were of six makes, but included only three broad types: (1) machines in which pressure for wash water discharged from nozzles is supplied by air compressed in a water tank on filling the latter from hydrants attached to the city water mains; (2) pressure obtained by means of a pump and gasoline engine mounted on the machine; (3) a water-sprinkling cart combined with a sweeper or squeegee consisting of a roller fitted with rubber strips. Each type of machine does its work by being drawn along the street to be cleaned. The results obtained have not been published in a form that permits of useful comparison. In general, the quantity of water required ranged from 100 to 1000 gallons per 1000 square yards of pavement cleaned, varying with the character and dirtiness of the pavement. The 13 squeegee machines seemed to have used considerably less water per unit area cleaned than did the thirty-five air-pressure machines, but their work was apparently less thorough. Further details of these tests may be found in the *Engineering Record* of January 8, 1910.

STOVAINE. See ANÆSTHESIA, CHEMISTRY.

STRIKES AND LOCKOUTS. The year 1909 was in marked contrast to the preceding year in the number and great size of trade disputes in the United States. The year was a time of readjustment of industrial relations between employers and employees preparatory to a new era of trade development. The resulting disruptions of business argue strongly for the necessity of a more extended use of methods of arbitration and conciliation in this country.

A number of the year's strikes were unique. That of the shirt-waist makers will be a landmark in the organization of America's women workers; that of the Ludlow, Mass., weavers throws into prominence some features of a model factory community; that of the Georgia Central Railway firemen involved the Southern race problem; those in the pressed-steel and tin mills preceded a long and tremendous contest between the United States Steel Corporation and the American Federation of Labor. In foreign countries conditions were various. France was troubled by miners' combats, while Germany and England were comparatively free from industrial war.

The strike of the shirt-waist makers in New York City on November 22 developed into the largest women's strike ever undertaken in this country. Within a few days about 40,000 young women, mostly Jewish and Italian from the East Side, were out. The strike was begun by the Ladies' Waist Makers' Union, a small body of not more than 1000 members. But so general were the bad conditions in the trade that the thousands of non-union workers struck voluntarily. Practically all of these at once joined the Union. The immediate cause of the strike was the discharge of girls for joining the Union, but the strikers demanded, besides the recognition of the Union, an increase in pay for both piece and time workers; uniformity in pay; a fifty-two hour week; pay for all legal holidays; not more than two hours overtime work on any one day; and notice one day in advance when there is no work to be done. The conditions in this industry have been peculiar. There are several hundred employers, mostly unorganized; conditions of work vary from fairly good to intolerably bad; bargains with workers, even in the same shop, are individual and therefore lacking in uniformity; the supply of available workers, even at starvation wages, has been plentiful. Moreover a system of sub-contracting or inside sweating prevailed in many shops; that is, the shirt-waist contractor sub-let portions of his orders to women who employed two or more girls to do the work. A number of employers soon made terms with the strikers, and by December 1 it was reported that 14,000 of the strikers had won their demands. The strikers won great sympathy in the city, the woman suffrage leaders and others among the well-to-do coming to their assistance personally. The strike was attended by much confusion, but there was little riotous action. The strikers' pickets, it was charged, were roughly treated both by strike-breakers and by police, and appeal was made to Mayor McClellan in their behalf. By December 15, 231 manufacturers had agreed with the Union and all but 7000 of the strikers were at work. The remaining employers, most of them members of the Associated Waist and Dress Manufacturers, held out stubbornly against the recognition of the Union, which had become the chief issue in the contest. They also objected to the demand that Union representatives should have free admission to the shops at all times and should have chief power to determine the rates of pay for new kinds of work. Though both parties were suffering greatly and efforts at settlement were continuous the strike still continued at the end of the year.

At Philadelphia a strike sympathetic with

and imitative of the above began on December 20, about 7000 shirt-waist makers being out. They demanded better pay, more sanitary conditions, shorter hours, and union recognition.

The strike of the Polish workers in the mills of the Ludlow Manufacturing Associates, beginning early in September and continuing until December 16, was unique in several features. The mills of the Associates are engaged in the manufacture of all kinds of twines, rope, burlap, cotton bagging, and jute and hemp yarns. Ludlow is a model village; the employers own 500 model cottages in and about the city; these are rented at very moderate rates to employees; the employers have also provided schools, churches, libraries, places of amusement and other avenues of welfare work. About one-half of the 3500 employees are Poles. The trouble began with the bobbin-boys in the bagging department. Sometime after October, 1907, the wages of these boys had been reduced from \$5.50 to \$5; the pay of the weavers was at the same time reduced from 29 cents per 100 yards to 24 cents. All expected an advance with the return of prosperity. On August 25, about 50 of the boys without warning did not come to work. This forced the weavers to remain idle. The managers offered the weavers the boys' pay extra if they would attend their own creels. This the weavers could not do without loss; they therefore refused and left the mills. A few days later the managers announced a reduction in weavers' pay from 24 cents to 20 cents. The strikers organized a union and sent representatives to the company with the proposal to return to work if the weavers were given 24 cents and the creel-boys \$5.50. The company not only refused but announced that all workers who had not returned to their places by November 8 would be evicted from company houses. The goods of such were later stored by the company free of charge. Meanwhile Lieutenant-Governor Frothingham had made a personal effort to settle the dispute, and the State Board of Arbitration and Conciliation had been appealed to by the strikers. Through the intervention of this Board the strike was ended on the following conditions: the company agreed to reemploy all former workers without discrimination; all evicted families to be allowed to return to their houses; the weavers to receive 20 cents per roll pending the arbitration of the wage dispute.

The contest between the Hat Manufacturers' Association and the United States Hatters of North America, which began with the discontinuance by the manufacturers and a consequent boycott (q. v.) and strike, continued most of the year. On January 14 the 59 members of the Manufacturers' Association closed their establishments, about 20,000 journeymen hatters being out. The strikers exhausted their funds in the payment of benefits and various appeals to the American Federation of Labor secured \$41,852; besides this other appeals for funds were made. At the end of eight months 30 manufacturers had made an agreement on the basis of conditions existing prior to the strike. Fourteen others soon followed, and by November agreements had been made in practically all cases. See BOYCOTT.

On July 1 about 7000 members of the Amalgamated Association of Iron, Steel and Tin Workers struck, stopping operations in 190

mills belonging to the American Sheet and Tin Plate Company in Ohio, Pennsylvania, Indiana, and West Virginia. The strike was a protest against an order of the company, which is a subsidiary of the United States Steel Corporation, reducing wages and declaring for the open shop. Both union and non-union men joined at first, though the point at issue was the exclusion of the union from the company's mills. The Amalgamated Association's foothold in the tin mills has long been the last vestige of union influence in the mills of the Steel Corporation. The cause of the strikers was taken up at a special conference of labor leaders, under the auspices of the American Federation of Labor, at Pittsburg on December 13-14. This resulted in a general declaration of war upon the United States Steel Corporation. It was decided to appeal to all unions in this country for financial aid for the striking tin workers; and to begin a systematic campaign of organization among all employees of the corporation wherever located. After a conference in New York, it was announced on December 17 by officials of the Steel Corporation that they would operate their plants on a non-union basis or dismantle them. It was stated that of the 190 mills idle July 1 as a result of the strike, about 90 had resumed on an open-shop basis, and that the corporation would soon begin the erection of a tin mill of 100-mill capacity at Gary, Indiana, to cost \$4,500,000.

One of the most unusual and dramatic strikes of the year was that of the workers in the mills of the Pressed Steel Car Company at McKees Rocks, Pa., and in other mills in that region. These men, 5000 in number, were mostly unskilled laborers, the majority (60 per cent.) were foreigners, mostly Slavs, many could not speak English, and they were led by no trade union. Only most extreme provocation could have led such workers to a determined resistance, for they ordinarily endure injustice and exploitation with stolid indifference. From the first the management assumed a very supercilious attitude toward the strikers, refusing to listen to demands and declaring that the latter had the "right to quit." The causes of the outbreak were partly the extremely low rate of pay, which, though barely a living wage in normal times, had been reduced during the preceding six months, and partly the track and pooling systems of work. A track ran the full length of the twelve sections of the erection department. The trucks of the future car were placed on one end of this track and moved forward from section to section, emerging a finished car. The men performing a given operation were formed into a pool, being paid in a body. Each man was rated, that is, given a minimum wage and the surplus for the pool was divided among its members. The piece-wage system was used; the rates were not posted and therefore unknown to the workers; and rates applied to the output of the pool. Under these methods each section in the department stimulated the preceding and following ones, for delay in any one meant loss to others. Any loss through errors or lack of materials fell not upon the company or its agents, nor upon individual negligent workmen but upon the whole pool. Moreover the wage-system enabled the officials to juggle with the earnings of the men with-

out any check. Grafting by foremen, book-keepers and others had been charged for years. It was claimed by the men that they often received less than their rated minimum wage. Many claimed they could not learn even what their rating was. Even had the rating and piece-wages been known the men could not have kept account of their earnings, for there were sometimes from 50 to 300 men in a single pool. The pay envelopes did not state the rating; the bonus, if any; the hours worked; nor the amount arbitrarily deducted for insurance. The workers found that there was no regularity in their pay; one of several years' experience might receive no more, or even less, than one of a few months' experience; men doing the same work for the same number of hours would receive different pay.

The strike lasted eight weeks. Immediately upon the outbreak of the strike, the company recruited several thousand strike-breakers, mainly in New York City. Their arrival was attended by increased rioting in which at least twelve rioters and police were killed, and by numerous attempts to destroy the works. The local police force was greatly strengthened and 150 troopers of the State constabulary were brought in. The company organized a commissary department, and provided rude sleeping accommodations and kept the strike-breakers within the works under strict guard. So rigorously were these workers dealt with that some who escaped brought charges of peonage against President Hoffstot of the Pressed Steel Car Company. The local judge refused to entertain these charges on the ground that the law under which they were brought was unconstitutional. In all some 400 of the strike-breakers quit and the widespread public indignation at the treatment they had received led to an investigation by the Department of Commerce and Labor. This revealed a startling condition of armed control over the workers. Thereupon the company, on September 6, reluctantly yielded to the demands of the strikers. It was agreed to return to the 1907 wage-scale (an advance of 10 to 15 per cent.); to modify the pooling system; to fix minimum wages; to abolish all financial relations of workers and foremen; to systematize the insurance payments and benefits; to abolish Sunday work; and to reemploy all strikers without prejudice. Trouble again broke out in the mills on September 15 and still again early in November, the company being charged with failure to keep its agreement. Matters did not come to complete rupture, but discontent and excitement continued until the close of the year.

The strike on the Georgia Central Railroad was a notable instance of the complication of a labor dispute with the race problem of the Southern States. During most of the last week in May no trains were run over that road as a result of a strike by white firemen occasioned by the employment of negro firemen. The strikers were sustained by a most vigorous public sentiment all along the route of the road, the inhabitants willingly suffering the want of many customary things. The road had regularly employed some negro firemen; it sought to place ten white firemen on the extra-list and give their places to negroes. This would have effected a saving of \$5 per day. The white firemen, numbering fewer than 100, feeling their standards of pay and living menaced, went on

strike. The intense feeling of patrons of the road made it unwise for the road to use negroes in place of the strikers. Through the intervention of Messrs. Knapp and Neill the latter were allowed to return to work under the old conditions, with the understanding that the matter would be submitted to arbitration. The arbitrators were Congressman Hardwick, chosen by the firemen, Col. Hilary A. Herbert, chosen by the road, and Chancellor Barrow of the University of Georgia. Late in June they decreed that negro firemen should have the same pay and the same chances of promotion as white firemen.

The men employed on the cars of the Philadelphia street railways went out on strike in June, on account of dissatisfaction with wages and arrangement of hours. They wished also to buy uniforms where they pleased, and to present their grievances through a representative committee. The company had just announced an advance in pay of one cent per hour to take effect July 1st. They therefore at first refused to negotiate with the men. The sympathy of the Philadelphia public for the employees was greatly strengthened by the moderation of the strikers and their declared willingness to return to work as soon as the company agreed to negotiate with their representatives. With the increasing confusion and disturbance, Mayor Reyburn endeavored to persuade the strikers to return to work on the ground that they were quasi-public servants. It was pointed out that the same reasoning could be used to induce the company to grant the strikers' demands. Soon after this intervention the strike was extended by the inclusion of the elevated lines. The mayor then offered his services as intermediary, and, as the result of considerable political pressure, the company yielded. On the day preceding the primary election the company announced that it was ready to take up with employees' representatives the questions of hours and conditions of work, that it conceded the right to buy uniforms from any one of five clothiers, consented to take back all former employees, and would not rescind the announced advances in wages.

On November 30 began a strike of 2300 railroad switchmen on thirteen different roads between St. Paul and the Pacific coast. This strike followed two weeks of negotiations between representatives of the Switchmen's Union of North America and of the railroads. The men demanded an advance of 6 cents per hour for a ten-hour day, double pay for Sundays, holidays and overtime, and the modification of the physical examination and the age limit placed upon switchmen entering the service. The managers' committee offered an increase of 20 cents per day of ten hours to all switchmen in a limited part of affected territory. Following the failure of the negotiations Martin A. Knapp of the Inter-State Commerce Commission and Charles P. Neill, Commissioner of Labor, requested the disputants to avail themselves of the Erdman act. The railroad managers at once consented, but the union committee declared that it would not submit to arbitration under any circumstances.

The strike had the effect of bringing freight transportation in the Northwest to an immediate standstill, entailing enormous losses to many lines of business, and throwing thousands

of men in various occupations out of work, reduced the output of coal by about one million tons. The passenger traffic was not seriously crippled. By December 3 the railroads claimed to have imported 1500 men to take the place of the strikers. Moreover, more than 150 strikers, who belonged to the Brotherhood of Railway Trainmen, returned to work on orders from the Brotherhood officers. The railroads were able gradually to increase the amount and regularity of freight traffic, though fully normal conditions did not prevail at the end of the year. At that time efforts were being made in Washington, D. C., to adjust the differences through a conciliation board. The chief obstacle to a settlement was the absolute demand of the strikers that all be given their former positions. On December 31 it was announced that if the arbitration plan failed a much more extensive strike of railway employees was probable.

Other strikes of the year include that of the street railway employees at Omaha in September; that of 5000 granite cutters about Barre, Vermont, on November 17, on account of the proposed introduction of a pneumatic brush hammer; this continued, without violence, to the end of the year; that of the laborers engaged in traffic on the Great Lakes, beginning April 30; that of the bakers on New York City's East Side on the same date; that of Chicago drivers, to the number of 1000, inaugurated May 8; and that of the boilermakers at Montreal, Dunkirk and Schenectady, N. Y., Richmond, Va., and Pittsburg, Pa., during December, on account of the standard time system, closed on December 28 by mutual concessions.

CANADA. The only noteworthy strikes were those of the coal-miners. In April about 3000 men employed in the southern Alberta field struck for better terms; the trouble was settled by an arbitration board late in May, the miners returning to work on the old basis under a three-year agreement. On July 6 the employees of the Dominion Coal Company at Sydney, Glace Bay, Cape Breton Island, struck under the leadership of officers of the United Mine Workers of America. Other collieries in that region were able to continue because their miners belonged to the Provincial Workman's Association, a rival union controlled by Canadians. Previously to the strike the members of the United Mine Workers had appealed to a conciliation board on the ground that the company was discriminating against them in favor of members of the strictly Canadian union. The board reported that no such discrimination was found. The miners then struck for higher wages, without asking for an arbitration board. There was much rioting and troops were dispatched to preserve order. There was intense feeling in many quarters against the domination of Canadian workers by American trade union officials. This became the most important feature of the strike, and most of the Canadian unions lined up in support of internationalism or against it. The strike collapsed in August, for, although disorder continued for some time, the introduction of more and more strike-breakers gradually increased the output of the mines. The strike of about 1500 miners at Springhill at the suggestion of officials of the United Mine Workers caused additional protests against American domination. This strike was broken late in December by labor brought in from Montreal. These strikes in Nova Scotia

FRANCE. France was the scene of many and unusual labor disturbances during the year, a number of the most important being socialistic and even revolutionary in origin and purpose. The notable strikes of the year were those of governmental employees. About the middle of March the postal, telegraph and telephone employees struck on account of dissatisfaction with the system of promotion. Premier Clemenceau declared that the strikers had struck without cause, and the government at once suspended 38 ringleaders and sentenced 8 others to six days' imprisonment. This demoralized the strikers, who returned to work on the 23d with the understanding that none of them should be punished. The strikers demanded that M. Simyan, Under-Secretary of State for Posts and Telegraphs, be dismissed, but the government refused its assent. M. Simyan was made a special mark by the strikers, because he had issued orders not only forbidding trade-union agitation within public offices, but also prohibiting public employees forming trade unions.

On May 11 these same employees struck again. Some 600 of the strikers, much to their astonishment, were summarily dismissed from the public service. The strikers, under the lead of M. Pataud, held excited public meetings at which the government was roundly denounced and the *Internationale*, the song of revolt, was sung. At the same time Premier Clemenceau ordered troops into the city, organized lines of automobiles and carrier pigeons, and placed soldiers at the work of assorting mail. M. Pataud sought to strengthen his weakening ranks by inducing the electricians to strike and thus plunge the city into the horror of darkness. They refused. He did, however, succeed in inducing the secretary of the *Confédération Générale du Travail* to order a general strike. The general strike was a complete fiasco. The government thus won a conflict full of momentous possibilities. For further details of both these strikes, see FRANCE, paragraphs on *History*.

There were numerous strikes among the sailors, naval reservists and dock-laborers, including the cities of Bordeaux, Marseilles, Nantes, Dunkirk and Lorient. These crippled the coast trade and interfered with international shipping. The strike of the button-makers in the region of the Oise continued for six weeks, was attended by rioting and incendiarism, and was settled in favor of the employees, who demanded uniformity in wages throughout the region. That of the operatives in the woolen-mills in the south of France at Mazamet continued for four months with much violence; it was concluded in May, the workers securing higher pay.

SWEDEN. The most successful attempt at a general strike yet made was that in Sweden led by the Swedish General Federation of Labor. The strike followed a series of troubles in the paper pulp, the iron and steel, the tailoring, the railway shops, and a few minor industries. In several cases the workmen had broken contracts or refused the awards of arbitrators and the General Association of Employers had declared a general lock-out in the above trades. This declaration led to the order for a general strike on August 4, an order obeyed by about 285,000 men, 30,000 of whom were in Stockholm. Among the strikers were the provision

and public-house laborers, gas and electric light, railroad, postal, telegraph and street railway men, printers, sextons, and a few agricultural workers. For an account of other features of the strike, see SWEDEN. Its failure was doubtless due in part to its incompleteness, many unions not responding; in part to lack of public support; and in part to the fact that when few members are earning a strike fund proves an inadequate support.

NEW SOUTH WALES. A strike of 12,300 coal-miners in the Maitland-Newcastle district began on November 7. Thousands in other industries were soon rendered idle; and before the close of the strike in December business generally was demoralized, owing to the small supplies of reserve coal on hand and the difficulty of importations from Japan on account of sympathetic strikes of dock-laborers. Coastwise and international shipping were crippled. This strike was remarkably effective because of the scientific spirit in which it was conducted; all matters were handled by a strikers' congress and the open support of many other unions was secured. On December 17 the government passed a law rendering both strike-leaders and employers who instigate or aid a strike or lock-out liable to immediate arrest and imprisonment for one year, without alternative of fine. On the same day agreement was reached and work was resumed on the 20th.

NATAL. About the middle of April several thousand government railway employees went on strike, refusing an offer of the government to inquire into all grievances. The strikers had great political power, owing to their number and the solidarity of their vote, and there was fear that the strike might embarrass the formation of the South African Union. The government nevertheless dealt severely with the leaders and threatened to discharge all employees remaining out after a certain date. Outside workmen were brought in and the strikers gradually returned to work, matters being again almost normal by the middle of May.

STRONG, EDWARD TRASK. An American rear-admiral (retired), died March 18, 1909. He was born at North Andover, Mass., in 1840. After studying at Andover he entered the navy as a volunteer officer in 1862. He served throughout the Civil War, and in 1868 was commissioned ensign in the navy. By promotion he rose to the rank of commander. He served at sea on the North Atlantic, Pacific, European and Asiatic stations. During the Spanish-American War he was equipment officer at the Portsmouth Navy Yard, and had charge of Admiral Cervera (q. v.) when the latter was detained there as a prisoner. In 1900 he retired from active service with the rank of rear-admiral.

STURGIS, RUSSELL. An American architect and author, died February 11, 1909. He was born in Baltimore county, Md., in 1836, and graduated from the College of the City of New York in 1856. He studied architecture in Europe, and practiced actively until 1880, when he was obliged to travel on account of his health. From 1885 he was active in the management of art societies in New York City, and in lecturing on subjects relating to art. He was editor in decorative art subjects for the *Century Dictionary*, and of fine art in general for

Webster's International Dictionary. He contributed articles on art to the *New International Encyclopædia*. He edited also a *Dictionary of Architecture and Building* (3 vols., 1901-2). In addition to these editorial labors, Mr. Sturgis was a prolific writer on art subjects. Among his works are *European Architecture, A Historical Study* (1896); *How to Judge Architecture* (1903); *The Appreciation of Sculpture* (1904); *The Appreciation of Pictures* (1905); *History of Architecture* (vol. I., 1908) and many monographs in periodicals. Mr. Sturgis contributed articles on art subjects for many years to *Scribner's Magazine*.

SUBWAYS. See TUNNELS.

SUDAN, ANGLO-EGYPTIAN. A territory extending from the southern boundary of Egypt (the 22d parallel) to Albert Nyanza and the northern frontier of Uganda. Estimated area of the 13 constituent provinces, 950,000 square miles. Population, about 2,000,000. The chief towns are Khartum, the capital (population 18,235), Omdurman (population about 42,780), Halfa, Berber, Suakin, Port Sudan, El Obeid, Kassala, and Dongola. The government has undertaken to promote primary, secondary, and industrial education, and Gordon Memorial College, opened at Khartum in 1902, has over 500 students. Much of the country is fertile and well adapted to the raising of cotton and food grains, but it has not yet recovered from the desolating tyranny of the Mahdi and Khalifa (1882-1898). Over 1,400,000 acres are under cultivation. The vast forests are rich in valuable woods, barks, and gums. Imports and exports in 1907 were valued at £E1,214,859 and £E357,729, respectively (the Egyptian pound is worth \$4.8943). The imports include clothing, machinery, railway material, and coal; the exports, gum, ivory, and ostrich feathers. Besides the military (Sudan) railway from Cairo to Khartum (1047 miles), there is a line from Port Sudan and Suakin to the affluence of the Nile and the Atbara (311 miles), and a branch of the Sudan Railway from Abu Hamed to Kareima. Other lines and extensions are projected. There are over 4400 miles of telegraph line, connecting the principal towns with one another and with Cairo. For 1908 the estimated revenue and expenditure were £E1,000,201 and £E1,253,207, the balance of £E253,006 to be made up by Egypt. At the head of the Sudan administration is a governor-general, who is appointed by the Egyptian government with the assent of the British government. Each of the 13 provinces is under a governor, who is a British officer in the Egyptian army. The Governor-General in 1909 was Lieutenant-General Sir Reginald Wingate, Sirdar of the Egyptian army.

SUEZ CANAL. See CANALS.

SUGAR. The sugar crop of the world in 1909, according to estimates made by Willett and Gray, amounts to 14,446,000 tons. This is a decrease of over 100,000 tons, compared with 1908. The estimates by countries is as follows: United States (cane sugar, Louisiana and Texas), 343,000 tons; Porto Rico, 280,000; Hawaii, 490,000; Cuba, 1,700,000; Mexico, 130,000; Demerara, 115,000; Peru, 150,000; Argentina, 120,000; and Brazil, 276,000, which with the West Indies and Central America, brings the total for America up to 3,941,000 tons; British India, 1,800,000; Java, 1,200,000;

Formosa, 130,000; Philippine Islands, 145,000; Australia and Fiji Islands, 224,000; Africa, 365,000 (including 220,000 tons in Mauritius); Spain, 16,000, making the total cane sugar production of the world 7,821,000 tons.

The beet sugar crop of Europe is estimated at 6,190,000 tons, and in the United States at 435,000 tons. The consumption of sugar is said to be increasing more rapidly than the production.

The latest complete returns for the beet sugar industry in the United States are for 1908. In that year unfavorable weather conditions reduced the acreage of beets harvested, so that although the yield and quality were generally good, there was a decreased production of sugar. There were 421,306 acres planted in beets in the United States, Colorado leading, with Michigan second, and California third. In 1908, there were 62 factories in operation, which together worked 3,414,891 tons of beets and produced 425,884 tons of sugar, 8 per cent. less than in 1907, and 12 per cent. less than in 1906. The use of beet pulp for feeding is increasing; 11 factories have installed apparatus for drying the pulp, and most of the others sell or feed it in the wet condition.

In Canada the beet sugar industry has been decidedly more satisfactory to the farmers than to manufacturers. Only two of the five factories built are now in operation. The cold climate, with attendant difficulty in storing the beets, has made a short campaign, and a long period of idleness for the factory. Last year about 26,000,000 pounds of beet sugar were produced.

An effort is being made to promote a syndicate in England to manufacture sugar from beets, especially in Lincolnshire. Half of the required area of sugar beets has been pledged for a period of five years. England imports nearly \$100,000,000 worth of sugar annually and produces none.

The government of Victoria, Australia, is making an effort to revive the beet sugar industry, which failed when attempted ten or twelve years ago. A large factory, built under government patronage, is to be used as an experimental factory to aid and encourage beet growing, and sugar beet experiment stations are to be started in various localities, with government officers in charge.

The Japanese government has endeavored to encourage the production of sugar in Formosa, to be refined in Japan. A law recently passed provides for the remission of duties on raw sugar imported into Japan and refined and exported within a year. Thirty new sugar factories are under way in Formosa, with a total crushing capacity of 4450 tons of cane daily, and with a capital of about \$3,000,000. See PHILIPPINES and PORTO RICO.

Fraud in the weighing of sugar at the Port of New York, which resulted in evading customs duties, was exposed during the year, and led to a civil suit against the American Sugar Refining Company, as a result of which the company paid a penalty of \$135,486.32, and made restitution of \$2,000,000 in unpaid duty. Suits against officials of the company are pending. See TRUSTS.

Sugar manufacture and sugar chemistry received much attention at the seventh International Congress of Applied Chemistry, held in London the past summer. In connection with this congress the sixth meeting was held of the International Commission for Uniform Methods of Sugar Analysis.

A sugar experiment station was started the past year at Tucuman, Argentina, with R. E. Blouin, formerly of the Louisiana Sugar Experiment Station, as director.

SULEIMAN Effendi. Brother of Sultan Mohammed V. and of Abdul Hamid, former Sultan of Turkey, died July 14, 1908. He was born in Constantinople, in 1860, the sixth son of Sultan Abdul Aziz. All his brothers, except Abdul Hamid and Reshad (Mohammed V.), predeceased him, but his cousin, Yusuf-Izz-ed-Din, son of Abdul Aziz, born in 1857, came between him and the reigning Sultan. He lived in retirement, but was allowed somewhat greater liberty by Abdul Hamid, than was given his other brothers. His tastes were agricultural and he was nicknamed "Farmer Suleiman" by the Turks.

SULPHATE OF AMMONIA. See FERTILIZERS.

SUMATRA. A large island of the Malay Archipelago, forming an outpost of the Dutch East Indies. In parts of the interior Dutch control is merely nominal. See DUTCH EAST INDIES.

SUN. See ASTRONOMY.

SURINAM. See DUTCH GUIANA.

SUSQUEHANNA RIVER BRIDGE. See BRIDGES.

SWARTHMORE COLLEGE. An institution of higher learning at Swarthmore, Pa., founded in 1869. The students and faculty in the autumn of 1909 numbered 380. There were 35,200 books in the library. During the year \$75,000 was received in gifts. Among the changes in the faculty were the appointments of Dr. Harold C. Goddard, professor of English, and Dr. Edwin Fauver, assistant professor of biology and director of physical training. The productive funds of the college amount to about \$7,085,000. The total income is about \$200,000. The president is Joseph Swain, LL. D.

SWAZILAND. A British South African protectorate. Area, 6536 square miles. Population (1904), 85,491 (84,529 Swazi—a section of the Zulu race—and 890 whites); estimated 1907, 90,890. The natives grow corn, millet, ground nuts, beans, sweet potatoes, etc., and the country is said to be rich in minerals. Tin is mined. Swaziland is a member of the South African Customs Union. Revenue and expenditure (1908), £39,529 and £57,568. The costs of the Swaziland Concessions Commission and of the expropriation of monopolies account for the excess of expenditure over revenue. The Resident Commissioner (1909, R. T. Coryndon), has headquarters at Mbabane. Native affairs are subordinately administered by native chiefs. The native ruler is Sobhuza, a ten-year-old child, under the regency of his grandmother, Nabotsibeni. By the South Africa Constitution act, 1909, it is provided that no land of the native reserves in Swaziland shall be alienated from the native tribes.

SWEDEN. A constitutional monarchy of northern Europe. Capital, Stockholm.

AREA AND POPULATION. The total area is 172,877 square miles. The population, according to the census of 1900, was 5,136,441, and was estimated in 1907 at 5,377,713 (2,626,456 males, 2,751,257 females). In 1907 the total living births were 136,600; deaths, 78,100; marriages,

33,200; emigrants, 22,078, of whom 19,325 went to the United States. The increase of population in 1908 was greater than in any previous year of the past ten, being 51,887, or 0.65 per thousand. The increase was confined to the large cities, the small industrial centres not having recovered from the crisis of 1907-8. Stockholm had, at the end of 1907, 337,460 inhabitants; Göteborg, 180,523; Malmö, 79,817; Norrköping, 45,203; Helsingborg, 32,238; Gävle, 31,367.

EDUCATION. Primary education is free and compulsory. In 1906 there were 13,069 public elementary schools, with 768,148 pupils. There were (1907) 77 public high schools, with 21,602 pupils; 35 people's high schools, 1827 pupils; 14 normal schools, 1458 pupils; 19 technological schools, 4344 pupils; and two universities, at Upsala (1884 students) and Lund (922 students). There are private universities at Stockholm and Göteborg, and a state faculty of medicine at Stockholm, with an average attendance of 256. The state supplied in 1906 one-fourth of the amount (30,615,183 kroner) expended on primary education. Among the recruits (Beväring, 1904) only 0.59 per cent. were unlettered, and only 1.11 per cent. were unable to write. The Lutheran is the state religion; entire religious toleration prevails.

AGRICULTURE, ETC. Of the total land area 8.9 per cent. is under cultivation, 3.3 per cent. natural meadow, and 51.9 per cent. under forests, the products of which constitute a valuable export. The public forests are mostly owned by the Crown and cover an area of 7,125,845 hectares. The yield in 1906 amounted to 2,649,910 cubic metres of timber. See FORESTRY.

In 1906 the farms under cultivation numbered 355,361, of which 89,000 were of 2 hectares (1 hectare=2.471 acres) and under; 224,599 of from 2 to 20; 33,548 of from 20 to 100; and 3239 of more than 100. The 1908 harvest is reported to have been the best in years. The estimate by the Swedish Ministry of Agriculture of the production of principal crops for 1908 in comparison with that for the preceding year, and the area in hectares (1906), are given as follows:

	Area (hectares)	1907 Bushels	1908 Bushels
Potatoes	152,200	52,270,150	78,019,724
Oats	812,600	67,741,291	72,773,100
Rye	410,900	21,596,600	26,051,505
Barley	203,500	13,552,855	15,519,949
Mixed grain	149,100	12,774,474	14,649,910
Wheat	85,800	5,953,495	6,755,712

The production of sugar beets in 1908-9 amounted to 900,934 tons, yielding 138,061 tons of sugar. The production in 1909-10 was estimated at 864,400 tons; and the sugar yield, at 121,770 tons. At the end of 1906 the number of horses in Sweden was 563,554; cattle, 2,600,151; sheep, 1,051,119; swine, 872,363.

MINING AND METALS. Mining, already one of Sweden's most important industries, is making constant progress, through the introduction of new machinery. In 1907 there were 31,700 persons engaged in mining establishments. The output in 1907 was as follows: Iron ore, 4,480,070 tons; coal, 305,338; zinc ore, 50,884; sulphur pyrites, 27,133; copper ore, 21,957;

manganese ore, 4334; silver and lead ore, 1987. The pig-iron output was 615,778 tons; the bar iron, 417,535. The gold produced amounted to 28,075 kilos; silver, 928.8; lead, 812,625; copper, 1,577,452; and zinc, 289,000.

MANUFACTURES. The timber and wood-working industries are of great importance. There were in 1906, 1377 saw and planing mills, employing 40,347 persons and having an output valued at 162,354,970 kronor (1 krona=26.8 cents); 502 joinery and furniture factories, with 11,906 employees, and output 26,346,502 kronor; 138 wood-pulp factories, with 9257 employees, and output 57,298,038 kronor; and 68 paper and pasteboard mills, with 7949 employees and output 42,330,885 kronor.

COMMERCE. The imports and exports for three successive years are given below in kronor:

	1905	1906	1907
Imports....	582,084,357	644,227,836	682,104,613
Exports....	450,211,733	504,284,813	524,662,547

Germany furnished imports to the value of 240,777,000 kronor, and received exports valued at 108,719,000; Great Britain, 178,528,000 and 182,115,000; United States, 61,343,000 and 13,779,000; Denmark, 50,540,000 and 57,705,000; Russia and Finland, 30,619,000 and 23,813,000; Norway, 23,521,000 and 25,452,000; France, 23,099,000 and 39,522,000.

COMMUNICATIONS. The total length of railways at the end of 1907 was 8218 miles, 2693 miles of which belonged to the state. Receipts (1905) amounted to 109,553,318 kronor; expenditures to 72,358,900. The cost of construction for the state railways to the end of 1905 was 446,066,590 kronor; passengers carried (1905) numbered 13,353,844; goods carried amounted to 10,434,340 tons. Cost of private railways to the same date was 479,788,772 kronor; number of passengers (1905), 28,340,930; weight of goods, 18,623,820 tons. In 1906, 116,166 ships passed through the canals. The total length of telegraph and telephone lines (exclusive of private lines) at the end of 1907 was 21,646 miles, of which 16,304 belonged to the state; total length of wires, 164,109 miles, of which the state owned 149,332. The remainder was railway property. There were 262 telegraph offices, which transmitted 3,780,319 messages. There were (1907) 3648 post-offices; total post-office receipts, 19,651,075 kronor; total expenditures 17,842,211 kronor. The total number of ships engaged in foreign and domestic trade was (1907), 2972, of 742,361 tons; of which 1090, of 488,362 tons, were steamers. In 1907, 36,088 vessels of 9,873,00 tons entered, and 35,964 of 9,792,00 cleared at the ports.

FINANCE. The krona is the unit of value, and is worth 26.8 cents. The budget for 1908 balanced at 202,375,000 kronor; for 1909, at 228,139,000.

The public debt stood, January 1, 1909, at 515,375,745 kronor (external, 462,824,385; internal, 52,551,360).

The Riksbank belongs to the State and is the only bank of issue. It is capitalized at 50,000,000 kronor, has a reserve fund of 9,455,000, and has deposits amounting to 61,139,167. Its books balanced, January 1, 1908, at 382,981,674 kronor. There were (1908) 19 conjointly responsible private banks, with a collective capital of 131,300,000 kronor, 83,868,000 reserve,

and deposits amounting to 607,277,892; and 64 joint-stock banks with total capital, 198,612,830 kronor, reserve 98,255,123, and deposits to the sum of 706,434,783. The post-office savings bank (January 1, 1908) had 566,076 depositors and 50,680,935 kronor of deposits; other savings banks, 1,476,119 depositors, deposits amounting to 688,614,199 kronor, and capital and reserve funds to the sum of 57,858,603. The private savings banks are reported to have had, June 1, 1909, about 700,000 depositors, and about 260,000,000 kronor deposits.

NAVY. The effective navy in 1909 included the following: 12 armored coast-defense vessels of 42,560 tons; 1 armored cruiser of 4060 tons; 7 armored gunboats of 3220 tons; 4 gunboats of 1860 tons; 6 torpedo boat destroyers; 27 first-class torpedo boats; 3 submarines. In addition there were school ships, dispatch boats, and various obsolete craft. Several torpedo boats and destroyers and one submarine were building.

ARMY. The army is divided into six divisions and the troops of Gotland and Boden. It embraces 28 regiments (81 battalions) of infantry; 8 regiments (50 squadrons) of cavalry, 6 regiments and 1 corps of field artillery (60 batteries, of which 3 are horse artillery, 12 howitzer batteries, with rapid fire guns); 1 regiment (7 batteries) of heavy artillery, 1 regiment (10 companies) of fortress artillery, 4 battalions (16 companies) of engineers, and 6 battalions (18 companies) of train. The war organization of a division would represent 2 brigades of infantry of 6 battalions, 1 regiment of four squadrons of cavalry, 1 regiment of field artillery, with 11 batteries of which two are howitzers, 1 company of engineers, pontoon equipment, telegraph section, and 1 battalion of train. The active army in 1909 consisted of 2573 officers, 464 employees, 2407 non-commissioned officers, 24,104 volunteers, and an annual contingent of recruits, making a grand total of 60,492 men and 8734 horses. In addition there were on leave and in the reserves, 302,850, making a war effective of 363,342, to which might be added the Landstorm of about 170,000.

GOVERNMENT. The executive authority is vested in the King acting through a responsible Council of State, and the legislative power in a Diet composed of two Chambers. The First Chamber has 150 members, elected by the provincial councils and the municipal corporations; the Second Chamber, 230 members, elected by universal suffrage. The King in 1909 was Gustaf V. (born June 16, 1858), who married, September 20, 1881, Princess Victoria of Baden, and succeeded to the throne December 8, 1907. The heir-apparent is Gustaf Adolf, born November 11, 1882. The Council of State of June 11, 1909, was composed as follows: Minister of State, S. A. A. Lindman; Foreign Affairs, Count A. F. Taube; Justice, G. A. Petersson; Finance, C. J. G. Swartz; Interior, Count H. E. G. Hamilton; Marine, Count C. A. Ehrensvärd; War, Major-General O. B. Malm; Instruction, Dr. P. E. Lindström; Agriculture, S. O. Nylander; without portfolio, C. F. W. von Hedderstierna and K. H. von Sydow.

HISTORY

POLITICAL AFFAIRS AND FOREIGN RELATIONS. The new Riksdag met on January 16. The government announced that to meet the needs of the

budget, a stamp duty and a slight increase of the income tax would be proposed. One of the important measures of the session was the electoral reform law providing for universal manhood suffrage and proportional representation, which was carried in both Chambers by large majorities. In July a train ferry service between Sassnitsch in Germany, and Trelleburg in Sweden, was formally opened in the presence of the King of Sweden and the German Kaiser. The Hague Court of Arbitration decided the frontier dispute between Sweden and Norway on October 23, awarding the Grisbadarne islands, valuable for the fisheries, to Sweden, and Skjøette Grund to Norway. See also the article ARBITRATION, INTERNATIONAL.

THE GREAT STRIKE. One of the most formidable strikes in the recent history of labor disputes occurred in Sweden in August. It arose from a disagreement between the General Association of Employers and the General Federation of Labor as to the scale of wages in various classes of labor. A series of comparatively unimportant labor disputes had occurred in several trades, including the paper and the iron and steel industries. In some instances the strikes were provoked by lockouts, the employers charging the workmen with breaking their contracts, and not complying with the decisions of their central organizations. In others, strike followed the employers' refusal of certain demands. Efforts at official mediation having failed, the employers declared a lockout which involved about 80,000. The Labor Federation thereupon declared a strike in the industries affected and later, on August 4, a general strike. The number at first involved was 124,000, but the efforts to bring on a general strike were so far successful that the number rose to 285,000. This did not, however, come up to the expectations of the strikers, who hoped to bring out all the unions. The railway employees did not go on strike, nor did the agricultural laborers. The total number of workmen in Sweden, exclusive of agricultural laborers, has been estimated at 460,000. The agricultural laborers are said to number 800,000. Street traffic in Stockholm at the beginning of the strike was virtually at a standstill; shops and public houses were closed; the foreign visitors left the city, and there was danger for a time of a shortage of food. The King intervened on August 7 with the representatives of both parties, but neither appeared to desire mediation. The printers went on strike, and on August 9 the newspapers announced that they would cease to appear. On the following day the Labor paper was the only one published. Afterwards the others were resumed, but on a reduced scale. Early in the strike, the government, with the approval of the strikers themselves, prohibited the sale of spirits. This measure proved so effective in reducing drunkenness and maintaining public order, that it strengthened the arguments of the temperance reformers, who demanded that the prohibition should not be repealed even after the strike ended. The government appointed a committee in August to consider the question in its financial bearings, that is whether it would be possible to withdraw from the local administrating this source of revenue. The effect of the strike was greatly mitigated through the efforts of the Public Security Brigade, an organization of volunteers of all classes who supplied labor for such services as were especially

necessary to the public safety and welfare. The places of many strikers were taken by voluntary workers. The community did not support the demands of the laborers. The appeals to solidarity among the workmen were not effective. Within the first few weeks the number of workmen who went back to work independently was estimated at 50,000. The Federation of Labor ordered all employees not involved in the original strike to go back to work on September 11, and by the middle of that month the secondary strike was at an end. At the end of September the government appointed a conciliation committee to try and adjust differences between the Federation of Labor and the Employers' Association in the original dispute, but it failed. At that time 60,000 were still reported idle. Further efforts of the government, in November, were unsuccessful. The employers, however, agreed to end the lockout in the iron industry. See **STRIKES**, and **ARBITRATION, INTERNATIONAL**.

SWIMMING. C. M. Daniels of the New York Athletic Club again demonstrated in 1909 that he has no equal in amateur swimming circles. Record after record fell before his prowess during the year, the most important ones recognized by the Record Committee of the Amateur Athletic Union being: 220 yards, indoor, 8 turns, 2 minutes 25 $\frac{1}{2}$ seconds; 880 yards, outdoor, 7 turns, 12 minutes 18 $\frac{1}{2}$ seconds; 1-mile, outdoor, 15 turns, 26 minutes 19 $\frac{1}{2}$ seconds. The Amateur Athletic Union competitions in 1909 were held at various times in New York, Chicago, Pittsburgh, St. Louis, Montclair, Philadelphia and Brookline, Mass. The important events in these meets and the winners of each were: (indoor) 50, 100, 220 and 500 yards, C. M. Daniels; (outdoor) 440 and 880 yards, C. M. Daniels; 10 miles, J. H. Handy of the Illinois A. C.; 400 yards relay (4 men, 100 yards each), C. M. Daniels, G. Smith, L. B. Goodwin and J. H. Riley of the New York A. C.; (indoor) 200 yards, breast stroke, M. Goessling of the Missouri A. C.; (indoor) fancy diving, F. Bornemann of the Chicago A. A.; (outdoor) high diving, G. W. Gaidzik of the Chicago A. A.; water polo, Chicago A. A.; and plunging, A. McCormack of the Brookline S. C.

The Canadian amateur championships were held at Montreal, R. M. Zimmerman of the Montreal S. C. winning the 40- and 100-yard races and the fancy diving event; L. Earl of the Montreal A. A. A. the 220-yard race, and E. L. Wilson of the Montreal A. A. A. the high-board diving. In the outdoor championships held at Ottawa G. Johnston of Ottawa won the 50- and 100-yard races and Zimmerman the high and variety diving events. The English amateur swimming championships were won by P. Radmilovic in the 100 yards and by T. S. Battersby in the 220, 440, 500 and 880 yards and the mile.

The Intercollegiate championship meet held at New York on March 25 was won by the University of Pennsylvania with a total of 27 points. Princeton finished second with 11 points, and Yale third with 7 points. Harvard, Columbia and the College of the City of New York failed to score a point. In water polo Yale and Princeton were tied for the highest honors with 4 games won and 1 lost each. In the play-off Yale won by a score of 1 to 0. No new records were made in the intercollegiate meet.

SWINBURNE, ALGERNON CHARLES. An English poet, died April 10, 1909. He was born in London, April 5, 1837, the son of Admiral Charles Henry Swinburne and the daughter of the third Earl of Ashburnham. His father possessed considerable wealth and owned a beautiful place on the Isle of Wight, where the poet spent most of his boyhood. He was sent to Eton, and in 1856 went to Balliol College at Oxford. There he became intimate with a literary set which included John Nichol, T. H. Green, R. V. Dicey and James Bryce, the present British Ambassador to the United States. He did not distinguish himself particularly at Oxford, although he contributed prose and verse to a volume called *Undergraduates Papers*, edited by John Nichol. He left Oxford without having taken his degree in 1860. Following this he traveled on the continent of Europe, visiting Landor at Florence in 1864. Shortly before this tour he had published at his own expense his first volume of poetry, containing "The Queen Mother" and "Rosalind," two dramas in the Shakespearean style. Even before this he had made the acquaintance of Rossetti, Burne-Jones and William Morris and on his return from Europe he became closely associated with this group of pre-Raphaelites. The volume of verse had attracted no great attention, and in 1865 he published *Atalanta in Calydon*, a beautiful lyric drama cast in the mold of ancient tragedy. This was so well received that Swinburne was hailed as a new poetical star of the first magnitude. Following this he published *Chastelard*. This was based on the life of Mary, Queen of Scots, and in it appeared the first symptoms of Swinburne's eroticism, and it was as violently condemned by the critics as *Atalanta* had been praised. This he followed with the remarkable poems *Faustine* and *Dolores*, which caused even greater sensation than *Chastelard*. So great indeed was the shock to the British mind that when *Laus Veneris and Other Poems and Ballads* was published in 1866, the British publisher suppressed the first edition. To his critics Swinburne replied with unmeasured scorn in *Notes on Poems and Reviews*, published in 1866. It was at this time that the poet went to London to live, and passed much time with Theodore Watts-Dunton, Whistler, Burne-Jones and Rossetti. The struggle for liberty then going on in Italy excited his sympathy and resulted in *The Song of Italy* (1867) and *Songs Before Sunrise* (1871). In the meantime had appeared several lyrics on other themes, of which the finest was *Ave Atque Vale* (1868) in memory of Baudelaire. He continued the history of Mary, Queen of Scots, begun in *Chastelard*, with *Bothicell* in 1874, and afterwards completed it in *Mary Stuart* in 1881. *Bothicell* was received with an approval which critics for the most part had withheld from many of the lyrics. At about this time Swinburne turned his attention to prose and published a critical study of Shakespeare and an essay on William Blake. Following this came *Songs of Springtide*, which in turn was followed by *Mary Stuart*, noted above. In 1878 appeared a second series of *Poems and Ballads*; the great odes to Victor Hugo; various beautiful sonnets and several translations from Villon. In 1882 appeared the volume entitled *Tristram of Lyonesse and Other Poems*, which contained some of the most remarkable poetry of the sea ever written. 4

Century of Roundels appeared in 1883, and in 1884 *A Midsummer Holiday and Other Poems*. *Marino Faliero*, a tragedy, followed in 1885, and another tragedy, *Loeine*, in 1887. A third series of *Poems and Ballads* was published in 1889; *The Sisters*, a tragedy (1892); *Astrophel and Other Poems* (1894); *A Tale of Balen* (1896); and *Rosamund, Queen of the Lombards* (1899). Late in the poet's life came a number of prose works, among them being a novel entitled *Love's Cross Currents*, which, published in 1895, did not excite much comment.

On the death of Tennyson the judgment of the English-speaking world selected Swinburne for the post of poet-laureate, but his early attitude of defiant revolt against the conventional social order and against kings and priests prevented his appointment, though he was universally acknowledged as the greatest surviving English poet. In his later years the note of rebellion was less violently sounded and other feelings, the love of the sea and little children, held a large place in his poems. He holds a unique position as an artist in verse by his unsurpassed command of all the resources of metrical technique. He invented a number of new rhythmic forms and in the old which he used he developed new beauties. His work in prose criticism suffers from his faults of passion and prejudice and occasionally exaggeration. Swinburne was said by those who knew him well to have a singular lack of the sense of humor and this occasionally betrayed him into absurd performances. An amusing example of this was on the occasion of a public dinner, when he brought a footstool upon which he insisted upon sitting literally at the feet of Robert Browning. He was small of stature, standing scarcely five feet two inches, and was slight of frame and lean. In spite of this he had a sound constitution and led a vigorous life. He was a powerful swimmer, and he especially loved walking, in which he persevered without regard to the weather. His conversational powers were uncommon from his early youth, and despite of his lack of humor he was noted for his keenness of wit. Swinburne will undoubtedly live to posterity as one of the greatest and possibly the last of the Victorian poets.

SWINE. See STOCK RAISING.

SWITZERLAND. A federal republic of central Europe. Capital, Bern.

AREA AND POPULATION. Total area, 15,975 square miles; population (1900), 3,315,443; estimated, 1907, 3,525,256. Of the population in 1900, 2,312,949 spoke German, 730,917 French, 221,182 Italian, 38,651 Roumansch, 11,744 other languages. Of the 22 cantons, 15 are German, 5 French, one is Italian, and one Roumansch and Italian. There were, in 1908, 27,637 marriages, 99,464 births (including stillbirths), 60,920 deaths (stillborn 3223). Bern had (1909) 78,500 inhabitants; Zurich, 183,500; Basel, 129,600; Geneva, 121,200; Lausanne, 60,000; St. Gallen, 55,400; Chaux-de-Fonds, 38,700; Lucerne, 36,200; Biene, 28,800; Winterthur, 27,700.

EDUCATION. Education is controlled by cantonal and communal authorities; there is no centralization. Primary instruction is free and nominally compulsory; attendance is not strictly enforced in the Roman Catholic cantons. There were in 1905 4362 primary schools,

exclusive of infant, with 11,183 teachers and 502,211 pupils; 609 secondary schools, with 1794 teachers and 46,904 pupils; 42 middle schools (preparatory), with 892 teachers and 12,781 pupils; and 43 normal schools with 2885 students. There are a few special schools, and six universities. Illiteracy is rare in the Protestant cantons.

Entire religious toleration prevails, except that the order of Jesuits is debarred in the confines of the Confederation. There were, according to the census of 1900, 1,916,157 Protestants, 1,370,664 Roman Catholics, and 12,264 Jews.

INDUSTRIES. The Confederation, with its numerous and highly developed industries, is largely dependent upon the outside world for its supply of raw materials. The problem of housing and feeding its large industrial population is becoming more and more a vital one for Switzerland. Though wages are good, the cost of living has increased out of proportion. Cereals, flour, meat, sugar, etc., are imported in increasing quantities. Switzerland has no coal, no iron, no copper.

Agriculture is pursued by about 300,000 peasant proprietors (1,067,905 of the total population). Of the total productive area, 16.4 per cent. is under crops and gardens, 18.7 per cent. under fruit, 35.8 per cent. under grass and meadow, 29 per cent. under forest. Of the total area, 28.4 per cent. is unproductive. Rye, oats, potatoes, the vine, tobacco, etc., are grown, and cheese and condensed milk are manufactured. There were (1903) 2,080,297 cattle, 161,936 horses, 219,438 sheep, 555,261 swine, and 354,634 goats. Of the 2,105,214 acres of forest, 1,403,732 acres belong to municipalities, etc., 609,855 to private persons, 91,587 to the cantons. Federal supervision extends over 1,119,270 acres. See FORESTRY.

There were, in 1905, 242,543 industrial and commercial establishments, and 71,413 home industrial enterprises. Silks, cottons, linen, lace, thread, woolens, leather, gloves, pottery, watches and clocks, and tobacco and snuff are representative manufactures. The output of the breweries (177) in 1906 was 2,392,893 hectolitres. The sale of alcohol, etc., amounted in 1907-8 to 58,657 metric quintals of liquors for use as beverages and 61,875 for industrial purposes. The output of salt (1906) was 576,223 quintals; of cement, 535,841 metric tons. The number of cotton spindles in operation March 1, 1909, was 1,493,012.

COMMERCE. The special trade for three years is given in francs in the table on the following page.

Germany contributed imports valued at 512,702,000 francs, and received exports to the sum of 239,881,000; France, 283,577,000 and 117,211,000; Italy, 171,852,000 and 92,185,000; Austria-Hungary, 98,835,000 and 64,954,000; Great Britain, 87,012,000 and 178,538,000; United States, 60,680,000 and 111,796,000; Russia, 49,576,000 and 32,814,000; Belgium, 31,554,000 and 18,552,000; Rumania, 28,591,000 and 6,786,000. Russia and Rumania supply a large part of the wheat import; cattle come from Italy, Austria-Hungary and France; flour (about two-thirds) from Germany, and sugar from France, Germany, and Austria-Hungary.

COMMUNICATIONS. The total length of railways in 1908 was 3170 miles. Four of the main lines (1538 miles) have been taken over by the state, and a fifth, the St. Gotthard, was

Imports:	1906	1907	1908
Merchandise	1,469,059,498	1,687,426,688	1,487,149,157
Precious metals (money)	85,134,934	48,745,803	46,827,446
Total	1,554,194,432	1,736,172,491	1,533,976,603
Exports:			
Merchandise	1,074,868,562	1,152,938,259	1,038,437,322
Precious metals (money)	28,490,899	36,041,858	21,365,553
Total	1,103,359,461	1,188,980,117	1,059,802,875

to be acquired by April, 1909. In 1907 there were 5523 miles of telegraph lines, with 27,316 miles of wires; 10,913 miles of telephone lines, with 180,840 of wires. There were (1908) 1823 post-offices.

FINANCE. The unit of value is the franc, worth 19.3 cents. The revenue and expenditure are given for four years in francs as follows (1909 budget):

	1906	1907
Revenue.....	133,395,482	145,914,260
Expenditure.....	128,566,873	139,810,086

	1908	1909
Revenue.....	147,391,133	149,070,000
Expenditure.....	150,879,386	154,400,000

The main sources of revenue and the chief items of expenditure were estimated in 1909 as follows: Revenue—Customs, 69,942,000 francs; posts, 53,443,500; telegraphs, 14,863,-700; from state property, capital invested, etc., 5,202,619; military, 3,898,140; commerce, agriculture, industry 677,750; railways, 123,650. Expenditure—Posts, 52,683,200 francs; war, 40,192,344; interior, 16,165,508; telegraphs, 14,863,700; commerce, etc., 11,946,670; debt interest, amortization, administration, etc., 7,670,-825; customs, 7,528,050; railways, 527,300. The total public debt amounted, January 1, 1909, to 100,908,317 francs.

Of the 36 banks of issue existent in 1906, 11 had waived their right of emission December 31, 1908. Those remaining had paid-up capital amounting to 203,042,500 francs; average note circulation, 98,831,537. The National Bank, which commenced operations June 20, 1907, will ultimately be the only bank of issue.

ARMY. The army is a national militia in which service is universal and compulsory between the ages of 17 and 49, with few exemptions except for physical disability, and those who are excused or rejected pay certain taxes. Upon entering the service the recruit goes to the Auszug or Elite, where he spends 13 years (10 years for cavalry), with annual periods of service. Twelve years is spent in the Landwehr, where there is one training of 11 days, and six in the Landsturm, which is divided into "armed" and "unarmed" branches, the former being annually inspected and containing in addition to those coming from the Auszug and Landwehr all those able to bear arms but who have not been trained. The "unarmed" division comprises those available as non-combatants. The Auszug comprised 106 battalions of infantry, aggregating 95,469 men, 36 squadrons of cavalry with four main gun companies amounting to 5083. There were 78 field and

mountain batteries, 12 companies of fortress artillery and 10 foot companies, aggregating 17,913 men, and engineers and technical troops to the number of 5388. These various service and administrative divisions brought the total for the Auszug to 136,661 men. The Landwehr comprised 36 battalions of infantry, amounting to 48,337; 36 squadrons of cavalry, numbering 3890; 6595 artillery, 2501 engineers and technical troops, and other organizations, bringing the total up to 68,113, so that the total peace effective of the Swiss army in 1909 was 206,325. In the Swiss army there has been a gradual decrease in strength, due in part to increased strictness in the examination of recruits. Thus the effective strength has gradually fallen from 151,766 in 1901 to 138,798 in 1908. During that time the cavalry has increased from 4641 to 5113 men and the supply of remounts has been extended and better organized. A total of 74,825 horses, 18,511 heavy draft horses, and 2231 mules for mountain services were registered. The Landsturm, in which service was being shortened in pursuance of the law of 1907 increasing the length of the earlier periods, was organized in its armed division into 96 battalions of from 3 to 6 companies, with an effective strength of 54,067 men. In addition to infantry, other branches of the service were represented, and in 1909 it was decided to include mounted troops. The strength of the Landsturm in 1909 was estimated at 300,000.

GOVERNMENT. The executive authority is vested in a federal council of seven members, elected for three years by the National Assembly, and presided over by the President of the Confederation, who, with the Vice-President, is elected for one year by the Assembly from among the members of the Council. The legislative power resides in the National Assembly, consisting of two Chambers—the National Council, of 167 members, popularly elected, and the Council of State, of 44 members, chosen by the cantons. Within its boundaries each canton is sovereign, excepting for the restrictions imposed upon all by the Federal Constitution. President (January 1 to December 31, 1909), Dr. A. Deucher; Vice-President, R. Comtesse. The heads of departments (1909) were: Interior, M. E. Ruchet; War, E. Müller; Justice and Police, Dr. E. Brenner; Commerce, Industry, and Agriculture, J. A. Schobinger; Posts and Railways, Dr. L. Forrer.

HISTORY. Criticism of the present electoral system—*scrutin de liste* and absolute majorities—was renewed after the elections of October 25, 1908, and the movement for proportional representation was revived. In these elections 147 of the 165 deputies were re-elected to the National Council. Only two of the old members failed of re-election, the other changes being due to deaths or resignations. The same

mechanical uniformity was shown in the elections to the Federal Council. Thus representation did not conform to the actual state of political parties and any party not able to control a majority was forced into incongruous alliances, as for example, at Zurich, where Radicals, Liberals and Conservatives united against Socialists; at Bern, where Radicals and Conservatives did the same, and in the Canton of Thurgau and St. Gall, where Catholics, Conservatives, Socialists and Democrats united against Radicals. These points had been often urged against the system by the advocates of proportional representation. In 1900 the question of proportional representation had been submitted to popular vote and failed by a large majority, but its champions now believed that public opinion had changed. On January 10, 1909, at a meeting at Zurich it was decided to begin at once to secure the necessary 50,000 signatures for the referendum. The Radicals being strongly intrenched, it was necessary that the other parties should present a united front. The Catholics, however, seemed uncertain or even hostile; so success was doubtful.

The 400th anniversary of Calvin's birth was celebrated at Geneva on July 10. A serious crisis in the watch trade was reported in September. It was attributed to the British patent laws, the American tariff, the competition of the recently opened foreign factories, and the money stringency among the well-to-do classes. Early in November the budget estimates were submitted: Receipts estimated at 154,130,000 francs; expenditures at 159,450,000 francs; deficit, 5,320,000 francs.

SYNGE, JOHN MILLINGTON. An Irish dramatist and poet, died March 24, 1909. He was born in Dublin, in 1871, and was educated at Trinity College. He came under the influence of W. B. Yeats, and joined with him in the movement for the revival of the ancient Irish language and drama. With Yeats and Lady Gregory he was identified with the conduct of the Abbey Theatre in Dublin, the idea of which has been the establishment of a national drama. Synge's first plays, *Riders to the Sea* and *The Shadow of the Glen*, were produced in 1905. They at once established his reputation as a dramatist of a high order. In the same year he wrote *The Veil of the Saints*. Perhaps his most remarkable work was *The Playboy of the Western World*. This was produced at the Abbey Theatre in 1906. The first performance ended in a riot, and for a long time afterwards discussions concerning it occupied the Irish press. In 1908 he published *The Tinker's Wedding*, and at the time of his death was engaged on another Irish play called *Deirdre*. Synge was considered by many the first of the group of young Irish poets. He possessed great imagination and a rare delicacy of style. His sharp attacks on Irish institutions and conventions provoked bitter resentment in some political and religious quarters.

SYRACUSE UNIVERSITY. An institution of higher learning, at Syracuse, N. Y., founded in 1870. The attendance in 1909 was 3201, with 239 members of the faculty. There were in the library 78,321 bound volumes, and 23,977 unbound. During the year gifts were received to the value of \$136,711. Among the changes in the faculty were the resignations of Edwin L. Earp, professor of sociology, and Earl

E. Sperry, professor of history. The former was succeeded by Philip Parsons, and the latter by J. W. Wrench and E. P. Tanner. M. W. Blackman was appointed to the department of zoölogy, and Warren Hilditch to the department of chemistry. Professor Lisgar Eckhart was appointed to the department of philosophy, and Harold H. Brown to the department of chemistry. The productive funds of the college amount to about \$1,650,000, and the total income to about \$1,110,000. The chancellor is Rev. J. R. Day, LL. D.

SYRIA AND PALESTINE, EXCAVATIONS IN. See ARCHAEOLOGY.

TABB, JOHN BANNISTER. An American Roman Catholic priest, and educator and a poet of exceptional lyric powers, died November 19, 1909. He was born in Amelia county, Virginia, in 1845, and served through the Civil War in the Southern navy, becoming in 1864 a prisoner of war. He studied music in Baltimore and taught in St. Paul's School in that city, and in Racine College, Michigan. In 1872 he became a Roman Catholic, and in 1872-4, he was a student at St. Charles College, Maryland, and instructor of English there in 1875, and at various other periods to the time of his death. In the last months of his life his eyesight failed and he became entirely blind. He was the author of *Poems; Lyrics; An Octave to Mary; Rules of English Grammar; Poems Grave and Gay*, 1899; *Two Lyrics*, 1900; *Quips and Quiddities*, 1907.

TAFT, WILLIAM HOWARD. Inaugurated twenty-seventh President of the United States, on March 4, 1909. The chief events dealing with his administration will be found in the article UNITED STATES, under *Administration, Foreign Relations*, and other titles, and in general in the articles throughout the work dealing with the political history of the United States. He was born in Cincinnati, September 5, 1857, the son of Alphonso Taft, who, after having held many important judicial offices, was Secretary of War in 1876, and United States Minister to Austria-Hungary, 1883-5, and to Russia in 1885. William Howard Taft was educated in the public schools of Cincinnati and at Yale University, where he graduated in 1878. He was admitted to the bar of the Supreme Court of Ohio in May, 1880, and in the same year acted as law reporter to the *Cincinnati Times*. He was appointed assistant prosecuting attorney in January, 1881, and resigned in March, 1882, to become Collector of Internal Revenue for the first district of Ohio, under President Arthur. This office he resigned in 1883 to enter the practice of law, at which he continued until March, 1887. In that month and year he was appointed by Governor Foraker Judge of the Superior Court of Cincinnati, and in April, 1888, he was elected to succeed himself in this court. He resigned in February, 1890, to become Solicitor-General of the United States under the appointment of President Harrison, and from this office in turn he resigned in March, 1892, to become Judge of the United States Court for the sixth judicial circuit. In 1896 he became professor and dean of the law department of the University of Cincinnati. He resigned in March, 1900, the circuit judgeship and the deanship, and became by the appointment of President McKinley, president of the United States

Philippine Commission, and on July 4, 1901, he became the first civil governor of the Philippine Islands. After a brilliant administration of this post, he was appointed Secretary of War, taking office February 1, 1904. While in this office he visited Panama, the Philippine Islands and Cuba, in his official capacity, and succeeded in ameliorating unfavorable conditions which prevailed in those countries. He was nominated for President at the Republican National Convention on June 16, 1908, by 702 out of the total of 980 votes, and in the election which followed he defeated William J. Bryan by a popular vote of 7,811,143 to 6,328,601, and by an electoral vote of 321 to 102.

TALCOTT, ALFRED BISSELL. An American journalist and lecturer, died November 22, 1909. He was born at Glastonbury, Conn., in 1825. He became interested in electrical development in Boston in 1843, and was afterwards engaged in electrical work in New York. He took part in rebuilding the old telegraph lines between New York and Washington, and in 1859 went to Washington as manager of a telegraph company. In 1862 he became a war correspondent for the New York *Herald*, and reported the engagement between the *Monitor* and *Merrimac*. He is said to have operated the first field telegraph line used in the Civil War. He was connected with newspapers in Washington for many years after the war, and in 1892 became electrician of the House of Representatives.

TARIFF. During the latter half of the second Roosevelt administration, sentiment in the Republican party in favor of a revision of the tariff appeared very strong, especially in the Middle West. Even the advocates of extreme protection admitted that in the decade since the Dingley law went into effect, business conditions had changed so radically that revision of many of the tariff schedules had become imperative. A pledge of tariff revision was embodied in the Republican national platform of 1908, and the leaders of that party reached an agreement that the work of revision should be carried out in a special session of Congress to be called immediately after the inauguration of President Taft. In anticipation of this special session, and for the purpose of expediting the business of revision, the Ways and Means Committee held hearings on the tariff through the months of November and December, 1908, and collected an immense mass of testimony from representatives of the protected interests, from importers and other persons likely to be affected by the revision of schedules. Upon the basis of such information, a tentative bill was drafted by the Ways and Means Committee before the close of the regular session.

The schedules of the Dingley act that were generally believed to be most in need of revision were those relating to iron and steel and their manufactures; wood pulp and paper; sugar; hides and leather and leather manufactures; lumber; and petroleum. In all these cases powerful combinations had grown up under the shelter of the tariff; and the demand for tariff revision was in large measure reinforced by the demand for a more efficacious remedy for the evils of combination than that afforded by the Federal and State Anti-Trust laws. Very little attention was bestowed upon the textile schedules; it was generally believed that some

of the textile duties were too high; but that equalization, rather than reduction, of duties was desirable. It was anticipated that very marked reductions would be made in many items of other schedules, such as chemicals, glass and earthenware, and that the tendency of revision would be in the direction of freer trade.

The work of revision was first undertaken by the House, immediately upon the reassembling of Congress in special session. A bill was reported by Mr. Payne, Chairman of the Ways and Means Committee, and was passed after prolonged debate on April 9. This bill, which served as a basis for the act of 1909, placed iron ore on the free list, and made material reductions on iron and steel and their manufactures; on chemicals, coal, hides and lumber. Petroleum and its products were placed on the free list. A considerable number of the textile duties were increased, and the duties on gloves and hosiery were advanced so materially as to occasion vigorous opposition, especially in the Middle West. The bill provided for free trade with the Philippines, with a limitation, however, upon the amounts of sugar and tobacco that might enter the ports of the United States duty free. The bill also provided for the adoption of a system of maximum and minimum duties, to be employed as a means for compelling commercial concessions on the part of foreign countries. In principle, the minimum duties were to be fixed at a level giving satisfactory protection, while the maximum duties were to represent an addition of 20 to 25 per cent. to the minimum duties.

On April 12 a substitute measure, known as the Aldrich bill, was reported in the Senate. This bill made even fewer concessions to the revision sentiment than did the Payne bill. It presented a new schedule of silk and its manufactures, substituting specific duties generally for the *ad valorem* duties of the Dingley law. The cottons schedule was also thoroughly revised, on the same principle. In both cases very few reductions in duty were made, and numerous advances were in evidence. Iron ore, which had been placed on the free list in the House bill, was given a duty of 25 cents a ton; the rates on rough lumber were fifty per cent higher than in the House bill; the countervailing rates of the Dingley law on petroleum and its products, which had given these products a high degree of protection, were retained. The excesses of the House bill in the items of gloves and hosiery were avoided, but the Senate bill, as a whole, offered a decidedly smaller concession to the revisionists than did the House bill. As a consequence of the extreme character of the bill, a powerful group of Republican Senators from the Middle West, known as the "insurgents," carried on a vigorous campaign against it. The bill was nevertheless forced to passage on July 8.

On July 12 the Conference Committee took up the tariff project. The measure prepared by the committee was in the nature of a compromise, but largely through the influence of President Taft the more moderate provisions of the House bill were reflected in the compromise bill. This bill was reported to the two Houses on July 29, and was promptly passed by the House. In the Senate the measure was attacked vigorously by the insurgents, but it was passed unamended on August 5, and on the same day received the President's signature.

This act, popularly known as the Payne-Aldrich law, is officially designated as "An Act to Provide Revenue, Equalize Duties, and Encourage the Industries of the United States, and for other Purposes."

The tariff schedules materially affected by the new law are: Metals and manufactures thereof; cotton manufactures; silk and silk manufactures; chemicals, oils and paints; lumber; paper pulp and paper; hides and leather and leather products.

In the metal schedules the general tendency is in the direction of lower duties. Iron ore was reduced from 40 cents per ton under the Dingley law to 15 cents under the Payne-Aldrich law. Pig iron was reduced from \$4 per ton to \$2.50; scrap iron, from \$4 to \$1. Steel rails were reduced from \$7.84 per ton to \$3.92. Structural steel received a nominal reduction from \$10 to \$6 and \$8; but punched structural steel—the only form ready for use without further manufacture—was given a duty representing 40 per cent. in excess of the Dingley rate. The cheaper forms of boiler plate received a reduction in duty of 40 per cent. Steel ingots and similar products, valued at less than 24 cents per pound, received a reduction in duty of 2 per cent.; those valued at over 24 cents per pound received advances in duty ranging from 28 to 70 per cent. Iron and steel wire of the lower grades, which had been dutiable at 1½ cents per pound, was reduced to one cent. The rates on many classes of cutlery were materially advanced. Common razors, unfinished, received an advance amounting to 229 per cent. of the old rate. Finished razors, valued at \$1 to \$1.50 per dozen, received an advance of 65 per cent. The duty on nickel and its alloys was advanced from 35 per cent. *ad valorem* to 50 per cent. Zinc ore, which had been free, was made dutiable at one cent per pound of zinc content.

The cottons schedule was subjected to more thoroughgoing revision than any other. In this schedule specific rates were largely substituted for the *ad valorem* rates of the Dingley law, and an elaborate scheme of classification according to weight, number of threads and value was adopted. The effect of the revision is practically to retain the Dingley rates on the lowest grades of cotton fabrics, and to advance duties progressively on the higher grades. Cotton cloth, bleached, counting not over 100 threads to the square inch and valued at nine cents a yard or less, retained the Dingley rate; valued at nine to eleven cents, it takes a rate 22 per cent. in excess of the Dingley rate; valued at eleven to twelve cents, a 45 per cent. increase in rate; valued at twelve to fifteen cents, a 67 per cent. increase; valued at fifteen to sixteen cents, a 60 per cent. increase; valued at sixteen to twenty-five cents, a 75 per cent. increase. Similar discriminations in favor of the higher grade goods appear throughout the cottons schedule, and are explainable on the ground that the American manufacturer meets with foreign competition only in goods of the higher grades. The most remarkable feature of the cottons schedule is the heavy increase in the duties on mercerized cloth. All grades of mercerized cloth received an advance in duty ranging from 12 to 100 per cent., and comparatively few grades were advanced less than 30 per cent. The duties on cotton hosiery were advanced 33 per cent. on the lower grades and 22 per cent.

on the higher, reflecting the fact that foreign competition is more severe in the cheaper grades than in the dearer.

In the silk schedule a large number of *ad valorem* duties are replaced by specific duties; most of the changes represent an advance. No general principle is discernible in the revision of this schedule; in some cases the cheaper grades are subjected to the greater advances, in other cases the dearer grades. Woven fabrics dyed in the thread and containing less than 30 per cent. of silk received an increase of duty amounting to 79 per cent. of the Dingley rates; similar fabrics containing 30 to 45 per cent. of silk received an increase of 45 per cent.; fabrics containing 45 per cent. of silk and over received no increase whatever.

In the chemicals schedule the most noteworthy item is petroleum and its products, which is placed on the free list. These products had received protection amounting to virtually 100 per cent. *ad valorem* under the countervailing provision of the Dingley law. Sulphur was reduced from \$8 per ton to \$4; borax from 5 cents per pound to 2 cents; bicarbonate of soda from 4 of a cent per pound to ½ of a cent. Crude barites were advanced from 75 cents per ton to \$1.50 per ton, and many other materials for the manufacture of paint were advanced. The general effect of the new law is slightly to increase the duty on chemicals.

The duties on unfinished lumber, which had ranged from \$1 to \$2 per thousand board feet, under the Dingley law, are cut to 50 cents and \$1.25. The differential applied to finished lumber under the Dingley law was cut by about 25 per cent. The only important increase in the lumber schedule was shingles, raised from 30 cents per thousand to 50 cents.

Mechanically ground wood pulp is placed on the free list, but the old duties are retained on chemical wood pulp, with an additional countervailing duty to offset any export duty levied by the country of origin. The lower grades of print paper are reduced from \$6 per ton to \$3.75. The higher grades of paper, on the other hand, were given advances ranging from 10 to 25 per cent. of the old duties.

Hides, which had been given a duty of 15 per cent. under the Dingley act, are placed on the free list; leather is reduced from 20 per cent. *ad valorem* to 15 per cent.; shoes, from 35 per cent. to 20 per cent.

Among the items not entering into the schedules discussed above, and affected materially by the new law, are coal, reduced from 67 cents per ton to 45 cents, and works of art that have been in existence more than twenty years prior to the date of importation, which are placed on the free list by the new law. Cables and cordage, threads and twines, are given reductions amounting to about 25 per cent. of the Dingley rates. The duties on fresh meats are reduced from 2 cents per pound to 1½ cents.

During the discussion of the bill in Congress much popular attention was given to the question whether the new law represented a general decrease or a general increase in duties. This question never received a wholly satisfactory answer, and in the nature of the case, admits of none, for the present. Reductions in duty were more numerous than advances, but many of the reductions affected commodities of trifling importance. In many other cases the reductions are of no practical significance,

since the remaining duties are sufficient to exclude foreign competition. Thus the reduction in the duties on fresh meats can be of little practical significance, since the dressed meat industry can meet with no effective foreign competition. The reductions in the metals schedule are not drastic enough to impair the domestic producers' control of the home market. The reductions in the leather and the boot and shoe duties appear to be of no practical significance, since the manufacture of most grades of these goods has attained to a stage of development in which prices are fixed quite without regard to the tariff. The advances in the textiles schedules, on the other hand, are calculated to have a decided influence upon foreign competition. The most careful estimates of the probable revenue to be derived from the new law indicate a slight increase, even without an increase in volume of importations, and this would appear to justify the view that the new law represents a slight advance in duties.

In an endeavor to show that the tendency of the new law is toward a reduction in the cost of living, supporters of the law have laid stress upon the relative quantities of goods affected by a reduction of duties and of those affected by an increase of duties consumed by the American people. The whole volume of goods, whether of domestic or of foreign origin, enters into the computation. From this point of view it appears that the new law should materially reduce the cost of living. When, however, it is borne in mind that many of the reductions represent merely the removal of parts of the earlier duties that were ineffective, because excessive, it will be seen that no reduction in prices can be anticipated from them. It can not be supposed that the whole volume of fresh meat, of iron and steel, of petroleum and its products, will be reduced in price in consequence of the revision of schedules.

In some small measure the new law represents a movement in the direction of freer trade in the materials of manufacture. This is the case in the placing of hides, iron ore, and mechanical wood pulp upon the free list; in the reduction of duties on leather, rough lumber, coal, sulphur, and bicarbonate of soda.

The new act provides for free importation into the United States of all products grown in the Philippine Islands, and all manufactures of the Philippine Islands from materials more than 20 per cent. in value of which have been produced in the Philippine Islands or in the United States. Exceptions are made, however, of rice, sugar and tobacco. In the case of sugar an amount not in excess of 300,000 tons yearly may be imported duty free into the United States; in the case of tobacco an amount not in excess of 300,000 pounds of wrapper, 1,000,000 pounds of fibre and 150,000,000 cigars, yearly, may likewise be imported into the United States duty free. These amounts are greatly in excess of the amounts that would be likely to be offered for export in the Philippines; hence the measure grants effective free importation from the Philippines of all products except rice. In anticipation of a possible development of the sugar industry in the Philippines, it is provided that when more than the maximum amount is offered for export, preference in the right of free entry shall be given to the smaller producers. In consideration of the favorable treatment accorded to Philippine

products the law stipulates that all products of the United States shall enter the Philippines duty free. It is also provided that Philippine products that seek free entry into the United States shall pay no export duty in the Philippine Islands.

A novel feature of the act is the adoption of the principle of maximum and minimum tariffs as a means for compelling commercial concessions from other countries. The minimum tariff is constituted by the schedules described above; the maximum tariff is constituted by adding 25 per cent. to every duty in the dutiable list. The maximum tariff, in the absence of commercial agreements, is applicable to the products of all foreign countries; and the President was required by the act to give notice to all countries that had entered upon agreements with the United States of the termination of such agreements at the expiration of the period of notice fixed in the agreements; or, in case no period of notice had been incorporated in such agreements, they were required to be terminated on April 30, 1910. The President is authorized, however, when satisfied that any country, dependency or colony imposes no restrictions upon importations from the United States that unduly discriminate against the United States, and leaves no export duties that are unduly discriminatory against the United States, to extend to that country, dependency or colony the privileges of the minimum tariff of the United States. As in the case of the Dingley law, the new act levies countervailing duties upon products receiving export bounties in the country of origin. These countervailing duties are calculated to equal the export bounties, and the Secretary of the Treasury is required to ascertain and declare, from time to time, the amount of such bounties.

A special commercial provision of the act levies a countervailing duty upon paper pulp and paper which pays an export duty in the country of origin. The countervailing duty is to be equal to the export duty. This provision of the act is obviously directed against an established principle of Canadian commercial policy, and, in effect, represents an advance in duties on the products affected.

The provisions of the act relating to the application of the minimum and maximum tariffs evidently place upon the President a large burden of responsibility, since he is required to ascertain, not merely whether the several foreign countries discriminate against the products of the United States—which, indeed, many of them do—but also whether such discrimination is inherently unreasonable. Further, the discretion vested in the President necessitates his consideration of the consequences that would be likely to follow from the employment of the maximum tariff against any country. A large amount of technical information must, therefore, be placed at his disposal; and the President is authorized by the law to "employ such persons as may be required" to this end. In accordance with this provision of the law President Taft in September, 1909, appointed a commission of three experts, popularly known as a "tariff board," and in popular belief, endowed with the powers of a permanent tariff commission—a proposed adjunct of the legislative service widely advocated in recent years. The members of the board of experts appointed were Professor

Henry C. Emery and Messrs. Alvin Sanders and James B. Reynolds.

An important change in customs administration appears in the creation of a Court of Customs Appeals. The act provides that this court shall consist of a presiding judge and four associate judges, appointed by the President with the advice and consent of the Senate. Appeals from the decisions of the appraisers, whether as to the facts or as to the interpretation of the law, which prior to the enactment of the Payne-Aldrich law could be made to the Circuit Courts and thence to the Supreme Court, must, after the organization of the Court of Customs Appeals, be made to that court, and no appeal from its decisions is permitted. The action of Congress in creating this court was largely due to the belief of many of the supporters of the policy of protection that the Dingley act had lost part of its force through unfavorable judicial interpretation.

The revenues anticipated under the new act are slightly in excess of those produced by the Dingley act; but entirely insufficient to meet the deficits that were predicted if the latter act had remained in force. In order to provide additional revenues, it was proposed by Senators and Congressmen of both parties to enact an income tax essentially of the same character as the act that had been enacted in 1894 and later declared unconstitutional by the Supreme Court. President Taft urged, in lieu of this, a resolution submitting to the States the question of conferring upon the Federal government the right to levy a tax upon incomes, and for present fiscal needs, a tax upon the net incomes of corporations. It was pointed out that the latter tax would not only be an efficient revenue producer, but would also go far toward introducing publicity in corporation affairs. The President's plan prevailed, and an excess tax upon corporations was incorporated in the tariff law. All corporations, associations and joint-stock companies, having a share capital, and all insurance companies are required to pay a tax of one per cent. on all income in excess of \$5000, exclusive of income derived from the shares of stock in corporations subject to the tax. "Net income," in the meaning of the act, is found by deducting from gross income all ordinary and necessary expenses, all rentals and payments for franchises, all losses not compensated by insurance and a reasonable allowance for depreciation of property, and interest on bonded or other indebtedness to an amount not exceeding the paid up capital stock. Great uncertainty prevails as to the amount of revenue that this measure will produce, but estimates vary from \$20,000,000 to \$30,000,000. The feature of the law that has excited greatest opposition from business interests is the degree of publicity entailed by it, since all the details of the business of a corporation may be examined by the officers of the government in their attempt to ascertain net revenue.

CANADA. Among the tariff matters before the Canadian people and government, was the policy of preference for English goods. From 1900 to 1904, full preference of one-third in the import duties had been extended, and since then the Canadian Manufacturers' Association has steadily fought the small preference still retained. This Association with its 2400 members, includes about 90 per cent. of Canadian

manufacturers, and has tremendous political prestige. On the other hand the feeling was strong that Canada should not allow other nations, by maximum and minimum tariffs, to force her to abandon preference for British imports.

Another matter of importance was the negotiation of a trade convention with France. The Canadian tariff has three levels of rates, the general tariff, the intermediate tariff, with rates 5 to 10 per cent. lower, and the British preferential rates. The intermediate tariff was expected to serve as a basis for reciprocal trade concessions with other countries. The French tariff has two levels of rates (see below). In April the French Senate approved a treaty whereby the French minimum rates were conceded to Canadian goods, in exchange for the intermediate rates into Canada. This treaty would have been readily approved by the Dominion Parliament, had it not been for the passage of the Payne-Aldrich tariff by Congress, with its maximum and minimum schedules. It was feared that the United States would demand the same treatment as France. Moreover, approval of the French treaty would, under existing British treaties, give equal concessions on the part of Canada to Argentina, Bolivia, Colombia, Venezuela, Japan, Denmark, Russia, Spain, Austria-Hungary, Norway and Sweden. While the Canadian manufacturers believed themselves to be in a strong position for a tariff war with the United States, they were strenuously opposed to any lowering of rates on goods from that country, or to higher rates into that country. In spite of the insistent demands that approval of the treaty be withheld until the attitude of the Washington government could be learned, the treaty was ratified near the close of the year.

Upon both of the above matters, therefore, the Canadian officials and manufacturers were in a state of doubt at the close of the year. As the Payne-Aldrich law was finally approved, it contained the provision that the President shall have discretion of treating "any dependency, colony, or other political subdivision having authority to adopt and enforce tariff legislation," as a separate fiscal body. This was substituted for a provision in the original bill which expressly excluded preference between a mother country and a colony from consideration in the application of the maximum and minimum rates. Under the law the President had until April 1, 1910, to decide whether British preference or the French treaty constitute sufficient discrimination to warrant the imposition of the penalties provided by the Payne-Aldrich law.

The paper pulp duties also occasioned much discussion. The Dominion government exercises no authority over the wood pulp industry, this being left to the provinces of Ontario and Quebec. Both provinces aim to restrict the exportation of pulp, and to force the development of paper mills in their territory by placing a heavy export tax on wood pulp cut from Crown lands. Under the new tariff, the Washington authorities imposed retaliatory import duties, raising the rate on paper and pulpwood from \$3.75 to \$6.10 per ton. Should the maximum rate of \$15.60 per ton be imposed April 1, 1910, it would be prohibitive. On mechanically ground wood pulp, the present rate is \$2.00 per

ton when cut from Crown lands, otherwise free. The maximum rates would be from \$4.00 to \$4.50 per ton higher.

ENGLAND. During the course of the year the subject of import duties of a protective nature became an important political issue. At the Colonial Conference of 1907, the proposals of Mr. Chamberlain for reciprocal favors between Great Britain and her colonies had been a chief topic of discussion. It was there shown that the bonds of the empire could be strengthened in this way, only by the abandonment of the free trade policy by the mother country, and the substitution of a protective tariff, with preferential rates for the colonies. This subject led to the Tariff Commission, which made extensive and intensive inquiries into various industries. In addition to the numerous reports and memoranda issued in 1908, this Commission has issued a volume on the engineering industries, and a memorandum showing the course of the export trade in leading manufactures of England, Germany and the United States, under a number of different comparisons. The study of the engineering trades covers every phase, including home products, competing foreign goods in both the home and foreign markets, effects of foreign tariffs, employment and suggested remedial measures.

But it was not until after the introduction of the government's Finance Bill, in April, that the tariff became an issue of first importance. It had been foreseen that the government must provide additional sources of revenue in order to support its old-age pension scheme, and to carry on the naval construction made necessary by Germany's rapid naval expansion. It was expected by some that this needed revenue might be secured by a system of import duties. When, however, the Liberal government brought in a budget levying new internal taxes with far-reaching social reforms, the Conservatives at once joined the issue of tariff reform against free trade and a socialistic budget. Tariff reform leagues were formed in various parts of the country, and, under the leadership of Mr. Balfour, an active propaganda was begun and continued to the close of the year.

The argument on one side consisted largely of a restatement of the historic arguments for free trade, and appeals to the time-honored ideals of Cobden. It was also argued that England could not use a tariff to retaliate upon nations already committed to the protective policy, for these latter would be more likely to raise rates higher than to reduce them. The argument, familiar in America, that a tariff takes from consumers much more than is paid into the public treasury was also advanced.

The tariff reform arguments were numerous. Most frequent perhaps was the contention that a tariff was needed to retaliate against discriminating rates in other countries and to force other countries to grant more favorable trade conditions. Some held a tariff to be necessary to secure funds for the maintenance of the two-power standard for the navy. Others contended for it as a part of a wise and comprehensive Imperial policy, aiming to conserve the trade and defenses of the British Empire, make it invulnerable from attack and give the greatest wealth and vitality to the English people. Average wages in Great Britain and in the United States were compared to the great dis-

advantage of the British workman. The decline of English agriculture was strongly emphasized, it being shown that there were a million fewer persons in that industry in 1901 than in 1851. In this connection it was pointed out that there were almost 1,250,000 permanent paupers in Great Britain and Ireland, and about 2,000,000 other persons who occasionally were forced into a state of pauperism; that about 40 per cent. of the working population received less than five dollars (20 shillings) per week; and that the extent of unemployment was appalling. It was declared that England's markets being free, English wages were forced down to the level of her cheapest competition. It was shown that foreign countries were determining the character and scope of English industries, for, by the imposition of tariffs, rival industries had been built up in those countries with which English merchants had formerly traded, England's market had been restricted and her manufactures crippled. Moreover the policy of dumping carried on by large producers in protected countries rendered English trade precarious and uncertain. This latter condition, it was held, was forcing English capital to migrate to protected countries, while the best workmen likewise migrated, leaving the others to find whatever casual labor they could.

FRANCE. Early in the year the Customs Committee of the Chamber of Deputies brought in proposals for numerous changes in the tariff rates. The French import duties are classed under two headings. The general tariff, which is regarded as a weapon to force favorable terms from other countries, and the minimum tariff, the difference in the rates of the two schedules being about 50 per cent. The committee's proposals involved increases under 866 headings and reductions under two headings of the general tariff, and increases on 182 classes of imports under the minimum tariff. These proposals were taken up in the Council of Ministers in February. Great opposition developed owing to the highly protectionist spirit of the proposed changes. Protest from Switzerland, Germany and England was especially strong, and members of the government interposed serious objections to any legislation that would disrupt trade conventions and lead to tariff wars. It was largely on these grounds that the government decided very early to reject the proposals in so far as they related to articles mentioned in the Franco-Swiss Commercial Treaty. The revision was taken up in the Chamber of Deputies on June 15. In the debates that followed the examples of Germany and the United States and the existing conditions in England were frequently cited. The Socialists protested against an important piece of legislation which was not introduced by the government and which the people, and particularly the workingmen, had passed judgment upon. Early in July the Minister of Commerce stated the government's position to be opposed to wholesale revision, suggested the organization of a permanent bureau to deal with tariff problems largely on the ground that tariff wars would lead to commercial ruin. Somewhat later M. Jaurès, the Socialist leader, moved, and the Chamber voted, request the government to promote an international conference with a view to a gradual simultaneous reduction of tariffs. Upon opening of the fall session in October the

bate was renewed, the schedules being taken up in detail. The completed bill was then approved by a vote of 465 to 42 on December 29, and the measure sent to the Senate. See above in this article under *Canada* for trade treaty.

TASMANIA. An island state of the Australian Commonwealth. Area, 26,215 square miles. Estimated population (Dec. 31, 1908), 185,824. Capital, Hobart, with (including suburbs) 44,610 inhabitants. The executive authority is vested in a governor appointed by the Crown and assisted by a responsible ministry. The Parliament consists of the Legislative Council (18 members, elected for six years), and the House of Assembly (35 members, elected for three years). Both men and women vote. The Governor in 1909 was Maj. Gen. Sir Harry Barron; the Premier and Treasurer, Sir Neil Elliott Lewis. For statistics and other details, see *AUSTRALIA*.

The new Ministry under Sir N. E. Lewis, Premier and Treasurer, was temporarily overthrown on October 21, having encountered an adverse vote on its tax proposals, but the Labor Ministry then formed (under Mr. Earle as Premier), lasted only a week. The Anti-Socialist forces re-united and defeated the Labor Ministry by a majority of six, whereupon the Lewis government returned to power.

TEACHERS' SALARIES. See *EDUCATION IN THE UNITED STATES*.

TELEGRAPHY. Wire telegraphy has undergone no radical technical development in 1909. The extended employment of the high-speed printing equipment brought out in recent years shows it to be firmly established. European tests of the Pollak-Virag system over distances as high as 450 miles developed a speed of 45,000 words per hour. A vibratory system of multiple telegraphy has been given successful preliminary trials in France. Messages are transmitted by vibratory currents furnished by tuning forks of various frequencies and are selected out by resonators at the receiving station. A 500-mile line has been successfully operated with as many as eighteen simultaneous messages. Submarine cable work has been forwarded by the introduction of a quadruplex system which minimizes the retarding effect of the cable's capacity. A sine wave working current is employed in connection with auxiliary electromagnets which serve to quicken the action of the neutral relay and hold it steady during the reversals of the current.

The union of the leading telegraph and long distance interests constituted the most important commercial development of the year. The telegraph systems of America comprise more than 16,000,000 miles of single wire and about 8,000 miles of ocean cable, representing an investment of approximately \$250,000,000.

TELEGRAPHY, WIRELESS. See *WIRELESS TELEGRAPHY*.

TELEPHONY. The record of telephony in 1909 shows no exceptional developments in methods and equipment. The favorable state of the market led to a large amount of construction work. Long distance service has been much improved by the extensive connection of all and independent exchanges. Early in the

year a clearing company was organized among the independent interests for the promotion of long distance traffic. This company issues coupon books good for long distance service over 380,000 miles of line in the Eastern and Central States. The union of the leading American telegraph and long distance telephone interests overshadows all other commercial developments. Economies and improvements in service may be confidently expected from the joint operation of the circuits.

Much study has been devoted to the interference of high voltage power transmission circuits with long distance telephony and some new and highly effective remedies have been developed. Such problems as this, together with the increasing tendency to employ underground circuits, tend to make it increasingly difficult to maintain the efficiency of telephonic transmission and to necessitate continual refinements in the existing forms of equipment.

In exchange practice considerable use is being made of semi-automatic equipment, both in the handling of trunk connections and in the distribution of incoming calls among the operators. A few complete automatic equipments have been installed during the year.

Swedish inventors have recently produced a powerful long distance transmitter which gave very successful working over a distance of 1360 miles from Stockholm to Paris. It employs a light steel cylinder mounted on a diaphragm so as to make varying contact with a large surface of granulated carbon.

Conservative estimates show that the telephone industry of the United States gives employment to about 160,000 persons, pays more than \$75,000,000 annually in wages and salaries, operates 14,000,000 miles of wire and represents an aggregate investment of approximately \$1,000,000,000. The number of messages per annum exceeds 12,500,000,000. The magnitude of the industry in America is double that of the entire remainder of the world.

TELEPHONY, WIRELESS. See *WIRELESS TELEPHONY*.

TEMPERATURE, CRITICAL. See *CHEMISTRY*.

TENNESSEE. One of the South Central Division of the United States. Its area is 43,022 square miles. The population in 1909, according to a Federal estimate made in that year, was 2,248,404.

MINERAL PRODUCTION. The mineral production of the State has made great gains in recent years. Coal, iron and copper are the chief products. The total production of coal in the State in 1908 was 6,199,171 short tons, with a spot value of \$7,118,499. This was a decrease of 611,072 short tons in quantity and of \$1,371,835 in value from the production of 1907. The decrease in Tennessee would probably have been somewhat greater had it not been for the long strike in Alabama which resulted in some benefit to the industry in Tennessee. There were employed in the mines of the State 11,812 men. It is the only State in which by far the larger number of men work nine hours a day. Only five mines, employing 287 men, reported eight hours for a day's work, and nineteen mines, employing 1921 men, work ten hours a day. There were no serious labor disturbances in the coal mines of the State. In 1908 strikes oc-

curred at only four mines and involved a total of only 350 men. There were 34 men killed in the coal mines of the State and 195 injured in 1908. The total production of the State up to 1908 amounted to 90,503,772 short tons. It is estimated that the original contents of the field when mining began was 25,655,000,000 short tons. There were mined in 1908 635,343 long tons of iron as compared with 813,690 tons in 1907. The State ranks eighth in the production of iron; the value of its product in 1908 was \$876,007, as compared with a value of the product in 1907 of \$1,325,134. There were manufactured in 1908, 290,828 tons of pig iron, as compared with 393,106 tons in 1907. There were 21 blast furnaces in the State of which 12 were in blast and nine out on January 1, 1909. The copper product of 1908 was 19,459,501 pounds, valued at \$2,568,654. This was an increase of over half a million pounds in quantity over the product of 1907, but owing to the difference of average prices for copper for 1907-8 the value of the output in the latter year showed a decrease of \$1,209,969. Zinc is mined in considerable quantity and in 1908 688,149 pounds of spelter, valued at \$32,343, was produced. In the State in 1908 were mined 178.94 fine ounces of gold, valued at \$3699, and 57,696 fine ounces of silver, valued at \$30,579. Gold is obtained chiefly from placers and from the copper ores of Ducktown in Polk county. Phosphate rock was mined in 1908 to the amount of 455,413 long tons, valued at \$1,877,221, a marked decrease over the production of 1907, which was 638,612 tons with a value of \$3,047,836. Other mineral products of the State are building stone, lime, sand and gravel, and mineral waters, together with mineral paints, natural gas and sand-lime brick. The value of the mineral products of the State in the year 1908 was \$19,277,031, as compared with a value of the product of 1907 of \$26,525,004.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn 78,650,000 bushels, valued at \$55,055,000, from 3,575,000 acres; winter wheat, 8,320,000 bushels, valued at \$9,568,000, from 800,000 acres; oats, 4,000,000 bushels, valued at \$2,120,000, from 200,000 acres; barley, 24,000 bushels, valued at \$19,000, from 1000 acres; rye, 86,000 bushels, valued at \$83,000, from 8000 acres; buckwheat, 15,000 bushels, valued at \$11,000, from 1000 acres; potatoes, 2,250,000 bushels, valued at \$1,598,000, from 30,000 acres; hay 675,000 tons, valued at \$8,640,000, from 450,000 acres; tobacco, 53,290,000 pounds, valued at \$4,156,620, from 73,000 acres. The cotton crop of 1909 was estimated at 240,000 bales, as compared with 340,000 bales in 1908. The number of farm animals in the State on January 1, 1910, was as follows: Horses, 324,000; mules, 290,000; dairy cows, 321,000; other cattle, 565,000; sheep, 347,000; swine 1,264,000. The wool clipped in 1909 was estimated at 1,441,440 pounds.

FISHERIES. The value of the product of the fisheries of the State for the year ending December 31, 1908, was \$111,860. Of these products, the most important in point of value was buffalo, which were taken to the amount of 704,100 pounds, valued at \$22,360. Next in point of

value were catfish, \$19,940. Other important fish taken were black bass, \$12,560; mussel shells and pearls, \$13,590, and German carp, \$8150. There were 360 independent fishermen engaged in the fisheries of the State and 67 wage-earning fishermen were employed. The number of vessels engaged was 399, valued at \$9,360.

EDUCATION. The total number of pupils enrolled in the schools of the State in the year 1907-8 was 507,887, which was 22.85 per cent. of the population. The average daily attendance was 342,505. The total number of teachers was 10,005. The legislature of 1907 passed an important measure toward the betterment of the schools in the State. Under the provisions of this act the county is made the unit of school organization instead of the school district, and the Board of Education, composed of five members, in the county takes the place of the three District Directors for the district under the old district system of organization. This legislature gave in round numbers to the educational institutions of the State \$1,400,000. The average monthly salary of teachers is \$37.10.

FINANCE. The report of the State Treasurer for the years 1907-8 showed a balance in the treasury on December 20, 1908, of \$1,163,750. The total receipts from December 20, 1906, to December 19, 1908, inclusive were \$7,266,341, and the disbursements for the same period were \$7,297,191, leaving a balance in the treasury on December 20, 1908, of \$1,132,900.

CHARITIES AND CORRECTION. The charitable and correctional institutions of the State included the Middle, Eastern and Western Hospitals for the Insane, the Tennessee Industrial School, the Blind Girls' Home, and the various State prisons and penitentiaries.

LEGISLATION. Among the measures enacted by the legislature of 1909 are those noted below: Laws were enacted the effect of which is State-wide Prohibition. (See PROHIBITION and the paragraphs below.) A board of commissioners on uniformity of legislation was established; provision was made for primary nominations for all offices except those of judges and attorneys-general; a library commission was created; a general education bill was passed, and 25 per cent. of the gross revenues of the State were appropriated for its purposes; the sale of agricultural seeds was regulated; provision was made against the spread of disease among cattle; measures were passed regulating fire insurance and it is provided that persons shall not be disqualified as jurors because of opinions based on newspaper reports or rumors. A law was passed for the punishment of false statements on packages of merchandise as to weight and measure.

POLITICS AND GOVERNMENT. The chief political interest in the State centred about the passage of the Prohibition bill. The bill was strongly opposed by Governor Patterson, but it was passed on June 12 in the Senate by a vote of 20 to 12, and on June 13 in the House by a vote of 62 to 36. The struggle attending the passage of the bill in the House was probably the fiercest ever known in the political history of the State. The bill was vetoed by Governor Patterson on January 19. He assigned as his reasons for this action that the bill was against the will of the majority, that it defied the Democratic platform, that arbitrary Prohibi-

tion laws are not obeyed, that it destroyed revenue, at the same time fomenting discord, and resulting in money being sent abroad, that it was intemperate, tending to foster aristocracy, and that it would teach the youth of the State daily lessons of evasion and duplicity. On January 20 the bill was repassed over the Governor's veto by a vote of 20 to 13 in the Senate and 61 to 36 in the House. The legislature also passed bill prohibiting the manufacture of intoxicants in Tennessee after the 1st of January, 1910. This bill was also vetoed by the Governor and was repassed over his veto. This bill bars the manufacture or sale of any alcoholic beverage in the State of Tennessee. The State-wide Prohibition law went into effect on July 1, 1909. This law makes it illegal to sell alcoholic beverages within four miles of any schoolhouse in the State. By this provision only two places remain in the State where liquor can be sold. Both are within 12 miles of Memphis, near the Mississippi State line. The nearest schoolhouse is six miles from both these points. The only counties in the State in which local option had not already prevented the sale of liquor were Memphis, Chattanooga and LaFollette counties, and as the result of its passage the entire State becomes Prohibition.

Measures were at once taken on the part of the liquor and brewer interests against the validity of the law, but on September 3 it was upheld in all of its provisions, except as regards sales for shipment outside of the State, in an opinion handed down by Chancellor T. M. McConnell. The court holds that interstate commerce laws take precedence over State laws in shipments outside the State. On February 19 the legislature passed over the veto of Governor Patterson measures providing for a compulsory, legalized primary, and for creating, without the aid of the executive, State and county election boards. On February 28, thirteen members of the Senate were declared in contempt by that body for leaving the State in order to defeat its laws. On March 3, the legislature in joint session maintained a quorum and elected State officers, thus defeating the purpose of the Senators who left the State in order to prevent action thereon. See ELECTORAL REFORM.

OTHER EVENTS. In January, eight men were found guilty of being concerned in the murder of Captain Quentin Rankin at Reelfoot Lake on October 19, 1908. Six of them were sentenced to death. Several of the men implicated turned State's evidence and the names of practically all the band concerned in the murder were given. During the progress of the trial the witnesses were surrounded by armed soldiers and escorted from the jail to the courtroom at each session of the court. Many stories were told by witnesses of cruelties by members of this band on those who had incurred their displeasure. On July 3, the Supreme Court of the State reversed the verdict and directed that the men be given a new trial, on the ground that the grand jury which had found the indictments against them had not been selected in a proper manner and that the State did not allow the defendants a sufficient number of challenges. On March 20, Col. D. Cooper and his son, Robin J. Cooper, were found guilty of murder in the second degree for the killing of former Senator E. W. Carmack on November 9, 1908. The trial began on January 20, 1909, and was one of the most sensa-

tional trials conducted in the State. The penalty for the crime was fixed at 20 years' imprisonment for each man. On May 11 a verdict of guilty, with imprisonment for ten days in jail and a fine of \$500 was returned by the jury in the case of fourteen night riders, charged with whipping J. M. Reese on October 15, 1908. Mr. Reese was taken from his home in Waverly at night and was forced to walk into the woods and there receive 25 blows because the night riders declared he had talked too much about the night riders. After a trial lasting 23 days the jury brought in a verdict of guilty against Marcellus Rinehart, and other night riders for the murder of Rufus Hunter, a farmer in the dark tobacco district of Montgomery county, on June 8, 1908.

On May 24 the Supreme Court of the United States rendered a decision finding the sheriff of Hamilton county, his deputy and some other persons guilty of contempt of court as the result of the lynching of a negro confined in jail in Chattanooga. The prisoner had been sentenced to death by the local courts, but the Supreme Court had granted an appeal. In spite of this the sheriff and others offered no resistance to the actions of a mob which attacked the jail, took out and lynched the prisoner. According to the opinion of Chief Justice Fuller, who rendered the decision, they were adjudged guilty of contempt of court because of their declared disapproval of the Supreme Court and the sheriff's assertion that the court was responsible for the lynching for the reason that the people would not submit to a delay. Three justices of the Supreme Court dissented from the decision on the ground that the age and the physical condition of the sheriff precluded any resistance on his part to an armed mob, and that the fact that he did not attempt to kill any member of it showed no evidence of complicity with those guilty or of contempt of court.

On April 30 the most destructive tornado for many years passed over the middle and western parts of the State, causing the loss of more than a score of lives and property valued at hundreds of thousands of dollars. The region visited included Montgomery, Hickman, Williamson, Rutherford and Humphreys counties in the middle of the State, and Carroll, Madison and Hardeman in the western part. In the latter part of May storms cost several lives and did much damage to property along the Mobile, Jackson and Kansas City Railroad.

OFFICERS: Governor, Malcolm R. Patterson, Secretary of State, H. W. Goodloe; Treasurer, R. E. Folk; Commissioner of Agriculture, John Thompson; Superintendent of Public Instruction, R. E. Jones; Comptroller, Frank Dibrell; Adjutant-General, Turley Brown; Attorney-General, Chas. T. Cates—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, W. D. Beard; Justices, B. D. Bell, W. K. McAllister, M. M. Neil and John K. Shields; Clerk, Joe J. Roach—all Democrats.

The State Legislature of 1909 was composed of 28 Democrats and 5 Republicans in the Senate, and 77 Democrats and 22 Republicans in the House. The State representatives in Congress will be found in the section *Congress* of the article UNITED STATES.

TETANUS. The *Journal of the American Medical Association* in its seventh annual sum-

mary of Fourth of July injuries show that in 1909 there were 150 cases of tetanus, the largest number since 1903, when there were 415 cases. It is noteworthy that the large number of tetanus cases corresponds with the increased number of blank cartridge wounds, of which there were 1095 reported in 1909; that the States having the largest number of blank cartridge injuries had also the greatest number of deaths; and that there was a higher percentage of deaths from such injuries (10.2 per cent.) than from gunshot wounds (6.1 per cent.). The indictment against the blank cartridge is therefore fairly complete, 86.5 per cent. of cases being due to this agency. Wounds were usually in the hand. Seven days on an average elapsed between the receipt of the wound and the development of tetanus in the fatal cases, and death ensued in the average case in ten and a half days after the development of the first symptoms. Of the total of 150 cases of lockjaw reported, 125 (or 84 per cent.) ended fatally. Irrespective of tetanus, there were 215 deaths from fireworks; 17 persons were killed outright by fire-arms, 16 by explosions of powder, 7 by giant firecrackers, 7 by toy cannon, and 37 were burned to death by fire and explosives, many of which were of the so-called harmless variety. Of non-fatal injuries there were 5092. These included 16 people who were totally blinded, 36 who lost one eye each, 41 who lost legs, arms or hands, and 178 who lost one or more fingers. The peculiar danger of the blank cartridge pistol wound lies in the fact that it is often very slight, and it is frequently untreated or treated insufficiently or too late. Every such wound should be promptly laid open, thoroughly cleansed from all foreign materials, cauterized and dressed antiseptically. A prophylactic injection of tetanus antitoxin should be administered to the patient. Under such treatment very few deaths would occur. The unusual increase in the number of deaths and injuries this year was thought to be due to the fact that the celebration was spread over three days, the Fourth of July falling on Sunday.

TEXAS. One of the South Central Division of the United States. It is the largest State in the Union and has an area of 265,806 square miles, of which 3498 square miles are water surface. The population in 1909, according to a Federal estimate made in that year, was 3,780,574.

MINERAL PRODUCTION. Texas is one of the most important States in the production of petroleum, although in recent years the amount produced has suffered a decline, and this continued in 1908 in spite of new finds south of the developed fields. The production in 1908 was 11,206,464 barrels, as compared with a production in 1907 of 12,322,696 barrels. The value of the product for 1908 was \$6,700,708, as compared with a value of the 1907 product of \$10,401,363. The leading fields are the Humble (3,778,521 barrels); the Batson (1,593,370 barrels); Sour Lake (1,595,060 barrels) and the Saratoga (1,634,786 barrels). The Humble field developed many good producers in 1908 and did more than any other region to check the decline in the State's production. Texas ranks fourth among the States producing petroleum, being surpassed only by Oklahoma, California and Illinois. Texas was one of the few States which showed an increase in the production of coal

in 1908 over 1907. Part of this increase was due to the continued decrease in the production of petroleum and its use for fuel purposes within the State. There were mined in 1908 1,895,377 short tons of coal, having a spot value of \$3,419,481. This was an increase over the output of 1907 of 247,308 short tons in quantity and \$642,670 in value. The coal mined is bituminous and lignite. The former was mined in 1908 to the amount of 1,047,407 short tons and the latter to the amount of 847,970 short tons. The branch line of the Wichita Falls and Southern Railway Company from Wichita Falls to the bituminous coal areas of Young county was completed in 1908 and that county entered the list of producers with a total output of 1000 tons. The bituminous coal mines in McCullough county were idle in 1908. There were employed in the coal mines of the State in 1908 4400 men as against 4227 in 1907. The estimated original supply of bituminous coal in Texas is placed at 8,000,000,000 short tons and that of lignite at 23,000,000,000 short tons. There had been produced up to the beginning of 1909 a total of 16,340,225 short tons of both varieties. Texas produced clay products in 1908 to the value of \$2,066,735, as compared with a value of \$2,557,561 in 1907. There are produced also large quantities of stone, quicksilver and lime. Other mineral products are coal products, asphalt, sulphur, salt, sand and gravel, mineral waters, iron ores, pig iron, lead, natural gas, and sand-lime brick. The value of the mineral products of 1908 was \$15,212,929, as compared with a value of the product of 1907 of \$19,806,458.

The production of coal was about the same in 1909 as in 1908.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 122,250,000 bushels, valued at \$92,910,000, from 8,150,000 acres; winter wheat, 5,050,000 bushels, valued at \$3,959,000, from 555,000 acres; oats, 11,500,000 bushels, valued at \$7,130,000, from 615,000 acres; barley, 78,000 bushels, valued at \$78,000, from 4000 acres; rye, 45,000 bushels, valued at \$55,000, from 4000 acres; rice, 9,894,000 bushels, valued at \$7,717,000, from 291,000 acres; potatoes, 3,000,000 bushels, valued at \$3,180,000, from 60,000 acres; hay, 587,000 tons, valued at \$6,985,000, from 618,000 acres; tobacco, 650,000 pounds, valued at \$170,300, from 1000 acres. The corn crop of 1909 showed a great decrease from that of 1908, which was 201,848,000 bushels. The acreage, however, increased from 7,854,000 to 8,150,000. The crop of winter wheat in 1909 was hardly half that of 1908, which was 10,184,000 bushels. The acreage fell from 924,000 to 555,000. In the production of rice Texas is surpassed only by Louisiana. The rice crop of 1909 was slightly larger than that of 1908, which was 9,142,500 bushels. The acreage increased somewhat in 1909. The cotton crop of 1909 was estimated at 2,570,000 bales. The State has long ranked first in the production of cotton. The tobacco crop fell from 2,400,000 pounds in 1908 to 650,000 pounds in 1909, while the acreage decreased from 3000 to 1000. The farm animals on January 1, 1910, were as follows: Horses, 1,369,000; mules, 702,000; dairy cattle, 1,137,000; other cattle, 7,131,000; sheep,

1,900,000; swine, 21,153,000. The wool clipped in 1909 was estimated at 8,923,040 pounds. The production of sugar in Texas in 1909 was estimated at 10,000 tons.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions of the State include the Texas School for the Deaf at Austin, the Institution for the Deaf, Dumb and Blind Colored Youths, the Texas School for the Blind at Austin, the State Epileptic colony at Abilene, the Southwestern Insane Asylum at San Antonio, the State Lunatic Asylum at Austin, and the State penitentiaries.

FINANCE. The report of the State Auditor for the year ending August 31, 1908, showed a balance in the treasury on September 31, 1907, of \$1,403,974. The receipts for the year ending August 31, 1908, were \$10,741,035. The disbursement for the same period amounted to \$10,743,211, leaving a balance on hand September 1, 1908, of \$1,401,798. The bonded debt of the State was about \$4,000,000, of which nearly all is owned by school funds.

FISHERIES. The value of the products of the fisheries of the State for the year ending December 31, 1908, was \$445,890. Of these products the most important in point of value was oysters, of which 497,200 bushels, valued at \$167,880, were taken. Next in point of value was red snapper, of which 2,251,600 pounds, valued at \$78,810, were taken. Following in point of value were channel bass, \$42,860; catfish, \$26,220; sheepshead, \$14,080; and buffalo, \$7430. Other fish taken in considerable quantities were pike, crabs, shrimp, terrapin, and croaker. There were 1063 independent fishermen engaged in the fisheries of the State and 717 wage-earning fishermen employed. The vessels employed numbered 121, with a value of \$219,118.

EDUCATION. The attendance for the school year 1907-8, the latest date for which figures are available, was \$496,361. There were 4761 white male teachers employed and 11,120 female; colored teachers, 1293 male, and 3120 female. The average annual salary of teachers was \$346.62. The net expenditure for the maintenance of schools was \$9,511,240.

POLITICS AND GOVERNMENT. The chief political interest in the State during the year centred about the conflict between Governor Campbell and the State Legislature in regard to the passage of certain measures, including the provision for a constitutional amendment carrying State-wide Prohibition, laws providing for State bank guaranty, and measures providing for elimination of race track betting in the State. Proposed constitutional amendments submitting the question of State-wide Prohibition to the people were introduced into both branches of the legislature on January 14. Governor Campbell recommended submission of the proposition in his message on February 5. The measure was killed in the House by a vote of 85 to 44, being two less than the necessary two-thirds, and in the Senate by 19 to 12. The regular session of the legislature came to an end on March 13, and Governor Campbell issued a call immediately for a special extraordinary session for the purpose of passing a State bank guaranty bill and other measures of minor interest. A new session at once convened. The Senate on the same day by a vote of 21 to 8 expelled Senator Bascom Thomas from his seat, for charges of corruption which he had publicly

made and which he failed to substantiate before a special committee appointed to take testimony. (Mr. Thomas was subsequently re-elected by his constituents.) Governor Campbell immediately issued a call for a special election to be held on April 3 to fill the vacancy caused by the Thomas expulsion. On April 11, Governor Campbell aroused bitter feelings on the part of many members of the House and Senate by an official communication in which he charged that the legislature was influenced by "the most infamous lobby that ever trampled upon the will of the people." He said: "The regular session of sixty days was of little value to the people. Not a single platform demand was enacted into a law. One was defeated and you adjourned without even considering the appropriation bill, whereupon the lobby applauded and it is not strange that you received from the newspapers the felicitations of the Chairman of the Republican Executive Committee of this State. Probably the boldest, the most arrogant and the most formidable lobby, made up of the combined selfish interests, that ever assembled at the Capitol, gathered here at the assembling of this legislature." Governor Campbell charged that although the legislature had been in regular session since January 12, everything that had been done in the way of legislation could have been done in ten days. As a result of this breach between the legislature and Governor Campbell the former refused to pass the State guaranty bill, and adjourned without taking action. A second extraordinary session was convened on April 12, and at this session the State Bank guaranty bills and the bills preventing betting at race tracks were passed.

The long-standing litigation between the State authorities and the Waters-Pierce Oil Co., came to an end on April 24, when the oil company paid the fine of \$1,808,753, assessed against it by the State. See STANDARD OIL CO.

Henry Clay Pierce, president of the Waters-Pierce Oil Company was indicted in 1907 as the result of an affidavit made by him in 1900, which enabled his company to be admitted, following the first expulsion. Mr. Pierce was arrested in May, 1907, but resisted extradition and appealed to the Federal courts. This appeal finally reached the United States Supreme Court which, on January 1, 1909, decided that Mr. Pierce must return to Texas for trial. On April 11, 1909, another indictment was found against Mr. Pierce, making an additional charge of perjury against him, alleging that he was guilty of perjury and false swearing in connection with the readmission of the Waters-Pierce Oil Company to do business in Texas. Mr. Pierce returned to Texas for trial on November 28 and in the court proceedings he was acquitted upon the instructions of the court, no evidence being submitted to the jury. His lawyers urged immunity and it was sustained by the court, and this resulted in the instruction for acquittal. In a proceeding in Missouri, Pierce gave testimony relative to a stock ownership in the Waters-Pierce Oil Company, which the Texas authorities claimed to be in direct contradiction to the averments of his 1900 affidavit. The Missouri testimony was offered in the Texas penalty and ouster case. Mr. Pierce, in a hearing before a commission in New York, admitting it to be true. The statutes of Missouri and

Texas provided exemption and immunity in certain cases, and the Travis county district judge said the intent was plain to construe the statutes to extend to the conditions concerning him and ruled out that testimony. Inasmuch as that was all the Texas authorities could offer, the case came to an abrupt end before testimony was offered.

Among the most important political events in the State during the year was the investigation carried on into the conduct of the State penitentiaries by an investigating committee. Excessive cruelty, lack of sanitation, muddled books, excessive cost of construction of State railroads, improper methods of prison management and an entire lack of penal reform were among the matters brought out. The committee made a special report to the Governor which was to be followed by others. See ELECTORAL REFORM.

OTHER EVENTS. On April 3, a fire which destroyed nearly \$4,000,000 worth of property and caused the loss of one life spread over a large area of the city of Ft. Worth. The heaviest loss was suffered by the Texas Pacific Railroad, whose round-houses, shops, and freight depot were burned, together with 20 engines and 150 cars. The Broadway Baptist Church and the Broadway Presbyterian Church were also burned, and 500 families were made homeless. Several of the largest wholesale groceries of the city were burned. On May 30, the town of Zephyr was visited by a tornado. More than 25 persons were killed and many injured. On July 21, a storm on the Gulf gave the new sea wall at Galveston its first real test and it was found equal to the emergency. Two large bath-house pavilions outside the wall, and two fishing piers extending into the Gulf were destroyed by the waves. Five persons perished on the Tarpon Fishing Pier, six miles from the city across the Bay. Two fishing piers on the North Jetty (Tarpon and Beltison) five and seven miles out in the Gulf were destroyed and 38 persons were rescued from Beltison and 6 from Tarpon. The sea wall successfully withstood the force of the waves. The effects of the storm were felt inland for nearly 200 miles and many small buildings were blown down in the territory fifty miles back from the coast.

LEGISLATION. Among the measures enacted by the legislature of 1909 are those noted below: A library commission was established and instruction in manual training, domestic science and agriculture was provided for. A board of public health was created, and the establishment of a home for lepers was authorized. A pure food law was enacted; measures were passed regulating the practice of nursing, and providing for the inspection of plumbing. Provision was made for prospecting the mineral resources of the State, and for agricultural experiment stations, and the protection of trees, plants and shrubs against disease. A number of laws were passed regulating railroad operation, among them one prohibiting more than sixteen hours consecutive service in the operation of trains. Blacklisting is forbidden and penalties are imposed for delays in adjusting claims. The law of comparative negligence is adopted in railroad cases. The liquor laws are made more rigorous and various forms of gambling, including betting on horse races, are prohibited. Provision is made for the guaranty of

bank deposits by either giving a bond or contributing to a deposit fund.

OFFICERS: Governor, T. M. Campbell; Lieutenant-Governor, A. B. Davidson; Secretary of State, W. B. Townsend; Treasurer, Sam Sparks; Comptroller, John W. Stephens; Superintendent of Public Instruction, R. B. Cousins; Land Commissioner, J. T. Robison; Attorney-General, R. V. Davidson; Commissioner of Agriculture, E. R. Kone; Commissioner of Insurance, T. B. Love—all Democrats.

JUDICIARY. Supreme Court: Chief Justice, Reuben R. Gaines; Associate Justices, Thomas J. Brown and F. A. Williams; Clerk, F. T. Connerly—all Democrats.

The State Legislature of 1909 was composed of 30 Democrats and one Republican in the Senate and 106 Democrats and three Republicans in the House. The State representatives in Congress will be found in the section *Congress* of the article UNITED STATES.

TEXTILE MANUFACTURING. The increased number of textile mills constructed during 1909 indicated that the various textile industries were in a more prosperous and active condition than in 1908, when the new construction was the smallest in ten years. The *Textile World Record* in its annual report of mill construction for 1909, from which the accompanying tables and statistics are derived, stated that every branch of the textile industry, cotton, woolen, knitting and silk, showed an increase which reflected the revival of business.

In the cotton industry the South continues its rapid progress, for 42 mills with 527,128 spindles were built, as compared with 22 in New England with 599,000 spindles, and 16 in the Middle and Western States with 79,968 spindles. The total increase in the number of spindles, 1,206,496, is greater than for any year since 1900, when it amounted to 1,306,784. Analysis of the statistics shows that while more cotton mills were erected in the South, those in New England were much larger than in other sections and thus hold good. Also when weaving as well as spinning are considered, New England showing 12,002 looms, as compared with 13,721 outside of that group of States.

NEW COTTON MILLS

New England	No.	Spindles	Looms
Connecticut	4	24,000	519

The cotton census issued by the International Federation of Cotton Spinners' and Manufacturers' Associations on August 31, 1909, gave the following statement of the cotton spindles in each country:

Great Britain	53,311,630
Germany	10,162,908
France	7,000,000
Russia	7,800,000
Austria	4,351,910
Italy	4,000,000
Spain	1,900,000
Japan	1,731,587
Switzerland	1,496,698
Belgium	1,231,165
Portugal	450,696
Holland	424,773
Sweden	450,000
Norway	75,844
Denmark	77,558
United States	27,783,000
India	5,800,000
Canada	855,293
Mexico, Brazil and other countries....	2,600,000
Total	131,503,062

The figures for 1909 for the United States in the above table, as well as in the comparative statement below, are based on the preliminary reports to the Bureau of the Census and were believed to be somewhat below the true numbers. Those for earlier years are the result of final tabulations.

Year.	United States	Spindles
1909	27,783,491	
1908	27,505,422	
1907	26,375,191	
1906	25,250,096	

The total of woolen and worsted mills compares more than favorably with 1909, when but 22 were constructed. Previous years construction were: 1907, 25; 1906, 56; 1905, 38; 1904, 45; 1903, 65. In the list of new mills 3 were carded woolen spinning mills with 8 sets of cards and an estimated daily consumption of 1200 pounds of scoured wool, and 11 were worsted spinning mills, two of which alone had an estimated daily consumption of 75,000 pounds of scoured wool.

The 104 new knitting mills reported for 1909 was a slight increase over 1908, when 92 new mills were reported and indicated that a steady and constant growth was being manifested in this industry as the new mills reported in earlier years were as follows: 1907, 83; 1906, 103; 1905, 79; 1904, 111; 1903, 105.

THACHER, JOHN BOYD. An American publicist and collector, died February 25, 1909. He was born at Ballston, N. Y., in 1847, and graduated from Williams College in 1869. He was a member of the New York State Senate in 1884-5, and introduced many measures relating

to the betterment of tenement house conditions. In 1886, 1887, 1896 and 1897 he was mayor of Albany. He was chairman of the Bureau of Awards at the World's Columbian Exposition in 1890. Mr. Thacher was a notable collector of autographs and manuscripts. His collection of the former is said to have numbered over 25,000. His collection of historical manuscripts was also remarkable. He wrote much on historical subjects, among his works being *The Continent of America: Its Discovery and Its Baptism* (1896); *Christopher Columbus: His Life; His Works; His Remains* (1903-4); *Outlines of the French Revolution, Told in Autographs* (1905).

THEODOR, KARL, DUKE IN BAVARIA. A German prince and eye specialist, died November 30, 1909. He was born at Possenhofen in 1839. He became an officer of artillery and attained the rank of general in the Bavarian army. His natural inclination, however, was toward science and early in life he took up the study of medicine at the University of Munich, graduating with the degree of M. D. He was not allowed to practice, however, until 1880, and then he was obliged to secure a special decree of the German Imperial Chancery permitting him to do so. He turned his attention to diseases of the eye and became one of the most famous of all European specialists. He was the author of several books and memoirs upon ophthalmological topics. One of his sisters was the Empress of Austria, wife of Francis Joseph. Another was the Duchesse d'Alencon, who lost her life in the Paris Charity Bazaar fire on May 4, 1907. He married Sophie, Princess of Saxony, who died, and he later married Maria Josefa.

THEOLOGICAL SEMINARIES. See UNIVERSITIES AND COLLEGES.

THEOSOPHICAL SOCIETY, THE. An organization of theosophists, founded in New York City in 1875. Its headquarters were in 1879 removed to Adyar, Madras, India. The objects of the society are: To form a nucleus of the universal brotherhood of humanity without distinction of race, creed, sex or color; to encourage the study of comparative religion, philosophy and science; to investigate unexplained laws of nature and powers latent in man. There are various sections of the Society: in America, Great Britain, India, Scandinavia, France, Italy, Germany, Australia, New Zealand, Netherlands, Cuba, Hungary and Finland. In the American section there were in 1909 96 lodges with about 2900 members. The most important event of the year for the members of the American Section was the visit of Mrs. Annie Besant, president of the Society, who made a tour of ten weeks. She visited many of the important cities of the country and delivered a large number of lectures. The general secretary and treasurer of the American Section is Weller Van Hook, 103 State Street, Chicago. Several other bodies in the United States use the same name but are not affiliated.

THOMAS, GEORGE C. An American capitalist, connoisseur and philanthropist, died April 21, 1909. He was born in Philadelphia in 1839. He began his business career as a clerk in the office of Jay Cooke, and later he became a member of the firm. In 1883 he resigned to become the head of Drexel and Co., a position which he retained until 1905, when he retired from ac-

tive business. Mr. Thomas was for many years an ardent collector of rare autographs and works of art. He owned manuscript letters signed by every signer of the Declaration of Independence. His collection of Franklin and Washington literature was considered the finest in the United States. Mr. Thomas was active in many philanthropic interests in Philadelphia.

THOMSEN, JULIUS. A Danish chemist, died February 13, 1900. He was born in 1826. He was best known in connection with studies in thermo-chemistry. He was awarded the Davy medal of the Royal Society in 1883. Prof. Thomsen shared with Berthelot the honor of having made the most serious investigation undertaken in thermo-chemistry. The results of his labors are contained in four volumes, entitled *Thermochemische Untersuchungen*, published in 1882-8. These contain records and results of researches that extend over all branches of chemistry, and form a digest of the science of thermo-chemistry.

THOMSON, WILLIAM JUDAH. An American rear-admiral (retired), died August 12, 1909. He was born in Washington, D. C., in 1841. He entered the United States service in 1865 as acting assistant paymaster. He was successively paymaster, pay inspector, and pay director, and was retired in 1903 as rear-admiral.

THYRESOL. This drug consists principally of the methyl ether of santalol, and has the chemical formula $C_{15}H_{20}OCH_3$. It is said to be prepared by the action of sodium methylate upon santal oil chloride. The substance occurs as a colorless liquid having an aromatic odor, almost insoluble in water, but easily soluble in alcohol and ether. Its uses are similar to those of the oil of sandal wood (specific inflammatory conditions of the genito-urinary tract) but it is said to be practically free from the irritant effects on the stomach and kidneys which characterize the latter drug.

TIBER BRIDGE. See BRIDGES.

TIBET. A Chinese dependency of Central Asia lying to the north of the Himalayas. Area, estimated at 463,200; population estimated at from three to six millions. Capital, Lhasa, with between 15,000 and 20,000 inhabitants. The country is the home of Buddhism. The Dalai Lama is the governmental head, assisted by a council consisting of a prime minister, five priests, and four laymen. There are two Ambans, or Chinese residents, at Lhasa, and Chinese troops are stationed at Lhasa, Shigatse, and Dingri. The three great monasteries outside Lhasa, however, actually govern the country through the Great Assembly (Tzongdu). The new trade marts have been opened (Gyangtse, Gartok, Yatung), and trade regulations signed (1908). The total trade in 1908-9 was about £305,000. The route is by way of Bengal through Sikkim, or through the Punjab and the United Provinces. The Chinese influence in administration tends to increase. The present Dalai Lama, T'ubstan, was born in 1876 and has reigned from birth. Chinese residents, Tchao Ehr-feng and Wen Tsong-yo. See EXPLOBATION.

TILFORD, WESLEY HUNT. An American capitalist, died March 2, 1909. He was born

in Lexington, Ky., in 1850. His early years were spent in the oil business of his brother and J. A. Bostwick in New York City, and on the dissolution of that business he formed a partnership with his brother. The firm soon entered into relations with the Standard Oil Co., with which it was eventually merged. Mr. Tilford organized, in 1878, the business of the Standard Oil Co. on the Pacific Coast, and in Colorado and other States. He was president of the California Oil Co., and he established the great Standard Oil Pacific carrying lines. Returning to New York he took charge of the transportation lines of the Standard Oil Co. He became a director of the Standard Oil Co. of New Jersey in 1892; its treasurer in 1899, and vice-president in 1908. Mr. Tilford was one of the most important witnesses in the dissolution suit of the United States against the Standard Oil Co. in 1907 and 1908.

TIMBY, THEODORE RUGGLES. An American inventor, died November 9, 1909. He was born in Dutchess county, N. Y., in 1819 and at the age of 16 years invented the floating dry dock. He later invented a turbine water wheel and a method of raising sunken vessels. His claim to the invention of the revolving turret, which was the most significant feature of the *Monitor* in her battle with the *Merrimac*, gave rise to a controversy which was never finally determined. He asserted that he had derived the idea for the revolving turret by seeing the old circular fort on Governor's Island in New York Harbor while crossing the ferry to New Jersey when he was 19 years of age. He made a simple drawing of a revolving battery and carried it to Washington. The commission appointed to consider the invention reported against it. Timby, however, filed a caveat in the patent office in 1843. Several years later another commission appointed to examine the invention reported against it. During the progress of the Civil War Timby claimed to have succeeded in enlisting important interests in the project of building a warship on the turret system at their own risk, and John Ericsson was to act as engineer. He received a royalty of \$5000 for the use of his patent turret used on the *Monitor* and two other vessels built by the company. This royalty was all that he ever received for his invention. The greater part of Timby's later life was spent in an attempt to have his claims as the inventor of the revolving turret on the *Monitor* acknowledged by Congress. His claims were supported by Rear-Admiral Daniel Ammen, Admiral Braine, and James G. Blaine, and others, but in this attempt he never succeeded. He continued his inventive work and patented in 1891 a system of sighting and firing coast defense guns.

TIMOR. An island of the Malay Archipelago, the largest of the Lesser Sunda group. Estimated area, 12,593 square miles; estimated population, 400,000. The western portion of the island belongs to the Netherlands, and the eastern (and larger) to Portugal. By convention of 1904, ratified in 1908, between the two governments, the boundary separating Dutch and Portuguese Timor was defined. Dutch Timor forms part of the Residency of Timor Archipelago, which is an Outpost of the Dutch East Indies and has an estimated area of 17,782 square miles and an estimated population of

308,600. Portuguese Timor has an estimated area of 7330 square miles and an estimated population of 200,000. The natives are pagans and are under immediate rule of their chiefs. The imports of Portuguese Timor, in 1907, amounted to 244,733 milreis, and the exports, 332,647 milreis. The principal exports were: Coffee, 202,621 milreis; sandal-wood, 38,823; wax, 19,499; sandal-root, 10,993. Estimated revenue for the year 1908-9, 132,472 milreis, including a contribution of 32,400 milreis from Macao (to which, prior to 1896, it was administratively attached); estimated expenditure, 221,291 milreis. Dilli is the port and capital.

TIN. The only tin ore produced in the United States during the year 1908 was a few tons of stream tin, sluiced from gravels in Seward Peninsula, Alaska. There was no production in the United States in 1909. The total production of tin in 1908, according to the figures of the United States Geological Survey, was 116,648 short tons. Of this the greater portion came from Straits Settlements. The total production from this source was 67,760 short tons. Bolivia followed with 19,040 tons. During 1908 the United States imported for consumption 41,267 short tons of pig tin, valued at \$23,923,560, an average of 28.986 cents per pound. The average price for the year was 29.42 cents.

According to the figures given by the *Engineering and Mining Journal* the tin production of 1909 amounted to 105,984 tons. Of this 59,870 tons came from the Straits Settlements, 16,500 from Bolivia. The table given below, from this authority, indicates the tin production of the world in 1908-9. It will be seen that the figures for 1908 differ somewhat from those of the United States Geological Survey given above.

TIN PRODUCTION OF THE WORLD

	1908	1909
Straits	62,392	59,870
Banka and Billiton	13,785	15,014
Australia	6,119	5,800
Bolivia	16,250	16,500
Chinese exports	4,000	3,500
Cornwall (England)	4,400	4,800
Miscellaneous	250	500
Total	107,196	105,984

The figures of tin consumption of the world, also from the *Engineering and Mining Journal*, are indicated in the following table:

TIN CONSUMPTION

	1908	1909
United States	31,700	39,550
Great Britain	29,400	29,334
Other European countries.....	28,050	30,068
India and China, from the Straits	3,265	3,400
Other countries	4,250	4,350
Australian consumption, etc...	500	600
Total	97,165	107,202

Imports of tin into the United States for the eleven months ended November 30, were 89,217,882 pounds, and it was estimated that the imports for the full year would be close to 100,000,000 pounds. Nearly 90 per cent. of the imports are Straits tin.

The tin market, which was unfavorable at the

beginning of 1909, improved gradually throughout the year. The consumption in the United States assumed large proportions, and as shipments from the East did not increase correspondingly, it was necessary to draw from the existing stocks. The table given below, from the *Engineering and Mining Journal*, indicates the price of tin in New York for 1908-9 by months.

TIN AT NEW YORK

Month	1908	1909
January	27,380	28,060
February	28,978	28,290
March	30,577	28,727
April	31,702	29,445
May	30,015	29,225
June	28,024	29,322
July	29,207	29,125
August	29,942	29,966
September	28,815	30,293
October	29,444	30,475
November	30,348	30,859
December	29,154	32,913
Average for year	29,465	29,725

Prices are in cents per pound.

TOBACCO. The crop in the United States in 1909 was the largest ever raised, amounting to 949,357,000 pounds. This is 230,000,000 pounds more than the crop of 1908, and one-third more than the five-year average. The area planted in 1909, 1,180,000 acres, was an increase of 26 per cent. over the previous year. This increased acreage was mainly in the North Central and South Central States. The acreage in the Burley district was the largest ever planted, the increase being attributed to the very short production in 1908. The farm value of the tobacco crop is estimated at \$95,719,000, a figure never before equaled, and nearly 50 per cent. above the five-year average. The Commissioner of Internal Revenue reports that during the fiscal year 1909 the United States government collected revenue on tobacco amounting to \$51,887,178.04.

The new United States tariff permits the importation, duty free, from the Philippine Islands of 300,000 pounds of wrapper tobacco, 1,000,000 pounds of filler tobacco, and 150,000,000 cigars. To assist the Philippine tobacco growers in establishing a high standard for their product, the insular government has provided for a careful inspection and grading of all tobacco shipped from the islands to the United States, and will allow only the best grades to be exported. This is to avoid the injury to the market which would result from the shipment of inferior grades of leaf and manufactured tobacco, which would discredit the Philippine product.

Tobacco is the second export crop of Porto Rico in value. The export of leaf tobacco, although it shows a great increase from year to year, does not keep pace with the increase in the export of cigars, probably owing to the abundance of skilled labor for manufacturing tobacco products. There has been a steady increase in the growing of cigar leaf tobacco, and also an improvement in quality. The growth of wrapper tobacco under cheese cloth is in the hands of large companies, while the filler tobaccos are produced, not only by the companies, but by a great many small planters, who sell their product either cured or as cut from the field.

The production of leaf tobacco in the Dominion of Canada in 1908 amounted to 11,266,732 pounds. Considerable opposition has been presented to the proposition of the French government to increase the retail price of tobacco manufactured by it as a government monopoly. According to a consular report, foreign tobaccos retail in France at prices from two to five times as high as at home.

TOGOLAND. A German African protectorate, lying between the Gold Coast and Dahomey. Area, 33,700 square miles; population, about 1,000,000. Capital, Lome; chief native town, Togo, with 8000 inhabitants. Imports (1907), 6,700,000 marks; exports (chiefly corn, rubber, palm kernels, palm oil and ivory), 5,916,000. A railway connects Lome with Little Popo, with a branch from Lome to Palime. Estimated revenue and expenditures for 1909-10 balanced at 6,599,490 marks (including loan of 4,265,000 marks). Little Popo and Porto Seguro are included with Togoland under the administration of a governor (1909, Count von Zech-Neuhofen), who is aided by a government council.

TONGA ISLANDS, OR FRIENDLY ISLANDS. A British protectorate in the South Pacific. Area, 390 square miles; population (1905), 21,103 natives of Tonga, 300 other natives, 151 British subjects, 89 other Europeans, and 120 half-castes. Nukualofa is the capital of King Jioaji Tubou II. The soil is fertile. Imports (1908), £98,166; exports (copra, green fruit, kava, etc.), £133,272. Total shipping, (1908), 136,847 tons (British, 132,098). Revenue (1908), £33,592; expenditure, £42,142. British agent and consul (1909), W. Telfer Campbell.

TONGKING. A French protectorate in French Indo-China (q. v.). Area, 46,223 square miles. Population, (1906) 5,896,510. The capital, Hanof, (population, 103,238), an agglomeration of small villages, is also the capital of French Indo-China. The people are mainly of the same race and religion as those of Annam. There are about 400,000 Roman Catholics. There are 38 schools, besides a school of medicine for natives of Hanof. The delta regions are fertile. The chief crop is rice, mainly exported to Hongkong; other products are sugar-cane, silk, cardamoms, coffee, cotton, fruits and tobacco. About 500,000 kilos of raw silk are produced annually. There is a cotton mill, with 16,000 spindles and 600 employees, at Haiphong, and one with 10,000 spindles at Hanof. Coal is mined at Hongay on the coast. The imports and exports are included in those of French Indo-China. In 1906 209 vessels of 151,940 tons entered, and 249 of 255,486 tons cleared at Haiphong. The King of Annam was formerly represented in Tongking by a viceroy, but in July, 1897, he consented to the substitution of a French residency in place of the viceroyalty. The present Resident-Superior is M. Morel.

TOTH, ALEXIS G. An ecclesiastic of the Orthodox Greek Church in the United States, died May 7. He was born in Hungary and educated in Russia. For a time he held a high government position in that country, but resigned to take holy orders. He came to the United States and for many years had a large congregation at Wilkes-Barre, Pa. He was a close friend of Czar Nicholas II., who presented him with a valuable ecclesiastical crown.

He was chief ecclesiastic of the Orthodox Church in the United States after Archbishop Tichon.

TRADE UNIONS. The vast majority of trade-unionists in the United States and Canada are affiliated with the American Federation of Labor (q. v.). In 1909 that organization included 118 national and international unions, representing about 27,000 local unions, 38 State branches, 594 city central unions and 573 local unions. These unions publish about 245 weekly or monthly papers. This Federation with its more than 1,600,000 members or two-thirds of all trade-unionists in the two countries, and its 1000 organizers, represents the trade union movement in North America. Among the larger unions affiliated with the Federation are the United Mine Workers of America, with 252,500 members in 1908; the United Brotherhood of Carpenters and Joiners of America, with 180,000 members; the International Association of Machinists, 62,100; the Brotherhood of Painters, Decorators and Paperhangers of America, 64,800; the Retail Clerks' International Protective Association, 50,000; the United Garment Workers of America, 43,900; International Typographical Union, 44,000; the Cigarmakers' International Union, 41,000; the United Brewery Workers, 40,000; and the International Brotherhood of Teamsters, 37,700.

All unions affiliated in the Federation in 1908 paid in benefits a total of \$2,144,395, an increase of \$200,000 over the previous year. Of this sum about 60 per cent. went for death claims, about 28 per cent. for sick benefits, 10 per cent. for unemployment benefits, and the remainder for traveling benefits and tool insurance. The unemployment benefits were larger than ever before. Of the total benefits the Cigarmakers' International Union paid 23 per cent.; the Iron Molders' Union, 15 per cent.; and the United Brotherhood of Carpenters and Joiners, 12 per cent.

The principal unions not affiliated with the above are the brotherhoods of Locomotive Engineers, Locomotive Firemen, and Railroad Trainmen, the Bricklayers' and Masons' Unions, the Stone Masons' International Union, and the Western Federation of Miners.

GREAT BRITAIN. During the past three years trade unions in Great Britain have been passing through a period of rapid growth. The number of separate unions in 1909 was approximately 1200, with an aggregate membership of 2,406,746, an increase of almost one-half million in three years. The greatest percentage increase was in the textile trades, due to the organization of the female operatives. Women and girls now constitute about one-twelfth of the entire trade-union membership, about 85 per cent. of them being in textiles, 70 per cent. in the cotton industry alone. There have been considerable increases in the number of union workmen among those engaged in railroading, in mining, in metal working, in the engineering, clothing and printing trades, and in shipbuilding. The British unions are steadily increasing the use of arbitration and conciliation in the settlement of trade disputes. The resulting relative infrequency of strikes and lockouts has enhanced the financial strength of the unions. The financial reserve of the 100 principal unions, including more than 60 per cent. of all union members, amounted to \$28,000,000, or about \$20 per member, as compared with \$12 per

member ten years ago. These unions have unions have instituted a system of voluntary contributions for the support of their Parliamentary representatives. At the same time the Labor party has declared its intention of introducing a bill legalizing compulsory levies for such purpose.

The meeting of the out-of-work or unemployed benefits is becoming a serious financial problem. They reached the maximum of \$3,270,000 in 1904. These payments have averaged 23 per cent. of trade-union expenditures during the past ten years, while previously they never rose as high as 20 per cent. of the total, even in the worst years. There has resulted an active movement for the granting of state subsidies to unions paying unemployment benefits, the Trade Union Congress being about equally divided on the proposition. See UNEMPLOYMENT.

The General Federation of Trade Unions held its 10th annual conference at Blackpool in July. It includes 131 affiliated societies with 693,998 members. The main object of this body is to increase the fighting and bargaining strength of constituent unions. To this end it pays benefits into the treasury of any such union engaged in a strike or lockout. Thus the strike of the cotton mill operatives late in 1908 cost the Federation \$600,000. During the year ending March 1, 1909, it dealt with 638 disputes involving 55,000 workers.

The Trade Union Congress was held for one week in September at Ipswich. There were represented 195 unions with 1,701,000 members; the delegates numbered 495, including 33 members of the House of Commons, 195 members from the Miners' Federation and 49 union weavers, four of whom were women. The resolutions of this Congress furnish instructions to its Parliamentary Committee in the House of Commons. A resolution for "a citizen army free from military law in times of peace" was rejected; so also a resolution to establish a labor daily in London at a cost of \$750,000. Among those adopted were those condemning the marketing of prison-made goods; calling upon the government to appoint a Minister of Labor; demanding the prohibition of the export of "black-legs" or strike-breakers to other countries during trade disputes abroad; approving the government's schemes for labor exchanges and insurance against unemployment, but disapproving government subsidies to trade unions granting unemployed benefits; requesting the reduction of the age-limit for old-age pensions to 60 years and the abolition of existing disqualifications; favoring woman suffrage; and requesting an investigation of industrial insurance against accidents, sickness and invalidity; and approving the proposed budget. Compulsory arbitration was rejected. At the same time and place the Women's Trade-Union League, claiming 200,000 members, held sessions. On December 5 the Parliamentary Committee of the Trade Union Congress issued a manifesto declaring intense hostility to the House of Lords and demanding its abolition.

The judicial decision rendered in December, 1908, in the case of Osborne *vs.* the Amalgamated Society of Railway Servants, declaring that a trade union is not competent to maintain representatives in Parliament by means of compulsory levies on its members, and considered by trade unions the most important since the famous Taff-Vale decision, was upheld by the House of Lords on December 21, 1909. The

unions have instituted a system of voluntary contributions for the support of their Parliamentary representatives. At the same time the Labor party has declared its intention of introducing a bill legalizing compulsory levies for such purpose.

The Labor party, made up largely of trade unionists, in January declared for the socialization of means of production, the abolition of the half-time system (see CHILD LABOR), raising the school age to 16, and secular education. The convention of the Amalgamated Society of Railway Servants in October declared for the State ownership of railways and at the same time the Miners' Federation declared for the State ownership of mines. These resolutions indicate the strongly socialistic tendencies of the trade-union movement in Great Britain.

FRANCE. During the last few years the number of trade-union members has increased very rapidly, the number in 1909 being approximately one million, exclusive of the associations of government employees, as compared with 533,000 in 1900. The striking feature of trade-union activity in 1909 was its extreme aggressiveness, due mainly to the dominance of radical leaders. The central position was held by the General Confederation of Labor, which has come under the control of an extreme socialistic element, not believed to be really representative of the temper of the affiliated unions. This body, at its 1906 convention, solemnly prohibited the introduction of political activity into its policies, but nevertheless the chief aim of its officers in 1909 was to harass the government. They led in the organization of the public postal, telegraph and telephone employees into a "syndicate" under the associations law for the purpose of securing the right to strike. This was done in spite of express prohibition by the government. Two strikes of these employees, and an attempt at a general strike, followed. The government partially compromised by authorizing the formation of associations, but not trade unions with strike privileges by public civil servants in any department, but prohibited the formation of a federation of employees of several departments. Nevertheless, about December 1, over 181,000 civil employees decided to form a national federation. Many journals insisted that the government ought to repress this movement as a defiance of the state's sovereignty. Meanwhile M. Niel, the general secretary of the General Confederation, had been forced out because of his moderation during the strikes earlier in the year. This left that body fully under the control of revolutionary leaders, who are pledged to the general strike, the abolition of the employing class and the wages-system, and opposition to militarism and patriotism. The Confederation causes agitation all out of proportion to the industrial importance of its membership. Only a small proportion of French workers are in the unions, extreme radicalism keeps many workmen out, and consequently the Confederation is probably powerless to enforce its revolutionary policies. See STRIKES AND LOCKOUTS, and FRANCE.

The 6th International Conference of the Secretaries of Trade Union Centres, otherwise the International Secretarial, was held at Paris, August 30-31 and September 1. The date and place had been changed from Stockholm, 1910,

on account of the visit of Samuel Gompers to Europe during the summer of 1909. Since the American Federation of Labor was not affiliated with the conference, he was given a voice but not a vote. At this conference the one great principle upon which all agreed was the opposition of the laboring classes to war. The European trade unions are systematically developing this sentiment, on the ground that laboring men form the bulk of the soldiery in actual warfare, and pay off the immense national debts caused by war. The strong socialist leanings of many European trade unions is shown by the fact that a number of delegates, including those from Belgium, Holland and Austria, were avowed socialists and spoke at length upon the socialist propaganda, even condemning trade unionism. The next conference will be held at Budapest in August, 1911. See LABOR, AMERICAN FEDERATION OF.

GERMANY. The 20th International Congress of Miners opened in Berlin on May 31. Delegates were present from Germany, Great Britain, France, Austria, Poland and Belgium. For an account of its decisions, see GERMANY, paragraphs on *History*. From latest available official sources the *Bulletin* of the New York State Labor Department for September, 1909, finds that the centralized or Social Democratic unions in Germany in 1908 embraced 60 national unions with 1,831,731 members, of whom 138,443 were women. The total receipts of these unions for the year were about \$12,130,000 and the total expenditures, \$10,500,000. The expenditures were almost 14 per cent greater than in 1906. They included \$1,175,000 for strike benefits; \$2,000,000 for the unemployed; and \$2,125,000 for sickness. The largest unions and their membership in 1908 were: metal workers, 360,099; masons, 175,019; wood workers, 146,337; factory operatives, 136,195; textile workers, 116,403; miners, affiliated with the centralized body, 112,192, and affiliated with the Christian unions, 75,256; transport workers, 88,096. The Christian trade unions, promoted by the Catholic Church, included about 360,000 members, mostly in the Rhenish districts. The Hirsch-Dunker unions embraced about 110,000 members, most of them in Silesia and east Germany. The total trade union strength in Germany in 1908 was 2,382,401. On some propositions all of the three main bodies stand together.

OTHER COUNTRIES. The membership of trade unions in other countries as given by the *Bulletin* already referred to was as follows: Austria, 482,274, a decline as compared with 1907; Russia (1907), 246,272; Sweden (1907), 186,226 (but see STRIKES AND LOCKOUTS); Belgium (1907), 181,015; Australia (1907), 130,320; Hungary (1907), 130,192; Switzerland, 129,319; Denmark (1907), 90,806; Netherlands, 57,971; and Norway (1907), 39,070. See INDUSTRIAL ARBITRATION AND CONCILIATION; WOMEN IN INDUSTRY; LABOR, AMERICAN FEDERATION OF; BOYCOTT; INJUNCTION; and STRIKES AND LOCKOUTS.

TRANSMISSION OF ELECTRIC POWER.

The maximum voltage employed in the transmission of electric power in 1909 remained at 110,000 as established in 1908. The operating experiences at this voltage fully confirmed its practicability in connection with link suspension insulators and aluminum electrolytic lightning arresters. The economic importance of

this success can scarcely be estimated, as it points the way to the development of immense water power resources hitherto unutilized because of the remoteness of a market for the power. Confidence in the conquest of a still higher realm of electrical pressures was strengthened by the performance of a 500,000-volt experimental line at Norkopping, Sweden. These experiments indicated that the limiting voltage will be determined by the intense electrostatic field rather than by insulation difficulties.

Work was begun during 1909 in a 110,000-volt transmission line to be 300 miles in length. This line will be operated by the Hydro-Electric Commission of Ontario and is to extend from Niagara to Hamilton, Toronto, London and St. Thomas. The line is to be supported on 3200 steel towers spaced at 550 feet. Provision will be made for the transmission of 30,000 kilowatts.

The plant of the Southern Power Company at Rocky Creek, S. C., on the Wateree River, was completed and placed in operation; 24,000 kilowatts are developed at this point, the transmission voltage being 100,000. An additional plant of 18,000 kilowatts has been begun at Blacksburg and is to be completed in 1910, raising the total capacity of the system to 72,600 kilowatts. This system is the largest in the South and supplies its power largely for the driving of cotton mills. The year was an important one in the development of the water power of California. The Big Bend plant of the Great Western Hydro-Electric Company, supplying a load of 60,000 horse power, forms the first step in the work of developing 500,000 horse power, which is to be completed in the next ten years and is to form the greatest system of its kind in existence. Other important projects which were undertaken were the construction of a 30,000-horse power plant on the Rubicon, a 75,000-horse power plant on the American River and a system of plants in the Lake Tahoe district which is to aggregate 200,000 horse power. The total magnitude of the investment required for the plants now being worked out will exceed \$50,000,000.

The success of the synthetic nitrate industry in Norway has greatly stimulated hydro-electric development and power transmission in that country. At Rjukan a plant of 250,000 horse power, which is to utilize a 930-foot head in two stages, is under construction. The falls of Matre and Tyn are also being developed to the extent of 200,000 horse power. Numerous transmission projects of great magnitude were undertaken in France, Switzerland, Italy, Spain and Austria. Plans for the development of 270,000 horse power at the Victoria Falls of the Zambezi River and its transmission to South Africa at 150,000 volts have been matured.

Important progress was made in the design of the auxiliary apparatus on which the reliability of high voltage systems depends. Satisfactory aluminum cell lightning arresters for 110,000-volt lines were produced. A condenser type of insulating bushing consisting of graded layers of paper and metal foil was found very effective in producing a uniform distribution of electrostatic stress in the terminals of transformers and oil switches. Effective switches and circuit breakers were produced for 110,000-volt circuits by the use of condenser terminals.

Taken as a whole, the experiences of the year have led engineers to feel an increased sense of security in the matter of lightning protection and have strengthened their confidence in the practicability of line voltages much higher than those now in use.

TRANSVAAL. A British colony in South Africa, lying between the Orange River Colony on the south and Rhodesia on the north. Capital, Pretoria.

AREA, POPULATION, ETC. The area is 111,198 square miles. The census of 1904 showed a population of 1,268,716, including 945,498 aborigines, 23,891 other colored, and 299,327 whites. Pretoria had 36,700 inhabitants (21,161 white) in 1904, and Johannesburg, the centre of the Witwatersrand gold fields, 158,580 (83,902 white). On June 30, 1908, there were 624 schools, with an enrollment of 44,451 and an average attendance of 38,433. Pupils in secondary schools numbered 1891. The Normal College had 94 students. English is being gradually introduced into schools where the children are Dutch. The leading religious denomination is the Dutch Reformed, followed in order by the Anglican, Methodist and Presbyterian.

PRODUCTION. Only a small proportion of the land is under cultivation, and agriculture is less important than stock raising. The principal crop is corn. The live-stock, according to the 1904 census, included 52,168 horses, 546,829 cattle, 844,214 sheep, and 157,888 swine. Mining constitutes the chief source of wealth, the chief minerals being gold, diamonds, and coal; others of some importance are tin, silver, copper, and lead. The quantity and value of the chief mineral products are reported for 1907 and 1908 as follows:

		1907
Minerals	Quantity	Value
Gold, oz.	6,450,740	£27,400,992
Diamonds, carats	2,062,855	2,268,075
Coal, short tons	2,883,423	773,649
		1908
Gold, oz.	7,056,266	£29,973,115
Diamonds, carats	2,022,687	1,549,815
Coal, short tons	3,012,692	794,949

About the beginning of 1909 there were employed in the gold mines 192,206 persons (180,828 on the Witwatersrand); of the total, 160,504 were colored, 19,460 white, and 12,192 Chinese. Gold-mining prospects were excellent in 1909. During the preceding year the reported profits earned by the producing companies equaled a distribution of 8.79 per cent. on the market value of the shares. The recent development in many deep mines is most encouraging, as the temperature is found to increase only one degree Fahrenheit to every 225 feet in depth. The number of persons employed in other than gold mines, about the beginning of 1909, was as follows: Diamond mines, 806 white and 7955 colored; coal mines, 420 white and 8889 colored; all other mines, 400 white and 3585 colored. There are iron and brass foundries, brick and tile works, tobacco factories, grist mills, breweries, etc.

COMMERCE AND COMMUNICATIONS. The Transvaal is included in the South African Customs Union. Imports and exports, including bullion, have been valued as follows:

	1906	1907	1908
Imports.....	£217,699,234	£15,758,944	£16,196,692
Exports.....	27,206,453	31,268,276	33,323,590

In 1907 the principal imports were: Apparel and haberdashery, £1,223,155; machinery, £1,050,032; chemicals and dynamite, £1,088,213; live animals, £1,097,260; meat, £739,834. The chief exports in 1907 were: Gold, £27,364,717; diamonds, £1,972,084; wool, £225,225; horses and mules, £156,544; skins, hides, and horns, £122,096. Imports to the value of £5,526,755 came from Great Britain.

Reports of the Transvaal railways include the lines in the Orange River Colony; the entire mileage, which is almost all state-owned, amounted to 2628 miles at the end of 1908, when 64 miles were under construction. On June 30, 1908, there were 9769 miles of telegraph wire, 26,597 miles of telephone wire, 267 telegraph offices, and 450 post-offices.

FINANCE AND GOVERNMENT. In the year ending June 30, 1907, the revenue and expenditure were £4,651,532 and £4,415,476, respectively: in 1907-8, £4,670,218 and £4,118,848, respectively. For 1908-9 the estimated revenue was £4,682,062 (£1,440,000 customs and excise, and £1,039,000 mining dues, etc.), and the estimated expenditure £4,840,962. The outstanding debt on June 30, 1908, was £28,550,000. For 1909-10 the estimates were: Revenue, £5,251,000; expenditure, £4,963,000.

On December 6, 1908, responsible government was established, with a governor, assisted by a ministry, and a legislature, consisting of the Legislative Council (15 members) and the Legislative Assembly (69 members, elected by universal white suffrage). The Governor (also the High Commissioner for South Africa) in 1909 was the Earl of Selborne; the Premier, General Louis Botha. The Transvaal is a member of the Union of South Africa.

HISTORY. The discrimination against the Asiatics of British birth under the old régime, which was one of the issues of the South African war, had been resumed by the new colonial government, whose rigorous measures in 1908, resulting in numerous arrests and deportations of resident Indians, provoked much criticism. The arrests and deportations continued in 1909. Early in the year twenty Indians were sentenced to three months' hard labor for failure to produce the required certificates, under the Asiatics' Registration act. At the beginning of March 111 Asiatics were in prison for violations of this and the Immigration act. Mr. Gandhi, the leader of the Indians, who had been imprisoned, was released on May 24. He declared that he would continue the agitation for the rights of his compatriots. In June three Indian members of a mission about to go to England to lay their grievances before the home government were arrested and sentenced to three months' hard labor. Among the many Indians undergoing punishment were men of culture and social prominence. The objection was not to the principle of restricting Indian immigration but to certain regulations imposing what were regarded as indignities, especially the rule requiring the taking out of periodically renewable licenses. During the year meetings were held in India to express sympathy with them and to protest against their treatment.

The policy of excluding Chinese labor, one of the features of the programme with which the Liberal party in Great Britain came into power in January, 1906, was nearly completed in 1909. At the annual meeting of the Native Labor Association it was announced that the Chinese had decreased by 23,393, while the native laborers had increased by 47,766. On November 30 there were only 3197 Chinese left in the Transvaal, and in the British House of Commons the Colonial Under-Secretary announced January 1, 1910, as the date for the departure of the last Chinaman. A convention was signed with the Portuguese government relating to trade with Mozambique and the recruiting of labor in that colony. The natives of Mozambique have been the main source of the labor supply for the Transvaal mines. By this convention the Portuguese government agreed to facilitate the recruiting of labor for the Transvaal. The latter provided for the repatriation of the natives at the expiry of the contract and engaged to take measures to prevent natives who left families in Mozambique from permanently settling in the Transvaal. Free trade was established between the two provinces in their own products. The agreement was to last ten years. Upon the completion of the South African Union the responsibilities of this convention were to devolve upon the new central government. The recruiting of 3000 laborers in British Central Africa for the Transvaal was allowed by the imperial government in June.

Parliament opened on June 1. The High Commissioner, the Earl of Selborne, announced measures for the restriction of betting and the publication of betting news, dealing with money-lending and lotteries, and providing for proportional representation in the municipalities. On June 2 the South African Constitution bill was passed (see SOUTH AFRICA, BRITISH). The betting law and the other measures announced by the government were subsequently enacted with some amendments. The Transvaal members of the delegation sent to London to submit the Draft of Union started on June 28. Mr. Villieu was acting Premier in the absence of the Premier.

TRASK, SPENCER. An American banker and philanthropist, died December 31, 1909. He was born in Brooklyn, N. Y., in 1844, and was educated at the Polytechnic Institute in Brooklyn and at Princeton College, graduating from the latter institution in 1866. He engaged in the banking business and became associated with Henry G. Marquand, succeeding to Mr. Marquand's business when the latter retired. He remained at the head of this banking house until his death. Mr. Trask early became associated with Mr. Thomas A. Edison in electrical development, and he served as president of the New York Edison Company for more than twenty years. He was well known as a patron of art and was a member of the Municipal Art Society of New York, and one of the founders of the National Arts Club. He was also one of the founders and president of the Board of Trustees of Teachers College, New York City, for fifteen years, and was actively interested in other educational institutions. His philanthropies included the establishment at Saratoga of St. Christina's Home, an undenominational institution for the care of children and the education of girls. Mr. Trask was

killed in a railroad collision on the New York Central Railroad.

TRINGGANU. A British possession on the eastern side of the Malay Peninsula, north of Pahang (Federated Malay States). This territory was formerly under the suzerainty of Siam, which ceded its rights therein to Great Britain by a treaty concluded at Bangkok March 10, 1909. (See SIAM.) The estimated area is stated at about 4500 square miles, and estimated population, about 115,000. The capital is Tringganu, at the mouth of the river of the same name. The industries are similar to those of Kelantan (which was also ceded to Great Britain by the treaty above mentioned), but Tringganu is less developed both industrially and administratively.

TRINIDAD AND TOBAGO. Two islands of the West Indies which together form a British colony. Area of Trinidad, 1754 square miles; of Tobago, 114. Population of Trinidad (1906) 306,830, estimated 1909, 325,194; of Tobago (1906) 20,570, estimated 1909, 18,751. Port of Spain (population 60,000), the capital, has one of the finest harbors in the West Indies. Other important towns of Trinidad are San Fernando (7610 inhabitants), Princetown (4497); of Tobago, Scarborough (1370) and Plymouth. The imports in 1908-9 were valued at £2,682,702; the exports at £2,500,195. The principal articles of export were sugar, 39,618 tons; rum, 68,723 gallons; molasses, 358,936 gallons; bitters, 27,194 gallons; cacao, 49,137,088 pounds; asphalt (from the 110-acre asphalt lake near La Brea), 133,208 tons (£151,026). There are 89 miles of railway open, and the island of Trinidad is crossed by the West India and Panama Telegraph Company's lines and by government telegraph and private telephone lines. Revenue (1908-9), £834,745; expenditure, £855,050. The public debt stood at the end of the fiscal year 1909 at £1,068,793. The Governor (1909, Sir G. R. Le Hunte) is aided by executive and legislative councils.

TRINITY COLLEGE. An institution of higher learning at Hartford, Conn., founded in 1823. The attendance in 1909 comprised 203 students, with 21 members of the faculty. The number of books in the library was 58,000 bound volumes and 36,000 pamphlets. The gifts received during the year amounted to about \$150,000. Among the changes in the faculty during the year was the appointment of Walter B. Briggs in place of W. N. Carlton, librarian, and John G. Gill in place of R. J. Ham, professor of romance languages. An additional endowment of \$500,000 was nearly completed at the close of the year. The total productive funds of the college amount to about \$1,225,000. The president is F. S. Luther, LL. D.

TROPICAL MEDICINE. Since the American occupation of the Philippines, these islands have provided a fertile field for the study of tropical diseases, and great advances in the investigation and control of these diseases have been made by the army medical organization. Dr. R. P. Strong, of the Biological Laboratory in Manila, reviews some of the work done by the Bureau of Science in certain diseases prevalent in this region. An extensive research was carried on in the laboratories into the subject of so-called tropical dysentery, which caused

more deaths among the American soldiers than any other single disease. It was found that tropical dysentery really included three distinct diseases, and that these required widely different forms of treatment. One form, amœbic dysentery, was discovered to be due to a species of protozoa, an amœba; a second, bacillary dysentery, was due to a species of bacteria known as *Bacillus dysenteriae*; and a third, catarrhal dysentery, due to the action of one of several bacteria, which produced a catarrhal condition of the large intestine. It was moreover demonstrated that these three forms of dysentery could be readily diagnosed by laboratory examinations of the dejecta. These discoveries soon placed the treatment of the disease upon an intelligent basis. The most effective treatment for the amœbic dysentery was found to consist in attacking the parasite by local applications—enemas. Bacillary dysentery was best controlled by the inoculation of anti-dysenteric serum. It was further demonstrated that the amœbic and bacillary dysenteries were usually acquired through infected drinking water, as was the catarrhal form in some instances. As the result of these discoveries, both the mortality and the amount of dysentery among Americans and Europeans were rapidly reduced. Bacillary dysentery is now very rare and amœbic dysentery is becoming less frequent. Control of this disease was obtained by educating the population to the necessity of avoiding infected drinking water and of employing only boiled or distilled water for drinking purposes.

At present there is no bubonic plague in the Philippine Islands, no case having occurred for over a year. The disease first appeared in 1900 in Manila, and only by vigorous measures was it prevented from gaining a foothold such as it had in India. The means adopted for repelling the plague were the fumigation of all vessels arriving from infected ports, and the destruction of all rats in them; rigid isolation of patients sick with the disease; wholesale extermination of land rats and their fleas; the burning, where practicable, of houses or districts where plague had occurred; and, most important of all, the immunization of people living in badly infected districts by inoculations with anti-plague serum. The latter measure succeeded beyond expectation.

Cholera, although banished on several occasions since 1902, has reappeared in the Philippine Islands, and has probably become, for the present, at least, endemic. The disease is spread partly through the water supply, but chiefly through infected uncooked foods. Flies were also shown to play a part in certain neighborhoods where unsterilized excreta of cholera patients were exposed. It was found that many individuals who had recovered from cholera carried about with them the germ of the disease in their intestines for several weeks after convalescence, and thus served as disseminators of the infection. An antitoxin was prepared in the government laboratories and was given an extensive trial in some of the smaller towns of the Philippines, with the result that in some districts the number of cases is only one-sixth as large as before inoculation was practiced.

In regard to malaria, it has been shown that nearly 50 per cent. of the native children in certain portions of the islands suffer from a latent form of this disease and furnish a constant source for the transmission of malaria

through the medium of mosquitoes. The amount of anæmia and general disability produced by malaria in the native population is enormous; in some districts over 50 per cent. of the adults show either latent or active infection. Among the white people, however, malaria is uncommon, particularly in large cities. An investigation was recently undertaken to determine the prevalence of animal parasites in the native population. The dejecta of 4106 prisoners were examined, and it was found that 84 per cent. were infected with one or more species of intestinal parasites; the most usual being the common whipworm (*Trichuris*), which was present in 59 per cent.; hookworms (*Ancylostoma*) were present in 52 per cent.; 23 per cent. of the prisoners were infected with amœbas, and 26 per cent. with round worms (*Ascarides*). Numerous other parasites were found in a small percentage of cases. It was noted that if these percentages of infection obtained throughout the total native population, it would appear that no less than 5,000,000 of the inhabitants of the Philippine Islands harbored intestinal worms, and it becomes a great question as to what bearing these infections have in regard to the public health. While there is practically no evidence to show that moderate infections with whipworms and round worms exercise a deleterious effect on the health of the individual, infections with hookworms and amœbas must be looked upon as more serious, since both of these parasites are pathogenic.

Smallpox has been thoroughly stamped out, no death having been reported during the past year. Before the American occupation, in some provinces there were as many as 6000 cases a year. Over 3,515,000 people have been vaccinated in the Philippines, without one death on account of vaccination, or any case of severe infection.

The Philippine Medical School for the education of physicians in tropical diseases started in 1907 with 54 students. The course extends over five years, and it is hoped in time to provide through this school thoroughly qualified physicians to take care of the millions of people in the Philippine archipelago. At present there is on an average one physician to 21,000 of the population, or one to every 430 square miles of territory.

TRUSTS. The development of opinion favorable to alteration of the national anti-trust laws continued during 1909, though not with the prominence and volume of the preceding campaign year. In Congress, during the first two months of the year, various proposals for eliminating the defects of the existing law, securing greater publicity of corporate activities by national incorporation and inspection, guaranteeing labor unions the right to form, to combine, and to strike, and distinguishing reasonable from unreasonable restraints of trade were advanced, but none was adopted. At the special session of Congress a law taxing corporations one per cent. on their net earnings was passed. While this was not a trust measure, its necessary effect will be to introduce a greater degree of governmental inspection into the affairs of all corporations, trusts included. At the close of the year several suits testing the constitutionality of this measure were pending before the Supreme Court, it being claimed that the power of Congress to regulate commerce among the States and with foreign na-

tions could not be stretched to include manufacturing. In this view, which was supported by citations from previous court decisions, commerce means transportation, and therefore does not include elaboration of materials known as manufacturing. Near the close of the year the administration expressed favor for the plan of national incorporation.

In May the Bureau of Corporations issued part of a report on the taxation of corporations in this country. The Bureau was carrying on investigations of the tobacco, lumber, and steel industries, the concentration of water-power ownership, and the International Harvester Company.

CONTINENTAL WALL PAPER COMPANY. The decision of the Supreme Court in the case of the Continental Wall Paper Company against the Louis Voight and Sons Company was handed down February 1. The latter, an Ohio corporation in the wholesale trade, refused to pay a debt of \$56,762 owing to the Continental Wall Paper Company for goods bought, on the ground that the Continental Company was an illegal combination under the Sherman law. Evidence, including copies of agreements between the Continental and other wall-paper concerns, were submitted, showing that a combination did exist and forced purchasers to pay monopoly prices. The Court, Justice Harlan writing, upheld the contention of the defendants as to the existence of the illegal combination, and proceeded to answer the question whether such a concern could use the courts in the collection of a debt. This question had been raised in the case of Conolly vs. Union Sewer Pipe Company, in which Conolly had refused to pay for goods bought on the ground that the pipe company was a party to an illegal combination. In that case the Court had refused to free Conolly from liability on the ground that there was no necessary legal connection between the sale of the pipe and the alleged agreement between the pipe company and other concerns. "The combination may have been illegal and yet the sales valid." In the wall-paper case, however, the majority opinion of the Court held that a different rule obtained, owing to the fact that the agreement under which the wall paper had been purchased by the defendant was an integral part of the conspiracy which made the plaintiff a monopoly and rendered the wholesaler helpless. Justice Holmes, in a dissenting opinion concurred in by Justices Brewer, White and Peckham, declared that "the policy of not furthering the purposes of the trust is less important than the policy of preventing people from getting other people's property for nothing when they purport to be buying it." The Court was thus in the dilemma of either lending its aid to a concern tainted with illegality, or enabling another concern to get something for nothing. The decision was considered highly important as affecting the standing of combinations before the courts.

AMERICAN TOBACCO COMPANY. The case against the American Tobacco Company, in which the government in 1908 secured from the Circuit Court of the Southern District of New York a decision adjudging the company guilty of conspiracy and enjoining its operations, was before the Supreme Court at the close of the year. On December 30, Attorney-General Wickersham filed a printed brief of

208 pages in which the history of the concern was traced, its violations specifically pointed out, and an extension of the injunction so as to include the foreign subsidiary companies asked for.

AMERICAN SUGAR REFINING COMPANY. The principal prosecutions of the year were those against the American Sugar Refining Company, known as the Sugar Trust. One of these was the suit brought by the Pennsylvania Sugar Refining Company for the recovery of \$30,000,000 damages for the closing of the latter's plants. The complaint was that Mr. Adolph Segal, who owned a controlling interest in the plaintiff company, had been induced through conspiracy on the part of officers and lawyers of the American Sugar Refining Company to accept a loan of \$1,250,000, on condition that the plaintiff's plants be not operated so long as the loan remained unpaid. In June, while the case was being tried, settlement was made out of court. While the exact amount paid to the plaintiff was not made public, it was reported to exceed \$2,000,000.

In July the Federal Grand Jury used this settlement as the basis of an indictment for fraud in violation of the criminal clause of the Sherman law. The persons indicted were: John E. Parsons, for many years counsel and director of the American Sugar Refining Company; W. B. Thomas, president; George H. Frazier, Charles H. Senif, and John Mayer, directors; Thomas B. Harned, counsel for Segal when the loan was made; and Gustave E. Kissel, agent for the company in making the loan. The last two of these defendants demurred to the indictment on the ground that the statute of limitations had run in their favor, more than five years having elapsed since the closing of the Pennsylvania refinery in January, 1904.

Judge Holt of the United States Circuit Court about November 1 upheld their claim. He declared a conspiracy in restraint of trade to be but a contract or agreement and the conspiracy in their case to have ended when the refinery was closed, this being the end sought by them. The government at once took an appeal to the Supreme Court on the ground that the Sherman act uses the term conspiracy advisedly to mean something different from the words contract and combination in the same section. The government claimed that a conspiracy does not end so long as the course of action begun by the conspiracy continues, and that therefore in this case it did not end until the refinery should be opened.

The second important group of cases against the Sugar Trust were those growing out of the frauds in the weighing of imported sugar at the docks in Brooklyn. Inquiry into these frauds began in 1907 when a man named Whalley came to the Treasury Department in Washington and stated that he had been employed from 1892 to 1902 as a company weight checker, and that after the enactment of the Dingley tariff in 1897 he had, under the direction of the company's dock superintendent, used methods of reducing the apparent weight of the unloaded sugar. He was set to inquiry whether similar frauds were still practiced. At the same time Richard Parr, assisted by James O. Brezinski, was sent as special agent to investigate. Whalley obtained employment from a ship owner at the un-

ing dock. In November he reported to Parr his observation that when a truck of sugar was moved on to the scales the company's checker dropped his left hand in a peculiar way. Parr was thus able on November 20, 1907, to detect a secret spring which, through a hole in the stanchion of the scales, could be pushed in by the checker so as to rest on the end of the lever connected with the beam of the scales. This spring could be easily withdrawn when the government's weigher, who sat at the checker's right, wished to adjust or balance the scales. Each of the seventeen scales had similar holes. The government then brought a number of suits for the recovery of duty evaded by the fraudulent weighing. These suits at first covered only six years, but were later extended back to 1898. In addition to the fraudulent springs the government offered uncontradicted testimony to show that there had been systematic efforts to bribe the Treasury officials responsible for the weighing of sugar. It was shown also that, although the company had twelve checkers, six were uniformly assigned for checking and that these six received a secret bonus above their regular pay. The first case based on these frauds was decided about the middle of March, 1909, the company being fined \$134,000 and being compelled to restore to the government more than \$1,000,000 of evaded duty. Other cases were settled voluntarily, the government receiving a total of \$2,269,897 from the company. These settlements did not preclude criminal suits nor further suits for back duties if cause should develop.

The government meanwhile had made preparations for criminal proceedings against those immediately responsible for the frauds, the hope being ultimately to convict some of the officials high in the councils of the concern. Mr. Oliver Spitzer, the company's dock superintendent, was tried for bribery, but acquitted, because Parr's assistant, Brezinski, contradicted on the witness stand his own evidence before the grand jury. In May, Spitzer and the six company checkers were indicted for the frauds. Before they were brought to trial, however, a blanket indictment was returned on November 4, under which Spitzer, four of the checkers and James F. Bendernagel, cashier of the company's Williamsburg refinery, were brought to trial on November 30. While the jury was unable to agree as to Bendernagel, it found all the others guilty, Spitzer being later sentenced to two years' imprisonment. The lawyers for the defendants in this case contended that their clients merely obeyed the orders of their superiors. Other indictments against Bendernagel were pending.

On December 21 another company checker named Halligan and Ernest W. Gerbracht, general superintendent of the Williamsburg refinery, were arraigned in the Circuit Court, charged with conspiracy in the sugar-weighing frauds. Other indictments were brought against directors of the company and against the government weighers. These latter were accused of accepting bribes. Moreover the development of the various cases brought to light considerable evidence tending to show that agents of the trust had bribed the sugar samplers, the result being that duty had been paid on lower grades of sugar than those actually imported. This was declared to be a

graver fraud than under-weighing. It was expected that these revelations would lead to Congressional investigation, though it was apparent that tremendous pressure would be exerted to prevent such a step. During the entire year the new president of the company carried out a programme of house-cleaning within the concern by dropping all the accused employees and many others who had served under the Havemeyer régime. On December 15 Mr. John E. Parsons, long chief counsel and a principal director for the trust, retired from it, this being deemed the most significant step thus far taken to introduce an entirely new control.

About the middle of September the National Sugar Refining Company, whose stock is in part owned by the trust, voluntarily paid to the government over \$600,000 as preliminary settlement for unpaid duties, and the Arbuckle Brothers paid \$695,573 in full of shortages of duty on sugar between 1898 and 1907. While the National Sugar Company's affair was a direct outgrowth of the trust frauds, that of Arbuckle Brothers was the result of a searching comparison of its own books with the custom house records, in which inquiry the firm co-operated. The firm's books showed the amounts of sugar bought from importers; the custom house records showed the amounts as reported by government weighers, the amounts on which duty was paid. A difference of about one per cent. was the basis of the supplementary payment.

AMERICAN ICE COMPANY. The trial of the American Ice Company for violation of the New York Anti-Monopoly act was begun in November before Justice Wheeler of the Criminal Branch of the State Supreme Court. It continued eight weeks. The evidence consisted largely of two truck loads of the company's contract books and the testimony of numerous dealers who had attempted to carry on an independent business. The suit established the fact that since the trust acquired power many dealers operating nominally as independents were employees of the trust. The methods of the trust in controlling the ice fields in Maine and along the Hudson and its effective methods of clubbing the independent retailers into submission were brought out. The defense first pleaded the statute of limitations, but was overruled; it then attempted to have the case thrown out on the ground that ice could not be monopolized; and finally openly defended the trust as carrying on a legitimate business by legitimate methods. The jury brought in a verdict of guilty and the court levied a fine of \$5000.

On December 17 the Appellate Division of the New York Supreme Court upheld the State's application for an injunction restraining the company from doing certain alleged illegal acts, from enforcing certain contracts and from preventing competition in the ice trade within the State. It also upheld the State's requests that the company be adjudged guilty of violating the stock corporation law and that its charter to do business in the State be revoked. This case was begun in July, 1908, and the decision here given was a complete reversal of that of the lower court.

OTHER DEVELOPMENTS. The interpretation of the so-called "commodities clause" of the Hepburn railway rate act, declaring the clause constitutional, but holding that it does not

prevent a railroad from carrying coal mined or owned by a company in which the railroad owns stock, was very favorable to the anthracite coal roads. See RAILWAYS.

The International Harvester Company, known as the Harvester Trust, following a \$60,000 fine by the Kansas Supreme Court, proposed that the court or a public utility commission assume control of prices for its products sold within the State. The proposal was accepted.

The Texas anti-trust law was made more stringent by raising the possible penalty for violation from \$50 to \$1500 per day and by increasing the maximum imprisonment from five to twelve years. The Arkansas anti-trust law was upheld by the Federal Supreme Court, in February, and the State at once began numerous suits under it. For the 80-cent gas decision, see GAS.

TSETSE FLY. See ENTOMOLOGY and SLEEPING SICKNESS.

TUBERCULIN. The great interest taken in the use of this agent for diagnostic purposes is indicated by the fact that several hundred articles on the subject appeared during 1909. When a minute dose of tuberculin is introduced into the human body by any of the ways described below, either a febrile or local reaction occurs if the subject is infected with tuberculosis. The tuberculin may be introduced by injection, by vaccination (von Pirquet's test) or by instillation into the eye (Calmette's reaction). In addition there have been introduced several modifications of these methods. Moro's test consists of rubbing into a small area of the skin about 5 grains of an ointment of tuberculin in lanolin or by gently rubbing into the skin a drop of tuberculin undiluted, the finger being protected by a rubber cot. The skin of the abdomen is generally selected. A positive reaction appears in from 12 to 24 hours and consists of a general redness of the area and the appearance of a few papules. This is a modification of von Pirquet's test and is said to be quite as satisfactory. General systematic reaction is not caused, and nausea, vomiting and muscular pains are absent. Another method was used by Lafite-Dupont and Molinier, who state that they obtained a specific reaction in 68 out of 73 tuberculous patients by applying directly to the mucous membrane of the nose for 10 minutes a small tampon saturated with 1 per cent. solution of tuberculin. This reaction consists of a localized exudation at the spot, preceded by more or less congestion. The exudate dries and leaves a small yellowish crust. The reaction takes from 18 to 48 hours and subsides slowly in a week or 10 days. The test appears to be reliable and is absolutely harmless. Sato gave tuberculin internally and obtained positive results in cases having tuberculosis; 0.01 of a gram was given in a capsule, care being taken that the stomach was empty. If no reaction was had from this dose, a larger amount was given. The advantage of this method is that the test may be made without the patient's knowledge. The cause of reaction to tuberculin applications and injections is now believed to be a hyper-sensitizing of the patient by the tubercular infection, to which the name of anaphylaxis (see ANTITOXIN) has been given. This ability to react is a good

omen in prognosis, and a tuberculosis patient who cannot react has lost his ability to resist the disease. Any of these tests may bring to light a latent or quiescent tuberculous process or a condition that needs no active treatment. Negative reactions are taken to indicate an entire absence of tuberculosis. Positive reactions, especially if confirmed by more than one test, combined with suspicious symptoms, point to the presence of a tuberculous process. The greater the intensity of the reaction and the sooner it makes its appearance, the more acute is the nature of the process and the more active are the fighting powers of the individual.

TUBERCULOSIS. The question of the transmissibility of bovine tuberculosis to human beings continued to excite much debate in 1909, following Professor Koch's pronouncement at the 1908 International Tuberculosis Congress that these diseases were distinct and that bovine infection was a very small factor in the spread of phthisis, a statement first made by Dr. Theobald Smith of Washington. The latest report of the Royal Commission on Tuberculosis, appointed in 1901 to inquire into the question, confirms their previous reports, which are in direct contradiction to Dr. Koch's views. The commission is of the opinion that bovine tuberculosis is communicable to man, and that a considerable amount of tuberculosis, especially in children, is due to milk containing the tubercle bacilli. The danger of milk yielded by tuberculous udders is well known, but the report indicates that the milk of cows suffering from visceral tuberculosis often contains virulent tubercle bacilli, although the udders may be perfectly healthy. Six cows were observed over a long period, and three showed obvious signs of tuberculosis, such as cough and emaciation, while the other three were apparently healthy and tuberculosis was discovered only by the tuberculin test. The milk of the three obviously diseased cows caused tuberculosis in guinea-pigs, while the milk of those in which the disease was revealed only by tuberculin failed to produce tuberculosis in guinea-pigs. Swine fed with the milk of these cows became tuberculous—an important observation, since pigs are often fed with the milk of sickly cows when it is deemed unfit for human consumption. This practice is plainly dangerous, since the pigs are eventually used as food for man. The feces of five out of six of these cows were found to contain virulent tubercle bacilli. Here is another source of infection, for in all but the best regulated farms the cleaning of the udders and quarters of milch cows is imperfect and the amount of fecal matter that finds its way into milk is considerable. While the above observations are important and suggestive and should give an impetus to the movement for obtaining a cleaner milk supply, they fail to prove conclusively that human beings are actually infected through animal sources. Pottenger, after an extensive observation of the reaction of patients with different forms of tuberculosis to human and bovine tuberculin, believes that while both human and bovine bacilli may attack man, the bovine bacilli gain a foothold only with difficulty, probably on account of the differences in the soil. Conversely, human bacilli infect cattle with difficulty for the same reason. In other words, while human and bovine bacilli are closely allied subspecies which

may have originated from a common ancestor, each has lived so long on a particular kind of soil that it develops poorly on any other. The latest contribution to the question as to the frequency of tuberculosis in man was furnished by Beitzke, who examined 1100 bodies at the Charité in Berlin, with reference to the occurrence of healed and active tuberculosis. He found that in children under 15 years of age tuberculosis is less common than in adults, involving but 27.3 per cent. of 198 children in about half of whom it was the cause of death. In 703 bodies of persons over 15 years of age, evidence of tuberculosis was found in 58.2 per cent. Therefore, Bietzke assumes that about one-half of all persons in all states of society suffer from a tuberculous lesion at some time during their lives. This is a wide departure from the startling findings made by Naegeli a few years ago that 90 per cent. of all human beings were affected, but the discrepancy may be accounted for by a difference in the interpretation of healed lesions found in the lungs and pleura.

There was no diminution of the warfare against tuberculosis during 1909. A large number of new hospitals, dispensaries and sanatoria, especially for the accommodation of tuberculosis patients, were opened during the year. Popular education was continued by means of lectures, traveling exhibitions and by teaching in the public schools. The first step toward a novel experiment in housing the tuberculous poor was taken by the purchase by Mrs. W. K. Vanderbilt of a site for the construction of three model tenements for poor consumptives, to cost \$1,000,000. They will be located on the east side of New York City and will be administered in connection with the tuberculosis clinic of the Presbyterian Hospital. Accommodations for from 375 to 400 families are contemplated, with surroundings especially favorable for consumptives. All the rooms will open outdoors, and there will be no dark halls, every apartment being entered from an outside stairway. The roof will be specially equipped, and in fact all the advantages of a sanatorium will be supplied except that the families will provide their own food.

TUFTS, FRANK LEO. An American scientist, died, as the result of an accident, on April 15, 1909. He was born in Finlay, O., in 1871, and took the degree of B. S. at Antioch College in 1891, and a post-graduate course at Columbia University. He was made a tutor in physics at that institution in 1898, instructor in 1903, and adjunct professor of physics in 1905. Professor Tufts came to his death by an electric shock while testing electric arc light wires at Bayonne, N. J. He contributed articles on physics to the *New International Encyclopædia* and the *New International Year Book*.

TUFTS COLLEGE. An institution of higher learning at Medford, Mass., founded in 1852. The students and faculty in 1909 numbered 1332. There were in the library 61,000 volumes. During the year there were received in gifts \$104,960. Among the additions to the faculty were the appointments of Arthur C. Lane, Pearson professor of mineralogy and geology. The total productive funds of the college amount to about \$1,650,000, and the income to \$225,000. The president is F. W. Hamilton, D. D., LL. D.

TUNIS. A French protectorate in Northern Africa. The capital is Tunis.

AREA, POPULATION. The area is estimated at 64,600 square miles. The majority of the natives are Bedouin Arabs and Kabyles to the number, roughly estimated in the absence of a regular census, of 1,700,000, inclusive of 60,000 Jews. The foreign population, according to the census of December 16, 1906, numbered 128,895, including 34,610 French exclusive of the military, 81,156 Italians, and 10,330 Maltese. The city of Tunis has 200,000 inhabitants, of whom 61,000 are Europeans.

There were (1905) 150 public, and 20 private, primary schools; a lycée for boys and one for girls; 2 colleges, a school of technology, and a normal school. There are also 1424 Mussulman primary schools, and a Mohammedan university at Tunis.

The Mohammedan population is under the religious jurisdiction of the Sheik-ul-Islam. The Europeans are mainly Roman Catholics. The French decree prohibiting congregational instruction to French children extends to Tunis.

INDUSTRIES. Agriculture is the principal occupation. The area (in acres) sown to principal crops, with the yield (in bushels) for three successive years, as reported to the French Chamber of Deputies, is given below:

Wheat, 1906, 93,900 acres, 1,135,080 bushels; 1907, 1,089,720 acres, 4,256,550 bushels; 1908, 1,087,258 acres, 2,837,700 bushels.

Barley, 1906, 91,428 acres, 3,149,847 bushels; 1907, 1,198,454 acres, 9,506,295 bushels; 1908, 1,099,613 acres, 6,313,882 bushels.

Oats, 1906, 84,015 acres, 2,128,275 bushels; 1907, 1,030,424 acres, 8,807,689 bushels; 1908, 1,005,713 acres, 4,905,580 bushels.

About 494,000 acres are under olive groves; 262,600 acres under cork-forests. The wine output in 1907 was 1,941,588 gallons. There are about 1,350,000 date palms in the southern part. Other products are almonds, oranges, lemons, shaddocks, pistachios, alfa grass, and henna. The number of live-stock, January 1, 1909, was reported as follows: Cattle, 158,062; sheep, 833,562; horses, 31,870; donkeys, 78,002; mules, 16,592; goats, 476,386; swine, 14,644.

The output from the mines increases steadily. In 1907 there were 32 mines in operation, copper, lead and zinc being the principal ores. Phosphate is the principal article of export, and the mines are being extensively developed.

The yield of the fisheries (mainly in the hands of Italians, Maltese and Greeks) in 1907 was as follows (exclusive of sponges): Sardines, 200,000 kilos, value 59,873 francs; anchovies, 55,000 kilos, 44,116 francs; allaches, 903,000 kilos, 212,150 francs; tunny-fish, 942,000 kilos, 201,164 francs; other fish, 1,816,000 kilos, 1,554,697 francs.

COMMERCE. The total imports for 1908 were valued at 123,028,000 francs, against 102,860,000 in 1907; the total exports, at 94,155,000 francs, against 103,361,000 in 1907. The principal articles of export in 1908 were as follows: Phosphates, 31,686,000 francs; olive oil, 13,995,000; wheat, 3,654,000; alfa, 3,071,000; live-stock, 2,946,000; hides and skins, 1,616,580; tanbark, 1,298,000; sponges, 1,139,000; wine, 818,000; barley, 757,000. France is greatly in the lead among the countries of origin and destination, having about 50 per cent. of the foreign trade.

COMMUNICATIONS. There were in 1908 754

post-offices was (1907) 384; the receipts amounted to 2,296,377 francs, and the expenditure (posts and telegraphs) to 2,002,310. There are good roads extending 1750 miles. The merchant marine in 1909 consisted of one steamer (304 tons net) and two sailing vessels (151 tons). In 1908 there entered the ports of the Regency 13,140 vessels of 4,150,070 tons (3904 steamers of 3,976,482 tons), of which 2207 of 1,906,060 tons were French.

FINANCE. For the year ending April 30, 1908, the revenue and expenditures were 69,670,800 and 63,449,800 francs respectively. The revenue was derived as follows: Monopolies, 14,163,300 francs; direct taxes, 10,299,700; indirect taxes, 8,994,000; customs, etc., 5,465,300; State domain, 1,840,200; various, 2,420,500; extraordinary, 26,487,800. The expenditures were: Finance, 17,053,000 francs; public works, 5,821,400; administration, 3,589,100; posts, telegraphs, 2,158,000; instruction, 1,778,400; agriculture and commerce, 1,290,400; justice, 934,300; war, 534,500; extraordinary, 30,290,700. The debt amounted at the end of 1906, to 232,181,500 francs. Tunisian bank-notes are issued by the Banque d'Algérie. The legal coinage, similar to the French pieces, is minted in France.

GOVERNMENT. Sidi-Mohammed en Nasser, the Bey and the nominal ruler, was born July 14, 1855, and succeeded to the throne May 12, 1906, upon the death of his cousin. The heir-presumptive is Sidi-Mohammed Ben Mamoun, born August 13, 1858. The protectorate is administered by a French resident-general (1909, Gabrielle Alapetite), who is also Minister of Foreign Affairs, and a ministry of seven French and two Tunisian heads of departments, all under the direction of the French Foreign Office. Subordinate positions are filled by natives. The army of occupation (which is provided for in the French budget) numbers 20,360, including 703 officers. The Bey's guard (nominally the Tunisian army) numbers about 600 officers and men. The French gendarmerie numbers about 150, and the Regency maintains a civil and rural police force.

TUNNELS. Tunnel construction in 1909 involved work in schemes of urban or interurban rapid transit, as in Paris, New York, Philadelphia, Boston, and other cities, or the construction of railway tunnels under rivers or harbors, for entrance into large cities, as well as the piercing of mountains, as was the case in the great Alpine Tunnels, on the Trans-Andine Railway, and the tunnels in the Sierra and Rocky Mountains of the United States.

DETROIT RIVER TUNNEL. At the end of the year the sub-aqueous section of the twin tube tunnel for the main line of the Michigan Central Railroad under the Detroit River, was practically completed. This section is 2625 feet in length and consists of two parallel circular tubes, with an interior diameter of 20 feet, placed together with a distance apart of 26 feet 4 inches on centres. The tubes are formed by a continuous exterior shell of $\frac{3}{8}$ -in. steel plate, 23 feet 4 inches in diameter, enclosing a lining of concrete 20 inches thick, which is reenforced by

first excavating by dredging a trench in the river into which the sections of the steel tubes built on shore were sunk and fastened successively one to another. A form was built around the steel shell sections when they were assembled on the shore, and into this the concrete was deposited from scows. The sections were then pumped out, and the lining of the tubes was taken up, the work being arranged so that the operation was continuous and the various processes would be taken up simultaneously. The first ten sections were each approximately 550 tons in weight, and 262.5 feet long, the eleventh or closing section was 130 tons in weight, and was 64.5 long.

HUDSON TUNNELS. The second pair of tubes of the Hudson and Manhattan Railroad Company under the Hudson River, were thrown open to regular train service on July 19, and trains were operated from the terminal at Cortlandt and Church Streets in Manhattan, to the Pennsylvania Station in Jersey City. Later the land tunnels to the Erie and Lackawanna Stations were put in service. The Northward extension towards 33d Street, New York, was making progress during the year, and plans were developed for the extension to the Grand Central Station. The twin tubes under the Hudson River were of the same design and construction as those constructed for the new part of the Hoboken tube. They are formed of segmented cast steel, being bolted together in the rear of the excavating shields, as the latter were advanced. The lower half of the tube is lined with concrete and the tunnels have a clear diameter of 15 feet.

PENNSYLVANIA TUNNELS. While the tunnel system of the Pennsylvania Railroad for its Greater New York Terminal was practically completed during 1909, these tubes were not ready for use. See **ELECTRIC RAILWAYS**.

GUNNISON TUNNEL. The completion of the Gunnison Tunnel, which was the main engineering feature of the Uncompahgre Valley Irrigation project, was one of the important works of 1909. The tunnel is 30,582 feet in length, laid on a uniform grade of 2.02 feet per thousand, with a flat bottom 10 feet in width, and with sides which batter outward at the top 6 inches in 10 feet. The roof is arched with a span of 11 feet, and a rise of 2 $\frac{1}{2}$ feet, giving a total cross-section area of 122 square feet, or 100 square feet of water-carrying section. The amount of water delivered through the completed tunnel, lined with concrete, was estimated at 1300 sec. feet. The work was carried on by force headings driven from the two portals and a main shaft. The tunnel presented many considerable difficulties, and in the course of its prosecution fifteen lives were lost.

LOETSCHBERG TUNNEL. Work on the Loetschberg tunnel progressed actively in 1909, and by December of that year, 7600 yards, out of a total of about 15,000 yards, or 8 $\frac{1}{2}$ miles were finished. Excavation on this tunnel commenced in October, 1906, and in July, 1908, an accident occurred in which twenty-five men were killed. The contract called for the completion of the work in Sep-

tember, 1911, and when finished it will be the third longest tunnel in Europe, being surpassed in length only by the Simplon, 12.25 miles, and the St. Gotthard, 9.25 miles. The Loetschberg tunnel is a portion of a line connecting Western Switzerland and France with Italy, by passing through the Bernese Alps. It is a double track tunnel, lined with concrete 1½ feet in thickness, and 26 feet 3 inches in width within this lining. It is 20 feet in height from the level of the rails to the centre of the roof arch, and has a ventilating tunnel on its western side. In 1909, 3500 workmen were employed, and 3 8-hour shifts were making a daily advance of about 18 to 21 feet.

TRANS-ANDINE TUNNEL. The Andes Summit Tunnel was holed through on the last week in November, and represented one of the most important works on the Trans-Andine Railway. It is a single track tunnel, about four miles in length, and for much of its length is timbered. It is located on the Chilean side of the international boundary, and was the last link in the Trans-Andine Railway. It was expected that the track construction through the tunnel would be completed in March, 1910.

Among other Swiss tunnels is that at Lichten-sieg, on the Bodensee and Toggenburg connecting line, which has a length of two miles. It was pierced through early in April of 1909. At the end of the year the last section, amounting to 2 miles 16 chains, of the Jungfrau railway was finished, so that it could be opened in the following year. The Tauern railway which contained a notable tunnel through the Alps at Gastein, 27,965 feet in length, and which represented an outlay of some \$7,000,000, was opened on July 5, 1909, although the tunnel had been pierced through in 1907.

OTIRA TUNNEL. The Otira tunnel on the Midland Railway that was being constructed by the government of New Zealand, was a notable example of the year. It is about 5½ miles in length, and runs in a straight line, with a grade of 3½ per cent., penetrating hard slate, and passing under the Otira Gorge. The work is carried on by two headings running from the portals, and both are driven by compressed air drills worked by electric compressors driven by water power in the vicinity. The tunnel driving has been carried on by three shifts of workmen, who make 6 feet advance with each blast. It was reported that about 80 feet per week of 6 days had been made at each portal.

TURFAN. A ruined city of Chinese Turkestan, especially noteworthy for its archeological remains and for the literary and linguistic fragments found there. The site and its neighborhood has been thoroughly explored by Prussian expeditions, and the publication of the material discovered is practically controlled by the Prussian Academy of Sciences, in whose *Sitzungsberichte* for 1909, will be found four papers upon new fragments. Of these, peculiar interest attaches historically to four Mongolian letters of an official nature, since these are precisely dated in years corresponding to 1326, 1398, and 1408, thus affording at least an approximate date during which this region was still flourishing. Another text, hitherto supposed to be Uiguric, has been shown by F. W. K. Müller to be really Sogdian, of which Iranian dialect only few fragments survive, and these practically solely in Turfan manuscripts. The text of this

particular text agrees, almost word for word, with a Chinese inscription found in the same site at Kara Balgassun. A number of fragments, in Turkish and Pahlavi, all Manichaean in subject, have also been published, and special interest attaches to one of these in that, although Manichaean, it contains an account of how the Buddha came to renounce the world (following the well-known story), while another text appears to be a translation from some Syriac work, which was probably apocryphal in nature.

Besides these German contributions, the Russian Academician, Salemann, has given, in Hebrew transcription, the texts already made accessible, with German translations, by Müller in his *Handschriften-Reste in Estrangelo-Schrift aus Turfan* (Berlin, 1904), the advance in this *Manichaean Studien* (part 1, St. Petersburg, 1908), lying in the editor's full vocabulary and grammatical sketch, which is of special value to students of Pahlavi and other Iranian dialects.

TURKEY, or THE OTTOMAN EMPIRE. A monarchy in southeastern Europe, southwestern Asia, and northern Africa. The capital is Constantinople.

AREA AND POPULATION. The estimated area in square miles and the estimated population, are stated as follows:

	Area	Popu-
	lation	
Europe	65,367	6,130,000
Asia:		
Asia Minor	193,600	9,089,000
Armenia and Kurdistan..	72,000	2,471,000
Syria	114,600	2,890,000
Mesopotamia	131,700	1,398,000
Arabia	170,300	1,050,000
Total in Asia	682,200	16,898,000
Africa:		
Tripoli and Benghazi....	405,800	1,000,000
Total	1,153,300	24,028,000

These figures do not include the nominal dependencies or tributary states of Egypt, Crete, Cyprus, and Samos (qq. v.). In European Turkey, Turks, Greeks, and Albanians are almost equally numerous and constitute about 70 per cent. of the population; about one-half of the total is Mohammedan, the other half being made up of various Christian sects and some Jews. In the Aegean islands, about nine-tenths of the inhabitants are Christians. Mohammedans constitute the great majority in Asiatic Turkey, and in Tripoli and Benghazi almost the entire population. The larger cities, with approximate population, are: Constantinople, 1,106,000; Salonika, 120,000; Adrianople, 81,000; Smyrna, 201,000; Damascus, 200,000; Bagdad, 145,000; Aleppo, 127,000; Beirut, 119,000; Jerusalem, 80,000; Brussa, 76,300; Kaisarieh, 72,000; Kerbela, 65,000; Mosul, 61,000; Mecca, 60,000. Primary instruction, which is nominally compulsory for Mohammedans, is entrusted to the clergy attached to the mosques. Secondary schools are not numerous; in a few, English or, more frequently, French is taught. Christian schools are established where the Christian population is comparatively strong. Schools of all kinds throughout the empire are said to number about 36,200, with upwards of 1,331,000 pupils.

quired amounts of land being held by the state, the gross produce harvested. This class of property is known as "miri." The tax-gathering is farmed out. The title to property known as "vakuf," is held not by the state, but by some religious or charitable institution ("pious foundation"), from which it is inalienable. This form of property is usually urban, nearly all of Constantinople being held under this tenure. There is also simple freehold tenure, but in comparatively small amount. Early in 1909 it was reported that a commission had been appointed to study the whole system of land tenure, with the object of bringing about a greater degree of uniformity. The empire contains much exceedingly fertile soil, but agricultural methods are primitive; and any incentive to the development of agriculture is hindered by the tithe system, and by custom dues on produce exported from one province to another. The principal crops are cereals, tobacco, cotton, olives, almonds and other nuts, and many kinds of fruit, especially figs and grapes. Olive oil and wine are important products; the average annual output of the former is about 60,000 tons; the estimated wine production in 1908 (including Cyprus) was about 30,600,000 gallons. Silk cocoons are produced, especially in the vilayet of Adrianople, whose production in 1908 amounted to 2,555,300 pounds. Figures for the total agricultural production of the empire are not available. In Asia Minor, goats are numerous, and mohair is a leading product.

MINERALS. In general, mining is little developed, although many of the provinces, particularly in Asia Minor, are rich in minerals. Copper is mined near Trebizond and, on a large scale, near Diarbekir. The extensive coal deposits of Heraclea, on the Black Sea, are exploited in a small way. Other minerals produced to a greater or less extent are chrome ore, silver-lead ore, zinc, manganese, antimony, emery, petroleum, and salt. Some gold, mercury, arsenic, and iron also occur.

MANUFACTURES. Manufactures, which, in the Western sense, are few and unimportant, include silk, cotton, and woolen fabrics (especially in Damascus), rugs and carpets (especially in Anatolia), wine, spirits, and tobacco products. There are a considerable number of grist mills, and a large amount of brass-turning and beating of copper into utensils for household use.

COMMERCE AND SHIPPING. The year ended February 28, 1906, is the last for which complete trade statistics are available. In that year the imports and exports were valued at £T31,366,021 and £T19,672,370 respectively (the Turkish pound is worth \$4.40). In the fiscal year 1897 imports were valued at £T21,350,706, and exports £T15,428,458. The principal imports in the fiscal year 1906 were valued in pounds Turkish as follows: Cotton piece goods, 4,000,000; sugar, 2,640,000; yarn, 1,470,000; flour, 1,134,487; rice, 1,077,243; linen, 1,045,055; petroleum, 1,037,198; coffee, 946,570; woolen stuffs, 895,609; cashmere, 639,820; timber, 388,418; drugs, etc., 357,495; iron goods, 350,737; leather, 341,946; hides, 312,053. The leading exports were: Silk cocoons, £T1,105,992; mohair, 914,000; figs, 902,279; coffee, 889,004;

000. Imports from and exports to the countries commercially most important, were as follows in 1905-6, in thousands of pounds Turkish:

	Imports	Exports
Great Britain	10,992	6,320
Austria-Hungary	6,516	2,137
France	2,669	4,811
Italy	2,446	996
Russia	1,820	594
Germany	1,325	1,228
Belgium	936	483
Egypt	926	...
Rumania	795	400
Persia	734	655
Netherlands	597	581
Greece	561	544
Bulgaria	467	760
United States	288	492

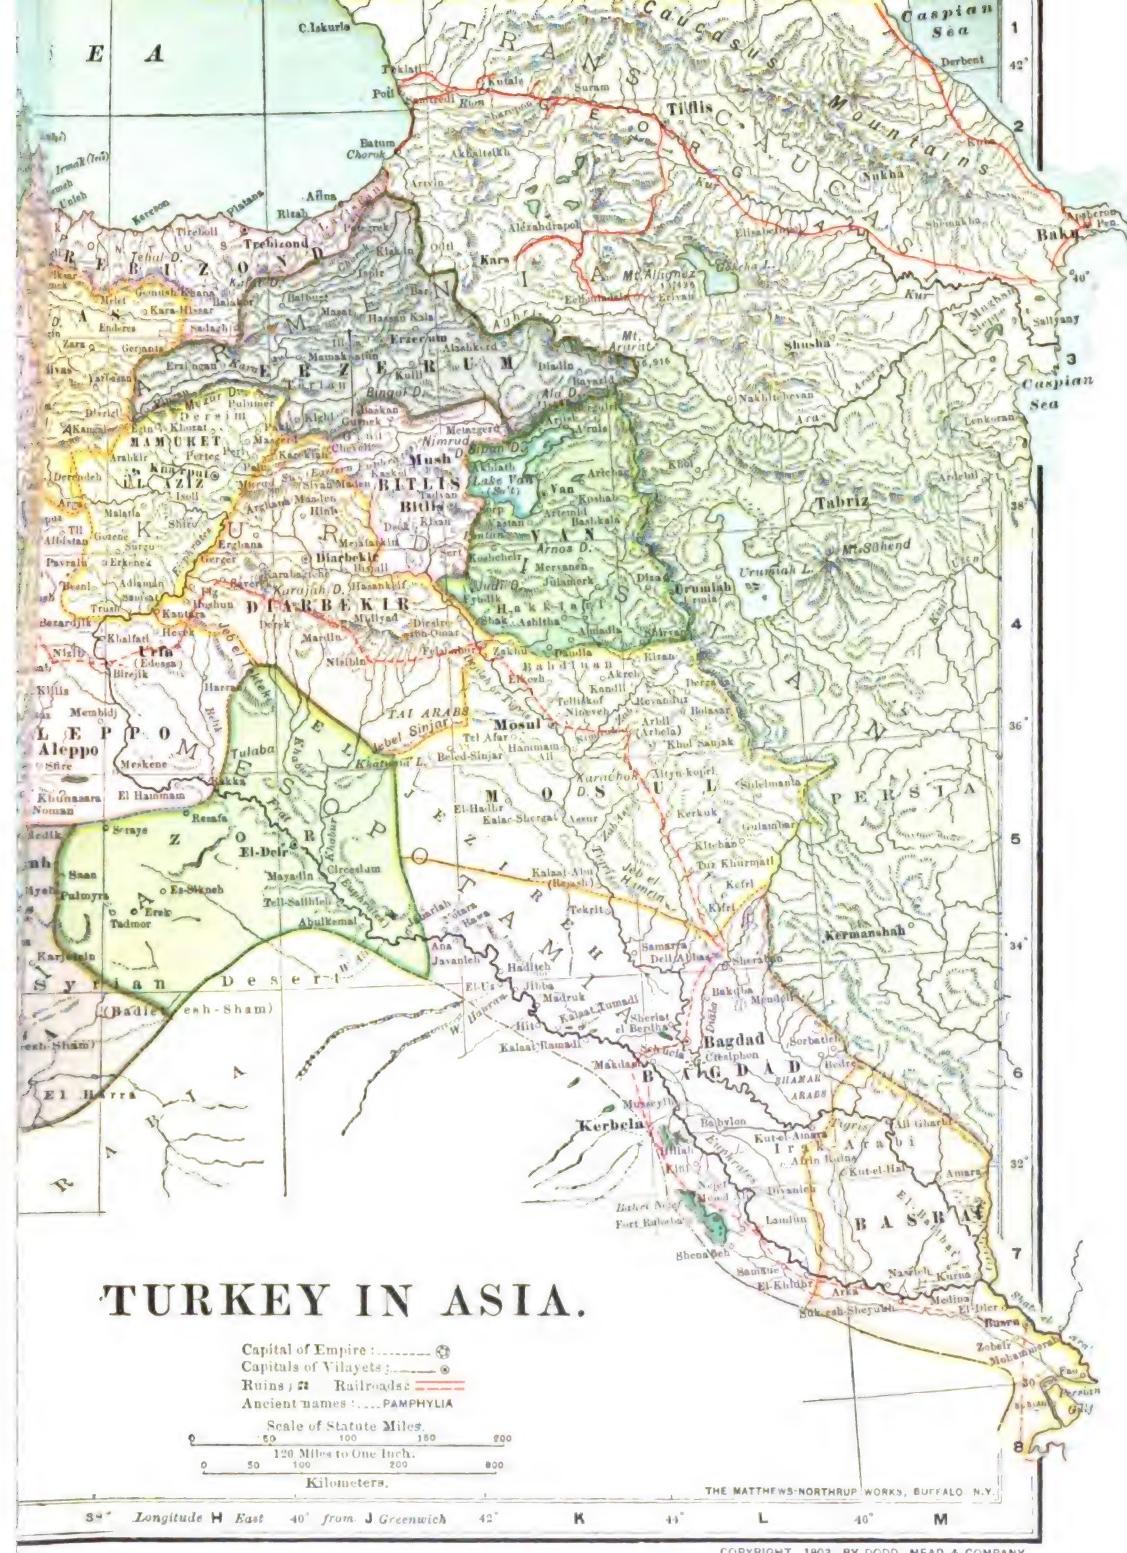

The foregoing figures do not include the trade in tobacco. In the fiscal year 1906, the imports comprised 2887 kilos of tobacco, 17,796 kilos of snuff, 6,926,631 cigars, and 1,237,404 kilos of tumbak; the exports amounted to 18,110,646 kilos sent to foreign countries, besides 3,465,958 kilos sent to countries within the empire. In 1907 the reported imports at Constantinople were valued at \$142,170,000.

In 1905-6 there entered and cleared at the ports of Turkey 47,265 steamers, of 44,257,892 tons, and 129,796 sailing vessels, of 2,293,977 tons. In 1909 the merchant marine consisted of 110 steamers, of 69,440 tons, and 936 sailing vessels, of 202,609 tons.

COMMUNICATIONS. Railways open to traffic in 1908, were as follows: In Europe: Oriental Railways, 780 miles; Constantinople-Salonika,* 317; Salonika-Monastir,* 136; total, 1239 miles; in Asia: Haidar Pasha-Ankara,* 358 miles; Eshkishehr-Konieh,* 283; Mudania-Brussa, 25; Smyrna-Cassaba,* 165; Alasheir-Afion-Karahissar, 156; Smyrna-Aidin, 320; Konieh-Eregli-Persian Gulf* (Bagdad Railway), 125; Rayak-Aleppo,* 295; Beirut-Damascus, 96; Mersina-Adana, 42; Jaffa-Jerusalem, 54; Haifa-Deraa, 105; Damascus-Medina, 750; total in Asia, 2774 miles; grand total, 4013 miles. The lines above which are marked with a star have a kilometric guaranty from the government; the guaranties paid in 1906 amounted to £T691,102; and in 1907 £T753,191. Work is progressing, but slowly, on the Bagdad Railway, and the line from Damascus to Medina is being pushed on toward Mecca. The revolution of 1909 aroused business activity in many quarters, one result being the projection of various new railway lines and extensions. In 1906, there were 28,890 miles of telegraph line, with 49,200 miles of wire and 1017 offices. Post-offices in 1907 numbered 1312. In most of the large coast towns foreign post-offices are maintained.

BANKS. The Imperial Ottoman Bank, with a capital of £T11,000,000, had on October 31, 1907, a note circulation of £T1,313,100 and cash on hand £T2,567,100. The impetus given to general business enterprise by the radically changed political conditions in 1909 was particularly manifested in banking activity. New banks were founded and branches of existing

banks were established in various commercial centres. Of first importance is the organization at Constantinople of the Ottoman National Bank, to the presidency of which an Englishman was appointed at the request of the British government; whence it appears not only that British influence will be paramount in the management of the bank, but that it will undertake in some degree the development of the large industrial and commercial resources of Turkey, under the new progressive régime. This bank has an initial capital of £T3,000,000, with power to increase to £T10,000,000. It is expected that agencies will be established in the provinces. Also in 1909 a Russian bank was opened at Constantinople; branches of the Bank of Athens were established at Trebizond and Samsoun, and a branch of the Deutsche Orient Bank at Mersina; the Bank of Salonika increased its capital; and it was decided to establish a land-mortgage bank.

FINANCE. Up to 1909 the government did not publish statements or estimates of revenue and expenditure. The first official budget was published that year for the fiscal year 1910, and it showed an estimated revenue and expenditure of £T25,079,062 and £T30,539,545 respectively. The principal items of estimated revenue were: Direct taxes, £T13,377,229 (including tithes, 5,383,102; land tax, 2,435,764; payments exempting from military service, 1,289,812; tax on live-stock, 1,699,349); customs, 3,946,224; government monopolies (salt, tobacco, gunpowder, etc.), 2,228,425; government industrial enterprises, 1,308,628; stamps, etc., 1,094,146; tribute of Egypt and Cyprus, 871,316. The larger estimated expenditures were: Army, £T8,711,903; public debt, 8,294,262; finance, 2,723,234; gendarmerie, 1,800,714; interior, 1,491,742; navy, 1,228,840; commerce and public works, 1,064,123; posts and telegraphs, 692,899; Damascus-Mecca Railway, 689,251; public instruction, 660,527; justice and worship, 651,917; civil list, 522,570; customs (collection charges, etc.), 514,838; bureau of the Sheikh-ul-Islam, 485,433; agriculture, forests, and mines, 345,597; foreign affairs, 218,310; Parliament, 215,346.

On June 30, 1908, the debt stood as follows: Loans secured on Egyptian tribute, £T18,803,446; loans secured on administered revenue, 75,195,982; various loans, 10,749,420; total, £T104,748,848. In addition there were the Russian war indemnity, amounting to £T24,513,000 in 1898 (after which year the annual instalment of £T350,000 was not paid), and a debt of £T273,494 for the Beirut-Damascus Railway. By the agreement between Turkey and Russia, the latter relinquished in 1909, 40 out of 74 annuities of £T350,000. In June, 1909, a 4 per cent. loan of £T4,758,700 was subscribed in London, Paris, and Berlin.

NAVY. The Turkish navy includes many obsolete and otherwise non-effective vessels, and some of those classed as effective are hardly to be so regarded. However, a number of old ships have recently been reconstructed and are in fairly good condition. An entire naval reorganization has been begun under the direction of Rear-Admiral Douglas Austin Gamble, of the British Navy. The effective fleet in 1909 included the following vessels: 2 small battleships, aggregating 13,827 tons; 4 armored corvettes, 10,406 tons; 2 protected small cruisers, 7050

tons; 1 torpedo vessel, 900 tons; 2 torpedo dispatch boats, 1400 tons; 5 torpedo-boat destroyers, 890 tons; 22 torpedo boats, 1612 tons; 2 submarines, 596 tons; total, 40 vessels, of 36,681 tons. In addition there were various transports, dispatch boats, etc. Vessels under construction in 1909 were: 2 armored cruisers, aggregating 14,273 tons; 4 protected cruisers, 11,300 tons; 2 torpedo vessels, 1550 tons; 11 torpedo boats, 1120 tons; total, 19 vessels, of 28,243 tons. A programme of construction was announced in 1909, comprising 6 battleships, 12 destroyers, 12 torpedo boats, 6 submarines, 24 gunboats, 2 mining vessels, 4 monitors, 2 training ships, 1 hospital ship, and 6 transports. This programme contemplates an expenditure of about \$80,000,000, and is consequently viewed with considerable skepticism.

ARMY. Military service in Turkey is compulsory, all Mussulmans being liable to service, but Christians and certain sects are exempt upon payment of a tax. Universal service with the intention of doing away largely with the exemptions was a feature of the constitution of July 24, 1908. During 1909 the army was in process of reorganization, and it was determined that the new scheme adopted for this work should go into effect in March, 1910. This work of organization and training was under the direction of General von Goltz, of the German army, with a staff of 16 German officers. A number of radical reforms were anticipated, and it was believed that the division of the empire into seven army corps districts (Constantinople, Adrianople, Salonika, Erzinjan, Damascus, Bagdad, and Sana), and two independent divisions (Medina and Tripoli), would be supplanted, and a number of divisions organized, each consisting of three regiments (nine battalions and a training battalion).

In 1909 the effective peace strength was estimated at 700,620, of which 583,200 were infantry, 55,300 cavalry, 54,720 artillery (174 field and 22 mountain batteries). The Nizam or active army contained 320 battalions of infantry, 203 squadrons of cavalry, and 248 (6-gun) batteries of artillery, making a total of about 260,000 with a reserve of 120,000. The Redif contained 374 battalions of infantry and 666 supplemental and incomplete battalions and 48 squadrons of cavalry, and was organized in two classes. This with the Mustafiz landsturm, would probably give the Turkish army a war strength of over 1,000,000. Mention should also be made of various irregular troops, most important of which was the "Hamadieh," a tribal cavalry raised in Anatolia among the Kurds, and in 1909 amounting to 266 squadrons.

GOVERNMENT. The fundamental laws of the empire are based on the precepts of the Koran. A constitution proclaimed by Sultan Abdul-Hamid II. in November, 1876, and suspended about a year later, was restored on July 24, 1908, in consequence of the prevailing discontent. The constitution provides for a Parliament of two houses, the Senate (members of which are to be appointed by the Sultan from those who have rendered distinguished service to the state), and the Chamber of Deputies (members chosen indirectly by manhood suffrage, without distinction of race or creed). The chief executive authority is vested in the Sultan (assisted by a cabinet), who is also the head, or supreme

caliph, of the Mohammedan church (Sunnite). His representative in ecclesiastical affairs is the Sheikh-ul-Islam. The Sultan is Mohammed V., who was born November 3, 1844, the son of Sultan Abdul Medjid, and succeeded to the throne April 27, 1909, on the deposition of his elder brother, Abdul-Hamid II. His cousin Youssouf Izzedin, is heir-presumptive, born October 9, 1857, the son of Sultan Abdul Aziz. The ministry at the end of 1909, was constituted as follows: Grand Vizier (Premier), Hussein Hilmi Pasha; Sheikh-ul-Islam, Sahib Mollah; Minister for Foreign Affairs, Rifaat Pasha; Interior, Talaat Bey; War, Salih Pasha; Marine, Arif Hikmet Pasha; Finance, Djavid Bey; Commerce and Public Works, Haladjian Efesti; Public Instruction, Nafl Bey; Pious Foundations, Halil Hamada Pasha; Mines, Forests, and Agriculture, Aristidi Pasha; President of the Council of State and Minister of Justice, Nedjmeddin Bey.

HISTORY

DOWNFALL OF THE KIAMIL MINISTRY. The first session of Parliament under the new régime opened on December 17, 1908. The Young Turk movement, directed by the Committee of Union and Progress, had culminated in the revolution of July 24, 1908, with complete success. The chief issues before the new government were the settlement of the questions of compensation with Austria-Hungary for the annexation of Bosnia-Herzegovina, and with Bulgaria for the loss of Turkish suzerainty through the assertion of Bulgarian independence. The protocol with Austria-Hungary was signed by the two governments on February 26, whereby Austria-Hungary was to pay Turkey the sum of £T2,500,000, and in the same month an agreement was reached as to the Bulgarian indemnity, whereby, through the intervention of Russia, the Turkish demands were satisfied. The negotiations in the Bulgarian affair were formally concluded on April 19. (For details of both these matters, see the article BALKAN QUESTION.) Another important issue was the status of Crete, now that the time for the withdrawal of the four protecting Powers from the island was approaching. This will be discussed in a later paragraph (see also CRETE, paragraph on *History*). In January, the Grand Vizier Kiamil Pasha, after submitting to Parliament a review of Imperial affairs, received a unanimous vote of confidence. He soon showed, however, that he was in sympathy with the Liberal Union, which had developed in opposition to the Committee of Union and Progress. He accused the Committee of planning a coup d'état, and the deposition of the Sultan, which they in turn denied. He thereupon dismissed the Ministers of War and Marine, who were partisans of the Committee and appointed their successors. The Committee took prompt action and Kiamil was required to give an account of his arbitrary acts before Parliament. He urged his constitutional rights and deferred his appearance. Great indignation was expressed at this, not only in Parliament, but among the officers of the army and navy. Parliament voted "no confidence" by an overwhelming majority. Meanwhile Kiamil resigned and was succeeded by Hilmi Pasha. It was thus proved that the Committee of Union and Progress continued paramount.

THE COUNTER-REVOLUTION. During February

and March there were signs of bad discipline in the army. On February 23 the Minister of War, in a note addressed to the commanding officers, referred to the disrespect shown by subalterns to their superiors, and condemned officers for their activity in political affairs. A number of comparatively slight incidents showed the development of the mutinous spirit. At the Yildiz it was necessary to remove an Arab and an Anatolian battalion on account of insubordination. In the first week of April the government became aware of a formidable movement among the troops at the capital and took some defensive measures. These were ineffective, however, and on April 13 a serious mutiny or counter-revolution broke out. Its immediate occasion was the order of the government on April 12 that the troops must, if necessary, fire upon civilians and even priests. It was, however, the outcome of the reactionary movement which had been going on for some months. The Young Turks, represented by the Committee of Union and Progress, were the party in control of the government. They were men of education and advanced views, who went too fast in their Europeanizing measures for a considerable portion of the people. They shocked prejudices and traditions, especially in religious matters, and many of the officers of the army showed a contempt for religious observances, while the rank and file were thorough Mussulmans. Agitators took advantage of the situation to foster discontent among the men. There were many theological students (softas) in Constantinople, and they were very active in appealing to the religious prejudices of the troops. The work of reaction was also aided by the numerous lackeys and hangers-on of the Palace, who naturally wished the overthrow of the present régime, fearing they might lose their places. Money was said to have been distributed freely among the troops before the mutiny. On April 7, Hassan Fehmi, editor of the *Serbesti*, an Opposition paper which had sharply criticised the Committee of Union and Progress, was assassinated, and the crime was attributed to the Committee by its enemies. This further worked on the spirit of the mutineers. Early in the morning of April 13 a body of mutinous troops under an Albanian corporal and a member of a reactionary organization, gathered near St. Sofia, seized the Parliament building and the telegraph office, cut the wires and killed two officers belonging to the Committee. The loyal troops of the Committee in Constantinople were too few to offer an effective resistance. The mutineers demanded the dismissal of the Grand Vizier, Hilmi Pasha, and of the president of the Chamber, and of the Minister of War. The Grand Vizier resigned that afternoon. Nazim Pasha, Minister of Justice, was killed, and the Minister of Marine was wounded. Other battalions, especially the Salonika rifles, joined them. The mutineers were also recruited by the troops coming from Scutari and Pera. The commander of the loyal troops had been on the point of marching against them, but he was forbidden by the Grand Vizier, as resistance seemed hopeless.

The victory of the mutineers was complete. A new cabinet was announced on April 14, under Tewfik Pasha, as Grand Vizier, and after the installation of the new government the troops returned to their quarters. Edhem Pasha was made Minister of War. The mutineers killed a number of their officers from among those

who had come from the military schools—the special objects of their hatred. Many of the Young Turks left the city. The commander of a cruiser that had threatened to bombard the Yildiz was dragged from his carriage, while passing through the streets, and murdered under the windows of the Palace. On the whole, however, the mutiny was accompanied by little bloodshed. It was largely a rising of the troops against their superior officers, though employed by the reactionaries for their own ends. The idea was spread among the troops that the Sacred Law was in danger, and their cry was not only for the restoration of the constitution, but for the Sacred Law.

THE SUPPRESSION OF THE MUTINY. The Committee of Union and Progress had been taken by surprise, and their overthrow seemed complete, but they developed unexpected energy and resources. The second and third army corps at Adrianople and Salonika remained loyal. They were ready for action and under excellent discipline. The authorities acted with astonishing promptness. Within four days of the mutiny, the Macedonian troops had been concentrated at Tchataldja, a day's journey from Constantinople. There was no haste or confusion in the movement, which was carried out with remarkable precision and rapidity. On the arrival of the Salonika, troops under Husni Pasha at San Stefano, a parliamentary deputation was sent to them. The reply to the deputies' inquiry as to the intention of the military was, that they would remain until liberty was restored in Constantinople, but that they would do nothing to provoke a civil war. On April 19, Husni Pasha issued a proclamation declaring that the mutiny had disgraced the nation, and commanding the officers and soldiers in the city to return to duty, to take oath on the Koran that they would obey their superior officers, and henceforth to keep out of politics. A second proclamation declared that the constitution had been overthrown by the reactionaries, that the army had come to defend it, but would punish only those who had instigated the crime, and would respect the life and liberty of Ottomans and foreigners. The officers and crews of most of the warships took the oath of obedience as commanded. The prompt action of the Macedonian army overawed the mutinous troops in Constantinople, and no effective means of offering resistance were taken. Before dawn on April 24 the loyal troops entered Constantinople. They encountered resistance from some of the barracks, especially that of Taxim in the heart of Pera. On two occasions the mutineers treacherously displayed the white flag, and then fired upon the advancing party. In some instances it was necessary to resort to artillery fire in order to reduce the barracks. By the afternoon, however, the resistance was at an end. Shevket Pasha, the general-in-chief of the Macedonian troops, estimated the number of troops on his side killed and wounded at 300. The number of casualties among the mutineers was probably much greater. On April 26 Shevket Pasha, having trained the guns on the Palace and concentrated his troops at all approaches, received the surrender of the Sultan's personal guard. Some of the mutineers' leaders were shot, and the rank and file were conveyed to distant garrisons. On April 27 the National Assembly met with closed doors and a *fatwa* was read, reciting the crimes and

calamities of the reign of Abdul Hamid, including the massacres, corruption, and the destruction of the Sacred Books. The question was then submitted to the Assembly whether he should be deposed or should voluntarily abdicate. The Assembly unanimously voted for deposition. A deputation then waited on Abdul Hamid, who begged that his life and the life of his children should be spared, and that he might be sent to the Cheragen Palace, or, if that could not be done, that he might remain for the present at the Yildiz. He was placed, however, on April 28 aboard a special train for Salonika, and he was there confined under guard at Villa Allatini. Meanwhile, the deputies had waited on his brother Reshad Effendi, and informed him that he had succeeded (April 27). The guns were being fired to salute him as Sultan at the time that Abdul Hamid was informed of his deposition. The new Sultan succeeded under the title of Mohammed V. The Tewfik Cabinet resigned on May 5, and Hilmi Pasha again became Grand Vizier. Shevket Pasha had declared the city in a state of siege. He had been the soul of the movement for the suppression of the revolt, and for a time was the most powerful man in the State, virtually a dictator. The victory of the Macedonian troops demonstrated the high morale of both officers and men, and the profit they had derived from the introduction of methods based on the study of European models. On May 1 the Sultan announced that the objects of the government would be to guarantee liberty, justice and equality to all, and to improve the army and navy and the administration in all departments. On May 2, thirteen leaders of the mutiny were hanged, and other executions followed on May 4. On May 3, Shevket Pasha declared that henceforth the army should be independent and that any officers who continued as members of political societies should be dismissed from service. On May 10, Mohammed V. was invested with the sword of Osman amid solemn ceremonies.

ARMENIAN MASSACRES. Violent outbreaks occurred in Asia Minor, while these events were taking place at the capital. The reactionaries had been busy in the provinces, and a wave of religious fanaticism swept over a number of cities in which the Armenian element was considerable. The Armenian Christians were massacred in great numbers at Adana and other cities. Among those killed were two American missionaries, Maurer and Rogers, who were endeavoring to aid the victims. British, French, German and Italian warships were despatched to cities on the coast for the protection of the citizens. The reports as to the number killed were conflicting. According to the British Vice-Consul at Mersina, who reported on April 21, 2000 were killed at Adana, including 600 Moslems. A dispatch dated May 2, however, adds that 6500 were killed in the city of Adana and that from 30,000 to 35,000 in the province were left destitute. Further reports charged that terrible atrocities had been committed upon women and children. The official Turkish statistics issued in June, gave the number of buildings burned as 4823, including 386 belonging to the Moslems. Adana was the centre of the uprising. Early in May it was said that 4000 troops were engaged there in looting and burning, and in terrorizing the inhabitants; that the authorities were suspected of permit-

mously passed for the appointment of a parliamentary commission to investigate the circumstances of the rising, for the creation of a court-martial at Adana, and for a relief fund of £T20,000. There was, however, a tendency among the Turks to minimize the affair and to lay the blame on the Armenians, who, indeed, in certain instances, appear to have been indiscreet and provocative. Among foreign Powers, especially in France, the need of caution was felt in order not to embarrass the new régime. When the subject came up for discussion in the French Chamber in May, M. Pichon declared the government's confidence in the new Turkish ministry, and urged that nothing be done that could hamper it or discredit it with the people. The Armenian Patriarch resigned in September as a protest against the alleged partiality of the punishment of those involved in the massacres and especially complaining that four Armenians who were, in his opinion, innocent, had been executed. He declared that the number of Moslems sentenced (40) was far too few, that the punishments were too mild, and that the persons who were really responsible had not been brought to justice. In July the report of the court-martial at Adana condemned the incapacity of the Valis and blamed the local officers. It said that fifteen had been hanged, that 800 deserved death, 15,000 a sentence to hard labor for life, and 80,000 to imprisonment, but urged a general amnesty for the purpose of effecting a reconciliation. There was much criticism of the government's laxity toward those responsible for the massacre. See below, *Parliament and Other Events*.

THE CRETAN QUESTION. On July 13 the four protecting Powers notified the Turkish government that on July 26 they would withdraw their garrisons from Crete and would station four warships in Cretan waters to protect Moslem rights and maintain the *status quo*. This action was taken in spite of the previous request on the part of Turkey that the withdrawal of the troops should be deferred. The Powers notified the Cretans at the same time and also warned the Greek government that any action that could be regarded by Turkey as provocative would, in the end, be injurious both to the Cretans and to the Greeks (see *CRETE* and *GREECE*, paragraphs on *History*). The evacuation took place without disturbance at the date appointed. Then followed the incident of the hoisting of the Greek flag, described in the article on Crete (q. v.), and the prompt intervention of the Powers, which landed bluejackets on the island, who hauled down the flag. Both before and after this event there was strong popular feeling in Turkey in favor of vigorous measures to preserve Turkish authority over Crete. Meetings were held at Salonika and Monastir, and warlike messages were sent to the central authorities of Constantinople. On August 5 the Turkish government addressed a note to Greece demanding positive assurance that the Greek government did not intend to annex Crete. Turkey issued a circular to the Powers in the second week of November urging that the status of Crete be settled at as early a date as possible in such a manner as, while

would be maintained.

CONDITIONS IN THE PROVINCES. While the disturbances in Armenia were taking place, reports came of trouble in Bagdad, Macedonia and Albania, and of a famine in Anatolia. There were signs of revolt in Albania in May, and some fighting took place there in the following month, when it was reported that the government would endeavor to disarm the Albanians. In Macedonia generally, however, the population was comparatively free from the attacks of the bands, and although some thirty assassinations took place during the early summer they were mostly of a political nature. A bill was introduced in Parliament dealing with the dispute as to the ownership of churches and schools in Macedonia. It provided that the party having the firman which permitted construction should have possession of the schools and churches without regard to its numerical strength. This would turn over nine-tenths of the contested churches and schools to the Patriarchist minority instead of the Exarchist majority. The Bulgarian Exarchate protested against the bill, demanding that all Bulgarian churches and schools should be turned over to the Bulgarian communities.

Early in the year there were reports of a rising, 25,000 strong, in Yemen under the new Mahdi. In April the Arabs of Basra were reported to be in revolt, firing on the steamships of the Tigris and causing a suspension of traffic. Great energy was shown by Nejmed-Din Bey in putting down the revolt of the Arabs, which at one time threatened a general rising throughout the delta of the Euphrates. Some of the Yemen tribes surrendered in July. In August a Parliamentary commission, appointed to investigate the affairs of Yemen, reported of a scheme allowing the tribes a considerable measure of autonomy. There were later reports, however, of continued disturbance in the region. There was also trouble in the Dersin district, which suffered from the raids of the Kurds, but a military expedition was dispatched against them and most of the chiefs submitted.

PARLIAMENT. After a session of nine months Parliament was prorogued for three months on August 29. Its record may be briefly summarized as follows: Parliament was confronted by the complex and difficult task of reorganizing the organic law and the administration to conform to the principles of the new régime. During the session 668 motions concerning changes in the constitution and the organic law were submitted and of these 158 were passed and sent to committees; 73 bills were submitted and of these 53 were passed, the rest being still in committee; 10,000 petitions were presented, of which 4500 were granted. There was much criticism of the Parliament on the part of the progressive element as being too conservative. One of the chief measures passed was the Law of Associations which forbade the formation of clubs or associations on a racial basis and contained other provisions as to religious associations and trade unions. The new found liberty as to public gatherings, speech and the press

tended to degenerate into license and it was soon found necessary to impose restrictions. Besides the Law of Associations, a Press Law was drafted after the counter-revolution of April 13, containing regulations that were criticised as too severe. These were somewhat modified by the Senate but were still believed by many to be too strict. Another measure that aroused criticism was the law restricting the privileges of foreign advocates in the Turkish courts. It provided that, while a foreign lawyer may plead in the mixed commercial tribunals, he may not plead in the ordinary civil commercial courts unless he has knowledge of the Turkish language and can produce a certificate signed by ten Ottoman advocates that he will practice with perfect honesty within the Ottoman Empire for a period of not less than three years. The law, which was not so radical as its original advocates desired, was still regarded as dangerous and unfair and it was hoped that it would be subsequently modified. An important question before Parliament was that of admitting Christians and Jews to military service from which they had hitherto been excluded, and Parliament, though hesitating to approach a question which dangerously involved religious prejudice, finally drafted two laws on the subject, but they were somewhat indeterminate and the matter could not be regarded as settled. In May, Shevket Pasha announced that henceforth Christians would be admitted to the army up to the limit of 25 per cent. He took this measure while awaiting Parliamentary action in the matter. One of the final acts of Parliament was the passage of a measure of amnesty to the prisoners who had escaped or been set free when the new constitution was proclaimed. Another important decision was the rejection of the finding of the Adana court martial, the ordering of a new investigation and the grant of £100,000 for the rebuilding of the devastated districts. The Grand Vizier then issued a proclamation exonerating the Armenians from the charge of a conspiracy against the present government. The second session of Parliament opened on November 14 and Ahmed Riza was elected President. The budget for 1910 showed a deficit, on account of diminished receipts, of £4,437,807. Negotiations were begun with Bulgaria regarding the extradition of criminals and the status of Bulgarian subjects born in Turkey.

OTHER EVENTS. For an account of the project of Mesopotamian irrigation, see **MESOPOTAMIA**. In August the Council of Ministers approved the plans for the extension of the Bagdad Railway via Alexandretta, the new section to run from Bulgurlu to Aleppo through the Taurus and Amanus Mountains—a difficult piece of engineering. Toward the end of the year a new company of foreign bankers was formed for the continuation of the railway under a German director. On July 23 the anniversary of the establishment of the constitution was celebrated with a military display at the "Hill of Liberty." An important event in the history of the Turkish finances was the first meeting of the Advisory Board of the Finance Ministry, which was held on September 21. It comprised the British, French and Italian representatives in the Macedonian Financial Commission, three Turkish members, and two special technical and financial advisers. Its

functions were executive as well as advisory and its decisions were to be regarded as binding. It was to be consulted in all financial matters. German officers were called in to aid in the reorganization of the Turkish army, and their duties were completed in October. The reorganization of the navy under the British adviser, Rear-Admiral Gamble, was still going on. On December 11-12 26, Moslems were executed for complicity in the Adana massacres. The amount of treasure found in the Sultan's Palace and appropriated by the State was said to come to \$5,000,000.

TURKS AND CAICOS ISLANDS. Two groups of islands, over 30 in number, geographically a part of the Bahamas, but forming a dependency of the British colony of Jamaica. Only eight are inhabited. Total area, 169 square miles. Population some 5300, about one-third being in Grand Turk. Government schools provide free elementary instruction. The principal industry is salt raking, about 1,800,000 bushels being produced annually. Imports and exports in 1908, £24,426 and £24,798 respectively, against £27,660 and £23,817 in 1907. Revenue and expenditure in 1908, £7404 and £7430; in 1907, £7391 and £7119. Commissioner (at Grand Turk) in 1909, Frederick H. Watkins.

TURPIE, DAVID. United States Senator (Democratic) from Indiana from 1887 to 1899, died April 21, 1909. He was born in Hamilton county, Ohio, in 1829, and graduated from Kenyon College in 1848. In 1849 he removed to Indiana and began the practice of law. He was elected to the State Legislature in 1852, and on the expiration of his term was appointed Judge of the Common Pleas Court. In 1856 he was made Judge of the Circuit Court. He was subsequently elected again to the legislature, and served as Speaker of the House. In 1863 he was elected to the United States Senate to fill an unexpired term, and from then until 1887 he practiced law. In the latter year he defeated Benjamin Harrison for the United States Senatorship, and was renominated and reelected in 1893. From his retirement from the Senate to his death, Senator Turpie was practically an invalid.

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. An institution for the education of negroes at Tuskegee, Alabama, founded in 1880 by Booker T. Washington. The attendance for 1908-9 was 1494 and there were 167 members of the faculty. The institute in addition to classroom and technical work at the institute proper, carries on what may be designated as extension work. This includes the annual negro conference with its numerous branches, the publication of a weekly farm paper, *The Farmers' Monthly Institute*; a short course in agriculture; farm demonstration work, supported by the United States government and the General Education Board; a town night school and a town day cooking school; a county Ministers' Institute; ministers' night school; weekly mothers' meeting; supervision of the County and State Fair; a National Negro Business League, and a general effort to coöperate with county officials to improve the county schools. Gifts and endowments were received during the year from all sources to the amount of \$201,483. The endowment fund in 1909 was about \$1,600,000.

TWEEDMOUTH, EDWARD MARJORIBANKS, Second Baron. An English Cabinet officer, died September 15, 1909. He was born in 1848 and was educated at Harrow and Christ Church Oxford. In 1874 he became a barrister of the Inner Temple. His political career began in 1880, when he entered the House of Commons as the Liberal member from Berwick. He retained this seat until 1894. From 1893 to 1894 he was parliamentary secretary of the treasury. In the latter year he succeeded to his title and was made Lord Privy Seal and Chancellor of the Duchy of Lancaster. These offices gave him a seat in the Cabinet formed by Lord Rosebery. He went out of office with his party in 1895 and did not reenter official life for ten years, when he was appointed First Lord of the Admiralty in the Campbell-Bannerman Cabinet of 1905. The most conspicuous incident in Lord Tweedmouth's political career was in connection with the correspondence carried on by him with Kaiser Wilhelm in 1908 in relation to the British navy. It became known that he was in correspondence with the Kaiser and the report greatly inflamed the English press. The correspondence had to do with the English naval programme and a letter from the Kaiser to Lord Tweedmouth was alleged to have contained hostile criticisms of Sir John Fisher, Senior Lord of the British Admiralty. The Kaiser's letter undertook also to allay the fears of German invasion with the assertion that the German navy was scarcely one-fifth as great as that of England. This episode was greatly magnified by the English press. The chief indignation was expressed not so much at Germany as at Lord Tweedmouth. He undertook to explain his part in it in the House of Lords. He admitted having received the letter, but asserted that it was private and personal. With the death of Campbell-Bannerman in June, 1908, came the reorganization of the Cabinet and to Lord Tweedmouth was given the empty honor of Lord President, and the following September he retired altogether from the Cabinet. It is believed that his death was hastened by his mortification over the incident which ended his political career.

TYPHOID FEVER. The fact, recently discovered, that certain individuals, themselves in good health, may harbor and excrete large numbers of typhoid bacilli over a number of years, and thus become permanent sources of infection, has given a different aspect to the problem of typhoid dissemination. This phase of the subject received a large share of attention from investigators in 1909 and many remarkable carriers have been discovered in various parts of the world. Debré quotes statistics which show that of 451 cases of typhoid in women in Germany, 80 per cent. were domestics more or less connected with the cooking of the meals. Rondet has recently observed a family epidemic in which typhoid developed in a series of cases as the persons ate food prepared by the members of the family caring for the sick and those who had recovered from the disease months before. This explains the family epidemics among the poor. In wealthy households the cooks are responsible for the epi-

minally discovered that one of the employees had typhoid six months previously and was still harboring the bacilli. On her removal the epidemic ceased. No means have as yet been found to rid carriers of the bacilli, which find lodgment in the intestine, bile-ducks and gall-bladder. One specimen of bile showed 20,000,000 typhoid bacilli to the cubic centimetre. These facts have necessitated a considerable modification of the theory that all epidemics of typhoid fever are due to polluted drinking water. While there is no doubt that sewage-contaminated water has played and still plays an important part in the transmission of typhoid fever, there is no longer a tendency to minimize other causes. It has been noted in many communities that after an infected water supply has been purified or replaced by a purer source, the residuum of typhoid fever was still very great. In most cities of the United States, even after a pure water supply has been secured, the death rate has remained, according to Jordan, at least five or six times as high as in European cities of similar rank. This persistence is now explained by the typhoid bacilli carrier and by the important rôle that flies and other insects may perform in transmitting the disease. (See INSECTS AND THE PROPAGATION OF DISEASE.) Another explanation no doubt lies in the fact that a certain proportion of cases can be accounted for by milk infection and by the ingestion of sewage-infected shell fish. The problem of milk infection again reverts to the bacillus carrier, who by failure to cleanse his hands from his own fecal discharges before handling milk, infects in a peculiarly disgusting way the product under his care. The question is therefore one of hand disinfection, both in the dairy and in the kitchen.

TYRRELL, GEORGE. An English Roman Catholic priest of the Jesuit order, died July 15, 1909. He was born in Ireland and received the greater part of his education at Trinity College, Dublin. He was a Protestant in faith, but shortly after his graduation he became a Roman Catholic and took the vows of the Jesuit order. For twelve years prior to 1906 he was recognized as one of the most daring and brilliant of Jesuitical writers. In the latter year he published in an English journal an article which was deemed heretical by the Superiors in the Society. They demanded a recantation, and on his refusal Father Tyrrell was obliged to retire from the order. He was one of the bitterest assailants of the Pope's Encyclical on Modernism, and as a result of an adverse criticism published under his own name in the London *Times*, in 1907, he was excommunicated by order of the Pope.

TYSSSEN-AMHERST, WILLIAM AMHERST, Baron Amherst of Hackney. An English nobleman and bibliophile, died on January 16, 1909. He was born in 1835, and was educated at Eton and Christ Church, Oxford. He sat in the House of Commons from 1880 to 1892. In the latter year he was made a peer. He accumulated a magnificent library, which, in 1906, on account of financial difficulties he was obliged to sell. His remarkable collection of

variable corrections of tidal and Δg prior curiosities

UGANDA PROTECTORATE. A dependency of Great Britain in East Africa, including, besides Uganda proper, Unyoro, Busoga, and other native states westward to the Belgian Congo and northwards to the Egyptian Sudan. Area, 117,681 square miles; population variously estimated at from 2,000,000 to 4,000,000. Mengo is the native capital, but the British administration has its headquarters at Entebbe. The principal exports are ivory, skins, chillies, coffee, and cotton. The cotton export has increased from 858 cwt., valued at £1089, in 1905-6, to 23,051 cwt., valued at £41,225, in 1908-9. Imports and exports (1906-7), exclusive of goods in transit, specie, and government stores, £222,588 and £116,001, respectively, against £206,181 and £108,204 in 1905-6. Length of telegraph lines, 458 miles. Steamers ply the inland waters, and some connect with the railway of the East Africa Protectorate at Port Florence on Victoria Nyanza. Revenue and expenditure (1907), £96,772 and £191,502; grant-in-aid (1907-8) £85,000, 1908-9 £95,000. The present King (Kabaka) of Uganda, Daudi Chua (born 1895, grandson of the celebrated Mutesa, and son of Mwanga, whom he succeeded in 1897), is under a native council of regency. Governor and commander-in-chief (1909), vacant. Vigorous measures taken by the administration against the fatal sleeping-sickness, which threatened to depopulate the country, have resulted in a great reduction of the mortality; industrial conditions are improving and trade has increased.

UNCINARIASIS. See **HOOKWORM DISEASE.**

UNEMPLOYMENT. The extent and methods of relief of unemployment have received almost world-wide discussion during the past few years. In this country the distress due to unemployment was much less severe than during 1908. Reports of the Massachusetts and New York labor departments show that the extent of unemployment declined quite steadily during the year. In New York, reports from 192 representative trade unions with 89,000 members, about one-fourth the total trade-union membership for the State, showed a decline in the proportion of unemployed members from 29.3 per cent. in January to 17.4 per cent. in June. About 90 per cent. of this idleness was due to lack of work. In Massachusetts the proportion of unemployed in 777 unions with 105,000 members was 10.6 per cent. in November, 1908; 10.3 per cent. in January, 1909; 9.5 per cent. in March, 6.4 per cent. in June, and 4.8 in September. Slightly less than three-fourths of the idleness in September was due to lack of work or materials.

It is only very gradually that the American public has awakened to the importance of the problem of unemployment in connection with poverty and the various evils caused thereby. The opinion is still too widely held that unemployment, in the sense of enforced idleness for lack of work, is extensive only during periods of acute industrial depression. But Mr. Scott Nearing, from a study of data covering a con-

(See also the Proceedings of the American Statistical Association, September, 1909.)

ENGLAND. The problem has long been a matter of public concern in England, and an attempt was made in the Unemployed Workman's Act of 1905 to deal with the matter on a large and systematic basis. Since that date, however, industrial conditions have been such that acute distress from lack of work has been unavoidable. The winter of 1908-9 was especially memorable in this regard and indications were that the winter of 1909-10 would be little less so. On February 17 the Royal Commission on the Poor Laws and Relief of Distress issued a report on its three years of hearings and deliberations, a document destined to attain classical rank among public reports. (See **GREAT BRITAIN**, paragraphs on *History*.) The Local Government Board in September issued a report showing that the number of persons relieved under the act of 1905 during the year ending March 31, 1909, was 136,589, representing 376,043 dependents, as against 54,613, representing 150,971 dependents, in the previous year. The number in 1909 was 31 per 1000 of population of the areas concerned, as compared with 14 per 1000 in 1908. The loans for public relief works sanctioned by this Board from August 1, 1908, to January 9, 1909, were £2,328,247, as compared with £223,602 for the same period the previous year. At the meeting of the Trade Union Congress at Ipswich in September a resolution favoring public subsidies to trade unions granting unemployment benefits was defeated by 715,000 to 712,000 votes. In October the Central (Unemployed) Body for London reported that the cost of work done under public relief activities would have cost 30 per cent. less if done by ordinary labor. It recommended that the act of 1905 be repealed as inadequate; it favored a system of national labor exchanges, supplemented by plans for migration and emigration, training institutions and labor colonies. For an account of Mr. Winston Churchill's Labor Exchange measure, see **GREAT BRITAIN**, paragraphs on *History*.

In this connection it may be noted that the Poor Law Report attributed the success of the German labor exchanges to the assistance rendered by public bodies; the association on committees of both employers and employees; the strict exclusion of all relief work; postal, telegraph and telephone facilities; and preferential railway fares for men seeking work.

GERMANY. A conference of representatives of a number of principal cities held at Cologne was not able to reach any agreement as to the most practicable plan of municipal insurance against unemployment. The plans now in practice in continental cities are various, and experience with them has not been sufficiently long to make final judgment possible. The conference seemed to develop the opinion that the time is not yet ripe for a systematic solution of the problem.

NEW ZEALAND. In the fall a bill was introduced into the legislature providing for a system of unemployment insurance, based, like that introduced by Mr. Winston Churchill in the English House of Commons earlier in the year,

FRANCE. An International Conference on Unemployment is to be held at Paris in September, 1910. Its object is to establish closer relations among those interested in the fight against unemployment. It is probable that a permanent organization will be effected. Subjects for discussion are unemployment statistics, labor exchanges, and insurance against unemployment.

UNION COLLEGE. An institution of higher learning at Schenectady, N. Y., founded in 1795. The attendance in 1909 was 348 students and 32 members of the faculty. There were in the library 40,000 volumes. During the year \$110,000 was received in gifts. In the autumn of 1909 Charles Alexander Richmond, D. D., was inaugurated president, to succeed the Rev. G. Alexander, D. D. The total productive funds of the college amount to \$770,000 and the total income to \$85,000.

UNITARIANS. A religious denomination, the distinctive feature of which is the acceptance and adoption of the principles of freedom and progress in religion. In 1825 representatives of the Unitarian churches in the United States united in establishing the American Unitarian Association, which is the administrative body of the church, with headquarters at 25 Beacon Street, Boston, Mass. No official figures are gathered of the membership of the denomination, but in 1909 it was approximately as follows: Communicants, 70,542, churches, 461, and ministers, 541. There are a large number of conferences, unions, alliances and leagues organized for the purpose of distributing Unitarian literature and propagating Unitarian thought throughout the world. In Great Britain there are some 375 ministers and 372 congregations. The roll of membership in the Unitarian Church of Hungary is 80,000. Divinity schools are maintained at Cambridge, Mass., Meadville, Pa., and Berkeley, Cal. The denomination has eight academies under its auspices. Among the organizations are the National Conference of Unitarians and other Christian Churches, the Unitarian Sunday School Society, the Young People's Religious Union and many Unitarian clubs and ministerial associations. Active missionary work is carried on in many points among the Icelandic, Norwegian and Swedish immigrants in the United States. Field secretaries are employed in New England, New York, Chicago, Colorado and on the Pacific Coast. Among the Unitarian periodicals are the *Christian Register*, published in Boston, the *Unitarian*, published in New York, and the *Pacific Unitarian*, published in San Francisco. The president of the Association is Rev. Samuel Elliott, and the secretary, Rev. Lewis G. Wilson.

UNITED BRETHREN IN CHRIST. A religious denomination which had its beginning among the Germans of Pennsylvania under the preaching of Philip William Otterbein. The denomination held its first formal conference in Baltimore in 1789 and its first general conference at Frederick, Maryland, in 1800. The number of communicants in 1909 was 285,414. The organized churches numbered 3806, the itiner-

China and the Philippines, and also carries on domestic missions. The total expenditures for missions in 1909 amounted to \$114,154. The church devotes much attention to higher education. Among its institutions of higher learning are the following: Bonebrake Theological Seminary, Dayton, O.; Otterbein University, Westerville, O.; Lebanon Valley College, Annville, Pa.; Westfield College, Westfield, Ill.; Leander Clark College, Toledo, Iowa; Campbell College, Holton, Kan.; York College, York, Pa.; Shenandoah Collegiate Institute and School of Music, Dayton, Va.; Philomath College, Philomath, Ore., and Central University, Indianapolis, Ind.

UNITED EVANGELICAL CHURCH. A Protestant religious denomination, founded in 1894 as a result of the division in the Evangelical Association. In 1909 the church numbered 71,738 communicants, 243 local preachers, and 528 itinerant preachers. In the Sunday schools of the denomination were 96,816 scholars. The Church Extension Society has general charge of establishing new churches. Missions are sustained in China. The total missionary contributions in 1909 were \$123,744. The denomination maintains a publishing house at Harrisburg, Pa., where are published *The Evangelical*, the official organ of the church, and many other publications. Among the educational institutions under the auspices of the denomination are Albright College, Meyerstown, Pa.; Dallas College and La Creole Academy at Dallas, Oregon, and Western Union College at La Mars, Iowa. The denomination has two bishops. Its general form of government is that of the Methodist Church.

UNITED PRESBYTERIAN CHURCH. A religious denomination formed in Pittsburg, Pa., on May 26, 1858, by a union of the Associate and Associate Reformed churches. The membership in 1909 was 160,803, of whom 27,662 were in the foreign missionary fields. There were 1118 ministers and 1089 churches. In the 1375 Sabbath schools were 143,835 scholars and 14,391 officers and teachers. There were 970 Young People's Societies with a membership of 33,911. The contributions from the Sabbath schools for the year amounted to \$166,218. The total contributions for all purposes for the year amounted to \$2,455,035, of which \$846,842 was for salaries of ministers; \$862,380 for congregational purposes; \$541,855 for the boards of the church, and \$248,553 for general purposes. The church sustains six colleges in the United States, one in Assiut, Egypt, and one in the Punjab, India. There are theological seminaries at Allegheny, Pa., and Xenia, Ohio. The property value of its institutions is \$917,700. Missions are carried on in Egypt, India and the Sudan; there are missions also among the negroes in Virginia, Tennessee, Alabama and Mississippi. The leading papers of the denomination are the *United Presbyterian* and the *Christian Instructor*, and there are several other periodicals issued from the publishing house which is in Pittsburg, Pa.

UNITED STATES. The total area belonging to or under the jurisdiction of the United

Hawaiian Islands, 843; Porto Rico, 3,200; Panama Canal Zone, 474; Guam, 210; Tutuila Group, Samoa, 77. The total population, including Alaska and Hawaii, but excluding Porto Rico and the Philippines, was, according to the census of 1900, 76,303,387. According to the Federal estimate of 1909 the population of the entire territory of the United States was 88,566,034. The population of Continental United States was 88,262,446.

AGRICULTURE. The statistics in regard to agricultural products will be found in the article **AGRICULTURE** and under the respective heads of the various products. The agricultural production of the separate States will be found under the proper headings in these States.

INDUSTRIES. For a general discussion of the various industries, see **MINERAL PRODUCTION, IRON AND STEEL, COTTON, SUGAR, RAILWAYS, SHIPBUILDING, SILK, TEXTILE MANUFACTURING, BOOTS AND SHOES, LEATHER, STRIKES AND LOCKOUTS, TRUSTS, etc.**

FOREIGN COMMERCE. The foreign commerce of the United States in the calendar year 1909 exceeded in value that of any earlier year with the single exception of 1907. The imports were larger than in any previous year, while the exports fell slightly below those of 1906 and 1907.

The imports aggregated \$1,475,612,580 and the exports \$1,728,203,271, of which approximately \$25,000,000 consisted of foreign merchandise exported, and the remainder, \$1,700,743,038, of domestic products.

Imports free of duty were larger than in any earlier year in the history of our commerce and aggregated \$700,000,000, against a little over \$500,000,000 in 1908 and \$636,000,000 in 1907, the high-record year prior to 1909. Dutiable imports amounted in 1909 to about \$780,000,000, and were larger than in any preceding year, except 1907, when the total was \$787,000,000. This total of \$1,475,000,000 of imports in the calendar year exceeds by over \$50,000,000 the highest import record of any earlier year, that of 1907.

Of this \$1,475,000,000 of imports, about \$525,000,000 is raw material for use in manufacturing and \$260,000,000 partially manufactured material for further use in manufacturing; making the total value of manufacturers' materials imported nearly \$800,000,000, or more than half the entire imports of the year. The imports of the year, classified according to their prospective uses, were: Raw materials, for use in manufacturing, \$529,682,778; partially manufactured materials for further use in manufacturing, \$257,867,335; manufactures ready for consumption, \$342,895,720; foodstuffs in a crude condition, \$172,295,073; foodstuffs partly or wholly manufactured, \$162,135,053, and miscellaneous products, \$10,736,042. In each of these classes except finished manufactures the total of the year is larger than that of any earlier year, while in finished manufactures the record falls about \$40,000,000 below that of 1907, when the total value of finished manufactures imported was \$380,000,000. The trade with the non-contiguous territories of the United States for the year aggregated about \$172,000,000, of which about \$78,000,000 con-

tinued in greater value in any preceding year. From Alaska the shipments to the United States aggregated about \$13,500,000 and the shipments from the United States to Alaska, about \$17,750,000. From Hawaii the shipments to the United States amounted to about \$41,750,000, and the shipments from the United States to Hawaii about \$19,000,000. From Porto Rico the shipments to the United States were about \$27,000,000 and the shipments from the United States to that island, \$25,675,000. From the Philippine Islands the merchandise sent to the United States during the year aggregated about \$13,500,000, against a little over \$9,000,000 the year before, and the merchandise sent to those islands, \$14,000,000, against about \$10,000,000 in 1908.

The exports were \$1,728,203,271, against \$1,752,835,447 in 1908, \$1,923,000,000 in 1907, \$1,798,000,000 in 1906, and \$1,626,000,000 in 1905, having thus been exceeded by the export figures of only three years, 1906, 1907 and 1908.

Over half of the year's exports underwent a process of manufacture before leaving the country. The reports for the full year show \$467,945,050 worth of manufactures ready for consumption; \$253,199,100 worth of manufactures for further use in manufacturing, and of food-stuffs partly or wholly manufactured, \$285,067,172, the total of these three classes forming over 55 per cent. of the total exports of the year. The value of exports of raw material was reported for the year at \$571,868,668, and that of crude foodstuffs, \$114,883,247. In both classes of foodstuffs the total for the year is low, lower, indeed, than at any time in the last decade; while, on the other hand, raw materials for use in manufacturing show a larger total in value than in any earlier year, their unusually large value of exports being due, in part, however, to abnormally high prices of cotton, the chief factor in this group of "raw materials for use in manufacturing."

All the grand divisions and practically all of the important countries shared in the increased imports. From Europe the imports showed an increase from \$548,382,652 in 1908, to \$763,704,486 in 1909; from North America, an increase from \$224,623,181 to \$277,863,210; South America, from \$132,431,434 to \$193,202,131; Asia and Oceania, from \$195,283,552 to \$223,254,724; and those from Africa, an increase from \$15,153,268 to \$17,588,029. On the other side of the account, exports to Europe show a falling off of \$64,000,000, when compared with those of last year; North America, an increase of \$17,000,000; South America, an increase of \$4,000,000; Asia, a fall of \$17,000,000; Oceania, a decline of about half a million; and Africa, a decline of about one million dollars; exports to America, as a whole, thus showing an increase, and those to Europe, Asia, Oceania, and Africa, a decrease.

All of the principal ports share in the increase of imports, the Atlantic ports showing a gain from \$686,000,000 to \$943,000,000; the Gulf ports an increase from \$45,000,000 to \$53,000,000; the Mexican border ports, an increase from \$8,000,000 to \$15,000,000; the Pacific ports from \$62,000,000 to \$75,000,000; the northern

Gulf ports, a loss of \$1,300,000; the Mexican border ports a loss of about \$500,000; the Pacific ports a loss of \$22,000,000; and the northern border and Lake ports, a gain of \$24,000,000.

Trade between South America and the United States in 1908 exceeded all previous records, with a total of \$276,711,178, against \$200,029,069 in 1908, and \$129,000,000 in 1899. Of the total, \$193,202,131 is the total imports from, and \$83,509,047 that of exports to South America. Imports from South America in the calendar year 1909 showed an increase of nearly 40 per cent. over those of 1908, and the full year's record exceeded by \$25,000,000 that of 1906, until 1909 the banner year in exports from South America. The South American countries participating most largely in the import trade to the United States, in the order of importations, are Brazil, Argentina, Chile, Venezuela, Colombia, Peru, Uruguay, Ecuador, Dutch Guiana, British Guiana, French Guiana, Paraguay and Bolivia. Coffee is the largest item of importation from South America, the value imported in the first ten months of 1909 being nearly \$54,000,000, against \$45,000,000 in the same months during the preceding year. The articles next in importance are India rubber, \$32,000,000 in 1909, against \$17,000,000 in 1908; hides of cattle, \$13,000,000, compared with \$6,000,000 in 1908; wool, \$8,000,000, compared with \$3,500,000 in 1908; cacao and cocoa, over \$3,500,000, practically the same value as in 1908; goat skins, \$4,000,000, against less than \$3,000,000 in 1908; copper pigs, bars, etc., \$3,500,000, a decrease of about \$200,000, compared with 1908; copper ore and matte, \$2,000,000, compared with \$1,000,000 in 1908. South America furnished about eight-ninths of the coffee supply of the United States. The total imports of coffee into the country during the first ten months of 1909 were 845,000,000 pounds, of which 745,000,000 came from South America, Brazil's share alone being 649,000,000 pounds. Brazil is the largest single source of supply for rubber imported into the United States, furnishing nearly one-half of the 73,000,000 pounds imported in the first ten months of 1909, the remainder being chiefly from Mexico, Africa, and the East Indies. Exports to South America in 1909 approximated the high-record total of \$86,000,000, made in the calendar year 1907. Exports to Brazil increased from \$14,000,000 to \$16,000,000; those to Argentina, from \$28,000,000 to \$29,000,000; to Chile, from \$4,500,000 to \$5,500,000; to Uruguay, \$2,750,000 to \$3,333,333, and those to Venezuela, from \$2,000,000 to a little over \$2,000,000. Manufactures supply by far the larger proportion of exports to South America, while raw materials and foodstuffs supply most of the imports from that continent. Exports of illuminating oil to South America showed in the ten months of 1909 a total of \$6,000,000; boards, etc., \$5,750,000; agricultural implements, \$5,000,000; cotton cloth, scientific instruments, rails, wire and hardware, each about \$2,000,000; and naval stores, twine, sewing machines, upper leather, lubricating oil and lard, locomotives, cars and carriages, cottonseed oil, furniture, electrical

10, Feb., 1910.

The table below shows the principal articles of export and import of the fiscal years 1908-9:

**IMPORTS INTO, AND DOMESTIC EXPORTS FROM,
THE UNITED STATES OF PRINCIPAL ARTICLES
FOR THE FISCAL YEARS
1908 AND 1909**

	Imports		
	Articles	1908	1909
Chemicals, drugs and dyes	\$73,237,033	\$78,379,634	
Coffee	67,688,106	79,112,129	
Cotton, manufactures of	68,379,781	62,010,286

Wood, and manufactures of	81,521,305	67,867,932	

*Includes linters. †Not including corn oil cake.

INTERNAL COMMERCE. Domestic commerce on the Great Lakes during the calendar year 1909, as measured by the volume of freight shipped between domestic ports on the Great Lakes, aggregated 80,974,605 net tons. This tonnage, while about one-third larger than for the year before, is about 2½ million tons below the corresponding 1907 tonnage, the largest

total in the history of the lake trade, the above total, reported by the Bureau of Statistics of the Department of Commerce and Labor, does not comprise the entire volume of lake commerce, as it does not include the volume of exports to Canada nor the imports from Canada nor the movement between Canadian ports. Neither do these figures include the volume of the purely local movements within the limits of the ports proper. If the volume of these movements were included it is likely that the total lake commerce during the year would approximate, if not exceed, 90 million tons.

The iron-ore shipments by lake during the year, as reported to the Bureau, exclusive of about 400,000 gross tons exported to Canada, totaled 40,732,677 gross tons, compared with 24,939,185 gross tons in 1908 and 40,727,972 gross tons in 1907. The largest shipping ports in the order of their importance were Duluth, credited with 13,260,309 gross tons; Two Harbors, credited with \$8,905,608 gross tons; Superior, credited with 6,420,095 gross tons; Escanaba, credited with 5,533,608 gross tons; Ashland, credited with 3,638,849 gross tons; and Marquette and Presque Isle, credited with 2,884,241 gross tons.

Domestic grain shipments during the past season totaled 118,203,760 bushels, of which 56,114,633 bushels was wheat; 28,954,740 corn; 17,828,717 oats; 14,137,662 barley; and 1,167,988 bushels rye. As compared with corresponding shipments during the past season, the figures of wheat and rye show decreases and those of other grains slight increases. Over 87 per cent. of the annual wheat shipments proceeded from Duluth and Superior. The lake shipments for the past year of this article from Chicago, 5,855,300 bushels, were about one-third below the average for the preceding five years. Over 84 per cent. of the domestic lake shipments of corn proceeded from Chicago. Flaxseed shipments for the year, 9,883,432 bushels, were about 37 per cent. below those reported for 1908 and proceeded practically all from Duluth and Superior.

The lumber shipments for the year, 1,155,765 M. feet, fell about one-third below the average for the five-year period 1903-1907, notwithstanding the large demand for this material in the Middle West and in the East. Of the

total lumber shipped, about 54 per cent. proceeded from Lake Michigan ports, about 37 per cent. from Lake Superior ports, and the remainder from Lake Huron ports.

The vessel movement between domestic lake ports, as measured by the aggregate outbound vessel tonnage, 103,271,885 net tons, was larger than for any previous year, although the number of vessel departures, 73,104, has been exceeded during each year between 1905 and 1907. The average size of registered craft, as calculated from the tonnage figures for the year 1909, was 1413 net tons, compared with 1100 net tons in 1905 and 925 net tons in 1902.

The freight tonnage during the year reported for the Detroit River aggregated 62,247,670 net tons, compared with 46,946,884 net tons and 67,292,504 net tons reported for the 1908 and 1907 seasons. A 33 per cent. increase of the river movement for 1909, as compared with 1908, is thus seen to correspond to a 40 per cent. increase in the canal movement and a 34 per cent. increase in the total lake shipments. Of the total for the year, 44,404,299 net tons represented a southbound and 17,843,371 net tons a northbound movement. The 1909 vessel movement through the river during the past season comprised 21,531 vessels of 47,621,078 net tons register, compared with 18,212 vessels of 36,200,089 net tons register for the 1908 season and 23,721 vessels of 48,958,238 net tons for the 1907 season.

NAVIGATION. The shipping registered for foreign trade on June 30, 1909, consisted of 1633 vessels of 887,505 gross tons. These vessels, however, include a number which have outlived their usefulness, and others, which, though registered, are engaged in trades from which foreign ships are excluded. For effective competition in foreign trade any one of several of the great British and German steamship companies is better equipped than the entire steam fleet in that trade under the American flag. In the past year three of the American trans-Atlantic steamships built recently in the United States were transferred to the Belgian flag. At the beginning of the fiscal year 1909 there were only four American steamships regularly engaged in European trade, only five in trade with Asia, and none with South America below the Caribbean, or

age passengers to and from the United States during the first half of 1909, 143 were equipped with wireless telegraph installations. These carried about 174,000 passengers, of whom 147,000 were steerage passengers; 139 steamships not equipped carried about 6000 cabin and 55,000 steerage passengers. In the coastwise passenger trade all ocean steamers carrying 50 passengers or more over routes of 200 miles or more, with a capacity of 32,000 passengers, were equipped with wireless telegraph, while 70 with a capacity of 18,000 were not so equipped. Through the efforts of the Navy Department, the War Department, and private enterprise, the coasts of the mainland of the United States, Alaska, Hawaii, Porto Rico and the Canal Zone are now so provided with wireless shore stations that vessels at sea anywhere within 300 miles of the shore can communicate with the land as well as usually with other vessels. The Secretary of Commerce and Labor recommends the passage of a bill by Congress requiring wireless installation as a measure of safety on ocean passenger steamers carrying more than a given number of passengers over more than a given distance.

EDUCATION. See EDUCATION IN THE UNITED STATES; AGRICULTURAL EDUCATION; UNIVERSITIES AND COLLEGES and PROFESSIONAL SCHOOLS.

COINAGE. The following table indicates the amount and character of the coinage as used in the United States in the calendar years 1908 and 1909.

Population of the United States Dec. 31, 1909, estimated at 89,644,000; circulation per capita, \$34.83.

† For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets of the Government.

‡ This statement of money held in the Treasury as assets of the Government does not include deposits of public money in National Bank Depositories to the credit of the Treasurer of the United States, amounting to \$35,324,066.85.

NATIONAL DEBT. The amount and classification of the United States national debt at the end of the calendar years 1908 and 1909, were as follows:

	Dec. 31, 1908	Dec. 31, 1909
Interest-bearing debt at from 2 to 4 per cent. and redeemable from 1907 to 1925 inclusive.....	\$ 912,900,850.00	\$ 913,317,490.00
Debt on which interest has ceased since maturity.....	3,448,935.26	2,365,725.26
Debt bearing no interest.....	400,501,382.78	380,537,483.78
Gross debt	\$1,316,351,168.04	\$1,296,220,699.04
Cash balance	169,501,417.34	84,048,865.69
Net debt	\$1,147,349,750.70	\$1,212,171,833.35

ARMY

STRENGTH. The strength of the regular army on October 15, 1909, was 4209 officers and 71,840 enlisted men, making a total of 76,049, an increase during the year of 3421. These figures do not include 3485 men of the hospital service.

The geographical distribution of the regular army on October 15, 1909, is shown in the following table:

	Enlisted	Officers	men	Total
In the United States.....	3,273	56,008	59,281	
In Alaska	49	1,065	1,114	
In the Philippines	705	12,871	13,576	
In Porto Rico	29	578	607	
In Hawaii	57	1,179	1,236	
Troops en route and officers at other foreign stations.	96	139	235	
Total	4,209	71,840	76,049	

There were also in the service 157 officers and 5572 enlisted men of the Philippine Scouts. The authorized maximum strength on October 15, 1909, was 4431 officers and 78,778 enlisted men. This does not include 178 officers and 5731 enlisted men of the Philippine Scouts, or the Hospital Corps, which has an average strength of about 3500 men.

On June 30, 1909, there were 4048 commissioned officers on the active list of the regular army. Of these, 1079, including 63 chaplains, were general officers, or officers of the staff corps

and departments, and 2969 belonged to the line. An examination of the record of commissioned officers in the regular army shows that 43.36 per cent. of the officers on the active list on October 15, 1909, were graduates from the United States Military Academy; that 12.97 per cent. were appointed from the army and that 43.67 per cent. were appointed from civil life. Of those appointed from civil life 21.38 per cent. had prior service in the army and 22.29 had no such prior service. The Secretary of War in his annual report points out that more than one-third of the captains of the army were absent from their proper commands on detached duty on June 30, 1909. He recommends as a remedy for this condition an increase in the number of officers of the regular army and suggests that it might be well to modify the present law so as to authorize the Secretary of War in his discretion, when the necessities of the public service require it, to assign certain classes of retired officers to active service temporarily, provided their health and physical condition will permit of efficient performance of duty.

Eighty-eight officers were retired during the fiscal year ended June 30, 1909, 13 more than were retired during the preceding fiscal year. The total number of officers on the retired list on that date was 1000 as compared with 970 on the corresponding date of the previous year. Of the number retired during the fiscal year 1909, 51 were retired for disability, 18 on their own application, 17 by operation of law, having

reached the age limit, 1 after failure to pass second professional examination, and 1 under a special act of Congress. Of the 18 who were retired on their own application, 9 had been over 40 and 9 over 30 years in the service.

ENLISTMENTS. The total number of enlistments in the army during the fiscal year ended June 30, 1909, exclusive of the Hospital Corps and Philippine Scouts, was 31,057. Of this number, 9,042 were reënlistments and 22,015 were original enlistments. The percentage of native born white and colored among the original enlistments was 88. Of the 31,057 accepted applicants, 26,493 were native born, 4,105 were of foreign birth, 17 were Indians and 428 were born at Porto Rico. During the fiscal year 1,047 Filipinos were enlisted for the Philippine Scouts, as compared with 4,388 for the preceding fiscal year. These were all natives of the Philippine Islands. The recruiting of the army progressed so satisfactorily early in the year that the army was filled almost to its authorized enlisted strength. Active recruiting was suspended February 19, 1909, on which date orders were issued to accept only such applicants for enlistment in the line of the army as had had previous army service. Active recruiting in all branches of the army was resumed on July 20, 1909. The record for the year 1909 shows a slight increase in the number of desertions over the rate for the preceding year, notwithstanding renewed efforts looking to the apprehension and punishment of deserters. This increase was to be expected, however, because of the extraordinarily large number of recruits brought into the service during the year and because the greater number of desertions always occur in the earlier months of service. The Secretary of War states that beyond all doubt the mitigation of the punishment of deserters by department commanders and others, with or without the recommendation of courts martial, and the restoration of convicted deserters to duty, besides having a mischievous effect on the morale of the enlisted force, has a tendency to increase desertions.

LOSSES. The losses from all causes in the army, including the Philippine Scouts, during the fiscal year ended June 30, 1909, was 155 officers and 25,792 men. Of the officers 23 were killed in action or died of wounds, disease, etc., 36 resigned or were discharged, 7 were dismissed, 1 deserted and 88 retired. Of the enlisted men, 429 were killed in action or died of wounds, disease, etc., 12,903 were discharged upon expiration of term of service, 7,174 were discharged for disability by sentence of court martial or by order, 4,993 deserted and 293 were retired. Of the Philippine Scouts, 3 officers were killed in action, or died of wounds, disease, etc., 8 resigned or were discharged and 1 was dismissed. Of the enlisted men of the Philippine Scouts, 44 were killed in action, or died of wounds, disease, etc., 437 were discharged upon expiration of term of service, 262 were discharged for disability by sentence of court martial or by order, and 29 deserted.

DISCIPLINE. No serious breach of discipline occurred in the army during the year and upon the whole a creditable state of efficiency and discipline was maintained. The Inspector-General reports, however, that there is no doubt but that the discipline and efficiency of troops are lowered by the continued absence of so

many company officers and the frequent changes of company commanders. There was a considerable increase in the number of trials by courts martial, but the great mass of such trials was for minor offenses. The operations of the army during the year, save for a few sporadic cases in the Philippines, where occasional lawless acts committed by outlaw bands of Moros called for the use of small detachments of army troops to assist the civil authorities, were of an entirely peaceful nature.

The Secretary of War expresses the opinion that the entire absence of a merit system in the advancement in their calling of the officers of the army is not good for the efficiency of the organization. Except by detail to the Ordinance Department or to the lowest grade of the Judge-Advocate-General's Department or the General Staff, it is impossible to advance an officer a single step beyond his own place in his branch of the service, no matter how great his merit may be nor how mediocre those immediately above him, unless he is made a general officer. The Secretary of War asserts that there should be as a part of the merit system at least the elimination of the least efficient. A method of elimination designed to be effective is that of examination for promotion, but the experience of 19 years with it has shown that it does not work and that by it officers are not got rid of for mere inefficiency.

The Secretary of War recommends that the present test designed to demonstrate the physical condition of all field officers of the army, introduced in 1908, should be modified so as to provide for a certain number of miles of riding or walking each week to be certified by the officers on their monthly report. These tests at present consist of a horseback ride of not less than 30 miles a day for three days in succession, or a walking test of 50 miles in three consecutive days in a total of 20 hours.

MOBILE ARMY. The Secretary of War declares that the time has now arrived when a rational plan should be devised for coöperation between the regular army and the State militia with respect to a mobile army. For several years, and more particularly since 1903, the War Department and the National Guard organizations have been working together in great harmony and with increasing effectiveness towards this end. Joint camps of instruction and manœuvres have been held biennially in different parts of the country and have been a pronounced benefit to all the troops engaged. The participation of the National Guard in these manœuvres has given to the regular army an inestimable advantage not otherwise obtainable of experience in the manœuvring of large masses of men under conditions of service assimilated so far as practicable with the actual conditions when war is in progress. The National Guard in addition has had the opportunity to acquire military experience in associating with professional soldiers. The number of men in the regular army and National Guard combined participating in these different manœuvres has ranged from 30,000 to 50,000. The manœuvres in 1909 were carried on in the vicinity of Boston. The Secretary of War suggests that, in order to put into operation a plan for coöperation between the army and the militia, the United States should be divided into a number of territorial and tactical dis-

for instruction and tactical organization. It is proposed to submit such a plan of organization to the governors of the States, asking their assent thereto, as all this system, so far as the National Guard is concerned, must be voluntary. See **MILITIA**.

A board consisting of five infantry officers and the commanding officer of Rock Island Arsenal was convened at the Arsenal on April 28, 1909, for the purpose of considering the question of the equipment and load for the infantry soldier, and to decide upon the number, kind, and weight of the articles of equipment to be carried.

In March, 1909, a request was received from the Cuban government through the State Department for the detail of three officers from our army for duty with the Cuban army as instructors in their respective arms of the service. In accordance with this request Captain Frank Parker, Eleventh Cavalry; Captain G. G. Gatley, Third Field Artillery; and Captain Philip S. Golderman, Coast Artillery Corps, were ordered to Cuba for duty as requested.

FORTIFICATIONS. About 85 per cent. of the heavy guns and mortars and 75 per cent. of the rapid fire guns called for under the plan of the National Coast Defense Board have now been mounted. The armament of the seacoast fortifications, while not entirely completed, was, at the end of the fiscal year, in a very forward condition of effectiveness. Seventy per cent. of the total work required in Manila Bay and at Honolulu and Pearl Harbor has already been appropriated for. This includes provision for the greater part of the work in the Philippines and Hawaii. It is estimated that \$11,685,789 will be needed to complete the defenses of all the insular ports, divided as follows: \$6,700,455 for Guantanamo, Cuba, San Juan, Porto Rico, Kiska Island and Guam, and \$4,985,334 for the Philippines, Honolulu and Pearl Harbor.

WIRELESS TELEGRAPHY. The Secretary of War calls attention to the very unsatisfactory condition of affairs concerning international wireless telegraphy. As the United States has not given its adherence to the treaty signed at Berlin on November 3, 1906, in regard to the conduct of the international wireless telegraph business of the world, ships flying the American flag find themselves without standing in international wireless telegraphy, as none of the contracting countries is compelled to receive a telegram from the ship of a non-contracting country, and any coastal station in a foreign country may refuse transmission of a message to a station on shipboard subject to a non-contracting country. As a result of this condition, the United States army transport *Kilpatrick*, in a cruise from New York to Manila, February 17 to April 23, 1909, and returning May 15 to July 25, 1909, had great difficulty in communicating in different parts of the world and it is reported that in several instances, after ascertaining her nationality, messages were refused.

The army of Cuban pacification having ended its duties in Cuba, began the withdrawal of its troops about January 1, 1909, and this was concluded on April 1, 1909, when the last re-

States after a service of nearly two and a half years on the island.

BROWNSVILLE. Under the provisions of an act of Congress, March 3, 1909, a court of inquiry was appointed on April 7 to hear and report upon the charges and testimony relating to the shooting affray which took place in Brownsville, Texas, on the night of August 13 and 14, 1906. This court is to determine which soldiers and non-commissioned officers, if any, of the companies B, C, and D of the Twenty-fifth Infantry, who were discharged from military service as members of this regiment, November 9, 1906, are qualified for re-enlistment in the army of the United States. The detail for the court is: Lieutenant-General Samuel B. M. Young, retired; Major-General Joseph P. Sanger, retired; Brigadier-General John M. Wilson, retired; Brigadier-General Theodore Schwan, retired; Brigadier-General Butler D. Price, retired, as members, and Captain Charles R. Howland, Twenty-first Infantry, as recorder. The court held its first session May 4, 1909, at Washington, and since that date has held regular sessions and carefully considered the sworn statements hitherto made in the case as well as the reports and testimony given in the Congressional investigations.

EXPENDITURES. The total expenditures of the army for the fiscal year ended June 30, 1909, was \$153,543,858. Of this sum, \$1,984,559 was expended for civil establishment; \$97,125,219 for the military establishment; \$12,242,724 for military public works, and \$35,351,114 for civil public works. For miscellaneous expenses there was expended \$6,840,240. The estimates for the fiscal year ending June 30, 1910, were \$189,755,039 and the appropriations made for that year were \$155,315,491.

NAVY

On March 4 George von L. Meyer became Secretary of the Navy, succeeding Truman L. Newberry, who had been Secretary since December 1, 1908.

The following table shows the strength of the United States Navy and the number of vessels and tonnage of 1000 or more tons, and of torpedo boats of more than 50 tons on November 1, 1909:

	Number	Tons
Battleships (10,000 tons and over)...	31	449,796
Coast-defense vessels.....	6	23,299
Armored cruisers	12	157,445
Cruisers above 6,000 tons	5	43,500
Cruisers 6,000 to 3,000 tons	17	61,124
Cruisers 3,000 to 1,000 tons	13	16,688
Torpedo-boat destroyers	36	21,300
Torpedo boats	30	5,177
Submarines	27	7,313
Total	177	785,945

BUREAU REORGANIZATION. The confusion and lack of efficiency as a result of the system of bureaus having direction of the various departments of the navy have given rise to attempts at bureau reorganization which shall obviate these drawbacks and give to the Sec-

retary of the Navy real power over all the bureaus which are nominally under his control. A plan of reorganization was undertaken by Mr. Newberry in 1908. This plan contemplated the increase in the membership of the General Board and of the Board of Construction, and provided for greater coöperation between the members. The navy regulations were amended so as to re-distribute the work of battleship designing in such a way as to avoid archaic and unbusinesslike methods. Some details of this plan met with severe criticism and on April 17 a pamphlet was published containing a criticism of these plans, which had resulted from the meeting of officers held at the Philadelphia Navy Yard. These officers claimed that the subject of the naval administration in general had received but slight attention and study from the great majority of the officials of the navy and that the recent changes in navy yard administration were probably known in detail to but few officers and were thoroughly understood by but a small percentage of these. They advocated the forming of an association, the object and efficiency of which would be to collect, collate, study and disseminate information regarding existing and possible systems of naval administration. The officers criticised severely the disadvantages of Secretary Newberry's proposed plan compared with the present plan of administration. This pamphlet was suppressed by the Navy Department, but it resulted in making public criticisms of Secretary Newberry's scheme from officers of the navy, including Admiral George W. Melville.

Mr. Meyer in his annual report, after reviewing the history of the formation of the bureaus, outlines a general plan for their reorganization. He stated that the business administration of the Navy Department logically divides itself into groups under personnel, material, and the operations or management of the personnel and material. The personnel includes the Bureaus of Navigation, Medicine and Surgery, and the Marine Corps. Material belongs to the Bureaus of Construction and Repair, Ordnance, Equipment, Steam Engineering, and Supplies and Accounts. Public works are the province of the Bureau of Yards and Docks. He points out that inspection of the fleet and its adjuncts, the navy yards and other shore stations has not been made by any departmental inspection reporting directly to the Secretary, and that the direction of the fleet, its operation, and its preparedness for war have been carried out without adequate methods. While the General Board has proved useful it has been without responsibility for carrying out his recommendations. The Bureau of Navigation, without specific authority over the other bureaus and with its own duties to occupy it, has only in part supplied the lack of suitable machinery for directing the operations of the fleet and its preparedness for war. On account of the growth of the navy and the increasing amount of business the different bureau chiefs have been necessarily engrossed in the details of their own duties; with the complexity and conflicting interests involved in the creation and maintenance of a modern fleet, they have at times failed to agree on matters where the field of each has overlapped. In this and similar situations the Secretary is without expert responsible advice or aid in making his decisions,

and moreover is not kept properly informed as to what is going on in the logical divisions of business of the Navy Department.

To effect the principal changes found necessary the Secretary recommends that the Bureau of Equipment be abolished and that the Secretary be authorized to distribute its duties among other bureaus. The other bureaus are to be continued in full effect. To supply the information and responsible advice which the Secretary lacks at present, the Department has decided to detail officers of rank specially fitted by experience and of recognized ability in their several fields as aides for special branches of effort and study. The officers selected will, so far as practicable, be flag officers, who will each keep closely informed of the work of the department in his particular division and will advise the Secretary concerning it. The aide for operations will advise the Secretary as to strategic and tactical matters in conjunction with the General Board and also advise regarding the movements and dispositions of naval vessels. The aide for personnel will advise the Secretary on matters which fall under the Bureau of Navigation, the Bureau of Medicine and Surgery, the office of the Judge-Advocate-General and the naval examining and retiring boards. He will also have cognizance of matters affecting the naval militia. The aide for material will advise the Secretary generally on matters concerning the construction, arming, equipment and supply of naval vessels and the management of naval yards. The aide for inspection will advise on all inspections ashore and afloat coming under the board of inspection and survey for ships, the board of inspection for shore stations, and the special inspecting officers. With the assistance of these aides the Secretary is provided with a minimum number of advisers corresponding to the natural grand divisions of the department, the object being to arrange the duties so that each aide will make himself responsible to the Secretary for the advice given in matters pertaining to his own duties. Thus the Secretary will be able to keep in closer touch with the business of the navy, and will aim to produce more economical administration with greater efficiency.

The matter of navy yard administration is one of the most important under the direction of the Secretary of War, and in his report he states that some extension and modification of the existing system is necessary for maintaining the preparedness of the fleet in the most economical and efficient manner. The consolidation plan is to be, in general, maintained, but certain changes are to be made. The machinery and the hull divisions in the navy yards were separated in July, 1909, and the machinery division was placed under the engineer officer. The results were found favorable and hereafter the work of the navy yards will be carried on in two divisions of manufacturing and repair, each under its own manager, namely a hull division and a machinery division. It is also the department's intention to require that the commandants and captains of navy yards, ordered to navy yard service, shall be specially qualified and shall have had previous training and experience and that their tenure of duty shall be long enough to produce continuous efficient administration; at the same time, of-

as far as possible, to concentrate each class of work where it can be done most economically and effectively. At present all ordnance is manufactured at the Washington Navy Yard, and all anchors, chain and rope at Boston. A new system of accounting has also been introduced. (The general plan outlined above went into effect on December 1.)

Secretary Newberry had issued an order closing certain of the southern navy yards. At the beginning of the present administration this order was suspended. It was not considered wise that the government should give up sites in which large expenditures have been made until after the opening of the Panama Canal, when it can be definitely demonstrated which are likely to be of the greatest value. The Navy Department proposes in the near future to take up the question of the importance of establishing navy yards in special localities, and the necessity of extending or curtailing the different navy yards, with a due regard for the interests involved and the probable needs of the future from a strategic point of view.

INCREASE OF THE NAVY. In order to keep the appropriations for the Navy Department within the economical limit set for the government, the Secretary of War recommends the new construction of only two battleships and one repair ship. The battleships asked are recommended to be of the all-big-gun type. They will complete the squadron of eight vessels of this general class, the others being the *North Dakota*, *Delaware*, *Florida*, *Utah*, *Arkansas* and *Wyoming*. There were at the end of the fiscal year 1909 six battleships of the Dreadnaught type building or authorized, together with 19 destroyers and 20 submarines. Contracts were awarded to the New York Shipbuilding Company for the construction of two battleships, the *Wyoming* and *Arkansas*. These vessels are to cost \$4,675,000 each. Contracts were also awarded for the construction of six torpedo-boat destroyers, for one steam collier, for one fleet collier, for one ammunition lighter, and for seven submarine torpedo boats.

EXPENDITURES. The total expenditure for the navy for the fiscal year 1909 was \$120,396,323. Of this \$20,109,957 was for new construction. The amount appropriated for expenses for 1910 was \$136,035,199. Of this sum, \$38,819,595 was for new construction.

PERSONNEL. The Secretary of the Navy in his annual report points out the urgent need for legislation to improve the conditions which have existed for some years and still exist in the higher grades of the line of the navy. The senior officers of the navy, he says, are too old for the responsibilities and the arduous duty required in a modern battleship. They are much older than similar officers in the other principal navies of the world. Not only is this the case but flag officers arrive at the grade of rear-admirals so late that even those of longest possible service do not get adequate training as subordinate flag officers before receiving the chief command. The average age of the rear-admirals who were on the battleship fleet on the cruise around the world in 1908 was about 60 years, and of the captains about 56 years.

right arm of defense. The Navy Department has undertaken a comprehensive plan for the reorganization of the personnel of the navy and this will be submitted to Congress for action.

The cruise around the world increased the enlistments of men and enabled the Bureau of Navigation to recruit the enlisted force up to practically its full strength. There was a heavy decrease in the percentage of desertions, which dropped from 9 to 5½ per cent. during 1909.

NAVAL RESERVE AND MILITIA. The Secretary of the Navy points out in his annual report that the United States has no other naval reserve than the officers and men of the Revenue Cutter Service, and the officers and men of the naval militia of the several States. There should be, he says, a naval reserve composed of men whose occupations in civil life or whose inclinations and experience find some counterpart in naval life. Such men exist in the fishing fleets and in the vessels engaged on the Great Lakes and in coastwise traffic. Many men whose occupations are on shore would be available as engineers, firemen, and coal passers, with a training partly accomplished by their everyday labor. Officers of the naval reserve could be obtained in the same way and their positions established by examination. Recommendation for the legal establishment of a naval reserve of officers and men is to be made to Congress.

There are about 6000 naval militia organized by the different States bordering on the sea and the Great Lakes. These small groups while generally efficient are under no central control or training. The formation of a national naval militia on the lines of the land militia is essential, and legislation is required to accomplish this. It is estimated that about 1000 officers and 10,000 men will be needed for the war duties of an adequate naval militia. These duties comprise the manning of the naval patrol system and coast signal stations and the auxiliary vessels and harbor-defense vessels on the coast. Certain of the militia organizations were sent during the year on the battleships of the Atlantic Fleet for the purpose of training them with the best material and bringing them into closer touch with the navy. The results of this were excellent. The General Board is considering the question of the training of the naval militia, and its report will be used by the department in formulating recommendations for legislation.

RETURN OF THE ATLANTIC FLEET. The return of the Atlantic Fleet from its world cruise on February 22, 1909, was an event of great interest to the nation and the navy. This long voyage was successful in every respect. While the fleet was entering the Suez Canal it was received of the earthquake in Sicily thereby giving the United States the opportunity to show its friendship to Italy and its interest in the cause of humanity by giving swift aid to the sufferers. The *Connecticut*, *Illinois* and *Culgoa* were at once dispatched to Messina. The crew of the *Illinois* recovered the bodies of the American Consul and his wife who had been entombed in the ruins. The *Scorpion*, the section ship at Constantinople, and the *Cadet*, a

refrigerator ship fitted out in New York, were hurried to Messina to relieve the *Illinois* and *Connecticut*, which continued on their course. The benefits of this cruise around the world to both the officers and enlisted men are in the increase in efficiency and economy in steaming, the lessons that have been learned in keeping the vessels self-sustaining, the training in holding vessels accurately in formation and in battle exercises and the great improvement in target practice. The cruise also developed the desirability of certain alterations, especially the removal of unnecessary and unused top hamper, and the substitution of the skeleton fire-control towers for military masts. These alterations were at once made.

INSULAR NAVAL STATIONS. Owing to changed conditions the differences of opinion which have hitherto existed in regard to a naval base in the Philippine Islands have been entirely overcome and a joint board has made a report recommending that the United States maintain a small docking and repair station at Olongapa in the Philippine Islands, but that the main naval base in the Pacific Ocean should be established at Pearl Harbor, Hawaii. Operations at Guantanamo, Cuba, were obliged to cease as a result of lack of funds to continue the building up of this important insular station. The naval base at Pearl Harbor was started during the year and the building up of this important station will be rapidly carried on.

MARINES. On November 12, 1908, an order was signed by President Roosevelt withdrawing marines from duty on board vessels of the navy, and they were assigned, first, to garrison the different navy yards and different naval stations; second, to furnish the first line of the mobile defenses of naval bases and naval stations beyond the continental limits of the United States; third, to man such naval stations and to aid in manning, if necessary, such other defenses or naval bases and naval stations beyond the continental limits of the United States; fourth, to garrison the Isthmian Canal Zone, Panama; fifth, to furnish such garrisons and expeditionary forces for duty beyond the seas as may be necessary in time of peace. This order gave rise to much dissatisfaction, and as a result the Navy Appropriation bill, passed in February, contained a provision replacing the marines on shipboard from where they were removed and assigned to land duty by the President's order, and on March 26 the marines were ordered restored to the navy under former conditions. As a result of the disturbances in Nicaragua, which resulted in the death of two American citizens, a large body of marines on different vessels were hurried to both sides of the Isthmus of Panama.

RECOMMENDATIONS. The Secretary of War recommends legislation which will provide for a crypt or mausoleum in which will be interred the remains of Paul Jones. He recommends also a provision by which commissioned and warrant officers of the navy may receive medals of honor. He recommends an amendment permitting aliens who are serving or have served in the navy or marine corps to acquire citizenship.

POST-OFFICE

On February 4, Frank H. Hitchcock became Postmaster-General, succeeding George

von L. Meyer. The receipts of the Post-Office Department for the fiscal year ending June 30, 1909, were \$203,562,383, as compared with the fiscal year previous of receipts of \$191,478,663. The expenditures amounted to \$220,417,698, leaving a deficit of \$17,441,719. The bulk of the receipts was from the sales of stamps, stamped envelopes, newspaper wrappers and postal cards. These amounted to \$184,987,815. The second-class postage receipts were \$7,236,058, and from the sale of money orders, \$3,417,625. The chief expenditures were, for transportation of mails on railroads, \$45,054,578; for rural delivery, \$35,462,164; for compensation to assistant postmasters and clerks in post-offices, \$34,853,764; for city delivery, \$29,780,319; for compensation to postmasters, \$26,569,892; for railway mail service, \$18,352,674. The Postmaster-General in his annual report makes an examination into the reason for the deficit. He finds that the two great sources of loss to the postal revenues are second-class matter and rural delivery. The loss on second-class matter has been increasing for several years until it now amounts to more than \$64,000,000. The loss from rural delivery reaches nearly \$28,000,000 a year. The deficit in 1909 was increased by the falling off in business as a result of the financial depression. The Postmaster-General states that measures have been adopted in conformity with President Taft's policy of retrenchment and that these measures are being put into effect with substantial results. As a result of the investigation made during 1907-8, it was possible in 1909 to show the profit or loss chargeable in 1908 to the handling of the several classes of mail and to the conduct of the registry, special delivery and money order services. The most striking fact disclosed by the statistics gathered for this investigation was the tremendous loss on account of the second-class mail, which includes the magazines, newspapers, and other periodical publications. While this class of mail provides a revenue of little more than one cent a pound, the cost to the government of its handling and transportation averages 9.23 cents a pound. The growth in the quantity of second-class matter sent through the mails has been extraordinary in recent years. It amounted in 1909 to over 700,000,000 pounds. The loss on second-class matter was greater in 1908 than the profits on all classes of mail combined, and it exceeded the total amount paid the railways for mail transportation. Magazines and other periodical publications, exclusive of daily newspapers, comprise about 60 per cent. of the second-class mail, the magazines alone forming about 20 per cent. While the average haul of magazines proper is over 1000 miles and that of other classes of periodicals, not including daily newspapers, ranges from 550 to over 1100 miles, the haul of daily newspapers, which comprise about 40 per cent. of the second-class mail matter, averages less than 300 miles. The Postmaster-General states that in view of this condition, the question naturally arises, how far the length of haul should be regarded in fixing rates of postage for second-class matter. He mentions three possible plans for reducing the expense of carrying this matter by the government. The first is that magazines and periodicals be charged a higher rate of postage than newspapers; the second, the establishment of a zone system under

ter printed for advertising purposes, a higher rate to be charged on the latter. Whatever plan is adopted the Postmaster-General declares that some substantial advance in the postage rate on such material should be made in order to reduce the tremendous losses the government revenues are now suffering from these sources. He appointed in the early part of 1909 a special committee of departmental officers qualified to deal with the subject, who should review the information collected in the various prior investigations, and if possible devise a practical method of reducing, without injury to the public or unfairness to the publishers, the enormous losses chargeable to this class of mail. The reports of this committee are to be submitted to Congress as a guide to possible legislation.

RURAL FREE DELIVERY. On June 30, 1909, 40,628 rural routes were in operation. The expenditures on account of the rural service for the fiscal year ended on that date were \$35,661,034. Compared with the previous year there was an increase of 1351 routes and \$1,289,095 in expenses. The rural carriers handled in 1909 approximately 2,723,262,000 pieces of mail and the average monthly number of pieces handled per route was 5608. The rapid growth of the rural service has no precedent in the history of the postal establishment. It has grown in the last 12 years from 82 to 40,628 routes with an increase in annual expenditure from \$1480 to \$35,661,034.

POST-OFFICES AND POSTMASTERS. There were in the United States on June 30, 1909, 60,144 post-offices, 4888 stations and branches, and 50,043 money-order offices. The value of the domestic money orders issued was \$491,074,844, and international, \$76,754,802. The policy of reappointment of presidential postmasters who have proved their efficiency, and in retaining postmasters in offices of the fourth class so long as they render satisfactory service, has had a decidedly beneficial effect. The policy involves the requirement that the postmaster shall give his personal attention to the duties of his office, and insure his cooperation with the Department in improving the service.

The Postmaster-General recommends amendments to the existing statute providing for the advancement of offices to the presidential class. He recommends also that postal employees receive an annual leave of absence of 30 days. In regard to second-class mail he recommends the enactment of a provision excluding sample copies from the pound rate privileges, and the passage of measures to discourage the practice of padding subscription lists by mailing publications to addresses which are known to be undeliverable. He recommends that the section passed in May, 1908, and not retained in the penal code adopted March 4, 1909, excluding from the mails, matter of a character to incite arson, murder or assassinations be reenacted.

PENSIONS

The total number of pensioners on the rolls on June 30, 1909, was 946,104, as compared with 951,687 on the rolls on June

of the year was 593,961, a decrease of 27,094 during the year. The number of survivors of the Civil War whose names were dropped from the roll on account of death during the year was 32,831. There were on the rolls on June 30, 1909, one pensioner of the Revolutionary War, a daughter; 395 widows of pensioners of the War of 1812; 1744 survivors and 2881 widows of Indian wars; 2459 survivors and 6633 widows of the War with Mexico; 21,967 invalids of the War with Spain; and 1159 widows, 12,426 invalids and 2648 widows in the regular establishment. The total disbursements for pensions during the year was \$161,973,703. The total expenditures including cost of maintenance and expenditures of the Bureau, \$164,828,287. The amount paid for pensions in the fiscal year 1909 was the largest ever disbursed for pensions in one year. The increase in the disbursements was, to a great extent, due to the large number of pensioners placed on the roll under the act of February 8, 1907, granting \$12, \$14, and \$20 per month to survivors of the War with Mexico and the Civil War on reaching the ages of 62, 70 and 75 respectively. The increase is also due in part to pensions granted under the second section of the act of April 19, 1908, to widows of persons who served in the Civil War without regard to their pecuniary condition, and the increase from \$8 to \$12 per month of the rate of pension of certain widows, minor children and helpless minors granted by the first section of this act. The total number of pension certificates issued during the year was 123,742, as compared with 328,676 issued in 1907. The number issued in 1909 was the smallest issued in any year since 1903. During the second session of the Sixtieth Congress 3021 pensions were granted by special acts. During the fiscal year ten original military bounty-land warrants were issued, granting 1560 acres of land. The total number of bounty-land warrants issued to June 30, 1909, was 598,678, amounting to \$68,790,510.

The only pensioner of the Revolutionary War was Mrs. Phebe M. Palmetter, aged 88 years, of Brookfield, N. Y. She was pensioned by a special act of Congress as the daughter of Jonathan Wooley, who served in a New Hampshire company. The last surviving pensioned soldier of the War of 1812 was Hiram Cronk, of Ava, N. Y., who died May 13, 1908, aged 105 years and 16 days.

During the year 177,581 pension claims were adjudicated, of which 123,610 were admitted, 52,199 rejected and 1772 approved for allowance in which no certificates were issued because they would not have been of benefit to the applicants. The largest number of beneficiaries of any State was in Ohio, where 92,507 persons drew pensions from the government. Pennsylvania is second, with 92,066, New York third, 83,394, Illinois fourth, 66,402, and Indiana fifth, 57,042. There were 2631 pensioners who were residents of Canada, 580 of Germany, 460 of Ireland, 371 of England and 160 of Mexico. A total of 5047 pensioners were residents of foreign countries and the amount paid to them was \$863,607.

The total amount of pensions paid to soldiers, sailors and marines, their widows, minor children and dependent relatives on account of military and naval service since the foundation of the government is as follows: War of the Revolution (estimated), \$70,000,000; War of 1812 (service pensions), \$45,757,396; Indian Wars (service pensions), \$9,995,609; War with Mexico (service pensions), \$42,492,784; Civil War, \$3,686,461,840; War with Spain and insurrection in the Philippine Islands, \$26,383,805; regular establishment, \$15,507,028; unclassified, \$16,484,049, or a total of \$3,913,082,513. The Commissioner of Pensions, Vespasian Warner, resigned from office in November, 1909, and was succeeded by James L. Davenport.

PATENTS

There were during the fiscal year ending June 30, 1909, 62,800 applications for registration of trade-marks; 1001 applications for patents for designs; 192 applications for reissues of patents; 7509 applications for registration of trade-marks; 1001 applications for registration of labels; and 338 applications for registration of prints, or a total of 73,026. The number of patents granted in trade-marks, labels and prints registered in 1909 was 40,772. The applications for patents for inventions increased over 1908 by between 4000 and 5000 cases. The Commissioner of Patents in his annual report points out the necessity of provision for a new building in which ample room will be afforded properly and promptly to transact the business of the office. The present facilities for the work are entirely inadequate. Provision was made by Congress for the additional office of First Assistant Commissioner of Patents beginning July 1, 1909. During 1909 a treaty was negotiated with Germany which confers great benefits upon the American inventor. The patent laws of nearly all the foreign countries contain a clause providing that if an invention is not "worked," that is, manufactured or practiced in such a country within a certain period ranging from two to four years, the patent may be annulled. This treaty with Germany provides that the working of a patent in one of the contracting countries will have the same force and effect, so far as avoiding the revocation of the patent is concerned, as if it had been worked in the country in which the patent was granted. This treaty practically assures to American inventors the protection of their rights in Germany during the full period for which the German patent is issued, contingent only on the working of the invention in one of the two countries.

Congress at its last session appropriated the sum of \$10,000 to defray the expenses of the meeting of the International Union for the Protection of Industrial Property, to be held in Bern, Switzerland, probably in May, 1911. The meeting of this union is most important to the interests of American inventors and manufacturers. The 21 nations which are adherents to this union will be represented by delegates having full power to negotiate agreements in respect to reciprocal protection of patents, designs, trade-marks, and industrial models, which when ratified by their respective governments would have the force of treaties.

NATURALIZATION

Declarations of intention to the number of 143,112 were filed with the clerks of courts exercising naturalization jurisdiction during the fiscal year 1909. This was an increase of 6467 over the number applying in 1908. Of those filed in 1909, 282 were by native-born Americans, who, having renounced their allegiance to the United States, returned and took the preliminary step towards resuming their original status. There was a decrease of 1700 in the number of petitions for naturalization filed, the totals for 1908 and 1909 being respectively 43,878, and 42,178. The number of certificates of naturalization issued, however, shows an increase of 11,820, the total in 1909 being 37,377, against 25,517 in 1908, while there was an increase of practically 100 per cent. of the number of petitioners who were denied citizenship. The denials in most instances were based rather on the failures of petitioners to comply with the requirements of the law than of the lack of necessary qualifications. During the year the number of courts exercising naturalization jurisdiction increased 150 or from 2244 to 2394. This increase was confined altogether to State courts.

Under the criminal provisions of the naturalization law, prosecutions were instituted in 35 cases, with the result that in 7 cases fines were imposed, and in 6 jail sentences were inflicted, while 5 resulted in acquittal and 17 were pending at the close of the year.

CENSUS BUREAU

During 1909 the Bureau of the Census issued 27 publications, 10 being reports of some magnitude and 17 bulletins and pamphlets. The Bureau issues annually statistics on the following subjects: Official statistics of cities containing over 30,000 inhabitants; statistics of ginning, consumption and stocks of cotton; vital statistics of those States and cities which maintain a system of registration of births and deaths, and statistics of forest products, collected and published in cooperation with the forest service of the Department of Agriculture. During the year a census of religious bodies relating to the year 1906 was completed and the results published in a bulletin. The Bureau also completed an investigation of electrical industries covering the year 1907. A special report was also issued on industrial districts and a report entitled *A Century of Population Growth from the First Census of the United States to the Twelfth, 1790 to 1900*. This report contains a complete analysis of the available data regarding the first census of the United States, much of which has not been published hitherto. The Bureau also nearly completed the work of the fisheries statistics and published preliminary bulletins covering several of the States. Much of the time of the census employees during the year was devoted to preparations for the 13th census. The creation of a permanent Census Bureau has proved a great advantage in facilitating such preparation and avoiding the excessive haste which was necessary formerly when the entire census force had to be organized anew between the time of the adoption of the Census act of Congress and the actual enumeration. On May 26, S. N. D. North, Director of the Census, resigned his position and was succeeded

assumed charge of the Bureau and on it was asserted by administrative officials that Mr. North endeavored to exercise a degree of independence which, while not lessening the responsibility of the Department of Commerce and Labor for acts done by the Director of the Census, virtually nullified the Secretary's authority over the Census Bureau. The immediate cause of Mr. North's resignation was a report made to President Taft by Secretary Nagel in regard to conditions in the Census Bureau and the attitude assumed by Director North toward Mr. Nagel.

On July 2, Congress passed bills for the taking of the census of 1910. One bill appropriates \$10,000,000 for the taking of the census, while another presents the qualifications of the census takers. In the winter of 1908 President Roosevelt vetoed a bill which provided for the taking of the census, but which omitted to provide for the appointment of the clerks and other employees by competitive examination under the Civil Service. In the bills passed this defect was remedied. In order that the employees may not be composed disproportionately of persons who live in the District of Columbia, it was provided that the appointees selected for the work must actually have lived for at least one year in the State from which they are named. In a letter to Secretary Nagel on August 15, President Taft showed his intention of keeping the work of gathering the census from the hands of political spoilsmen. He declared that "any man engaged in taking the 13th census who engages in politics in any way will immediately be dismissed from the service." The President ordered the Secretary of Commerce and Labor and the Director of the Census to embody in the regulations governing the taking of the census, rules carrying this condition into effect. While 300 or more supervisors will have the appointment of the enumerators, these supervisors themselves are to be appointed on the recommendation of United States Senators and Representatives, and it was the intention of the President that the personal qualifications of these appointees be carefully inquired into. Neither supervisors nor enumerators must serve on a committee, make political addresses, solicit funds or in any way use their influence for a party or a national, State or local candidate in any election. The penalty for the infringement of this rule is instant dismissal.

The principal respects in which the 13th Census act differs from that provided for the 12th census are as follows: First, the present act provides for a census of mining statistics in 1910, while a census of mining was not taken in 1900 but was taken in 1902; second, the 13th Census act makes no provision for special statistics of births and deaths during the census year as was required at the 12th census. It had been found impossible to secure actual statistics of births and deaths by census methods, and the Census Bureau now confines itself to the publication of annual statistics covering those areas in which State and political governments maintain an efficient registration system; third, the census of population is to be taken in April instead of June as for-

cerning manufactures covered the fiscal year of each concern ending next preceding June 1, 1900, but practically in most cases covered the year 1899; fifth, the act provides for the appointment of a temporary clerical force necessary for census work after Civil Service examination, which was not required by previous acts.

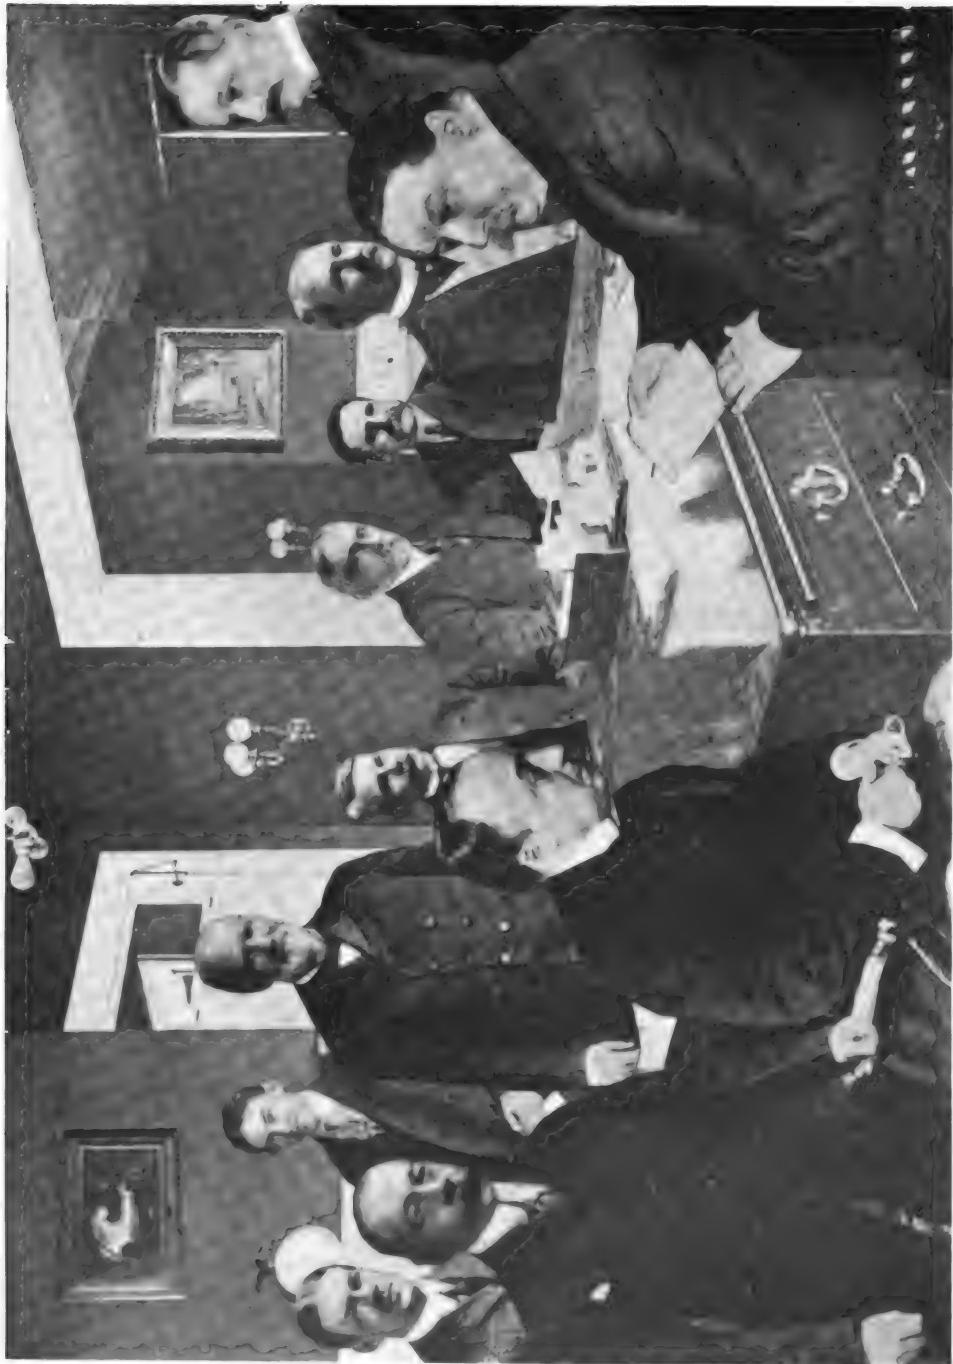

During the fiscal year the Bureau completed its designs and models for a punching machine and a tabulating machine to be used for handling the population statistics in 1910 and contracts were entered into for 300 of the punching and 100 of the tabulating machines. These machines will enable each operator to turn out a much larger number of cards than was possible during the 12th census.

CABINET

The election of Elihu Root, Secretary of State, at the beginning of the year, to the United States Senate by the New York Legislature (see NEW YORK) made the position vacant. On January 25, President Roosevelt appointed Robert Bacon, Assistant Secretary of State under Secretary Root, to fill the office for the remainder of the administration. Mr. Bacon was sworn into office on January 27 and John Callan O'Laughlin was sworn in as Assistant Secretary of State. These officials served until the incoming of President Taft's cabinet.

President Taft did not complete the selection of the members of his Cabinet until late in February. The Cabinet officers as finally chosen were as follows: Secretary of State, Philander Chase Knox, of Pennsylvania; Secretary of the Treasury, Franklin MacVeagh, of Illinois; Secretary of War, J. M. Dickinson of Washington; Secretary of the Navy, George von L. Meyer, of Massachusetts; Secretary of the Interior, Richard A. Ballinger, of Washington; Secretary of Agriculture, James Wilson, of Iowa; Postmaster-General, Frank H. Hitchcock, of Ohio; Attorney-General, George W. Wickesham, of New York; and Secretary of Commerce and Labor, Charles Nagel, of Missouri.

Shortly after Senator Knox had consented to become Secretary of State in President Taft's Cabinet, it was discovered that by a provision of the constitution he was ineligible for the office. This provision provides that "no Senator or Representative shall during the time for which he was elected be appointed to any civil office under the authority of the United States which shall have been created or the emoluments thereof which shall have been increased during such time." During Senator Knox's term in the Senate, the salary of the Secretary of State had been advanced from \$8,000 to \$12,000. Under the provision stated above, he could not, therefore, hold the office. In order to nullify the effects of this provision a bill was immediately introduced into the Senate to reduce the salary of the Secretary of State from \$12,000 to \$8,000. The Senate passed this bill without a dissenting vote. A similar measure was introduced into the House, and some opposition having developed,

value of the constitutional clause, but the measure was passed according to the action of the Senate, and the bill was immediately signed by President Roosevelt. A few days later it was discovered that the Legislative, Executive and Judicial bill, pending before Congress, contained a provision carrying \$12,000 for the salary of the Secretary of State. The bill was before the House on the report of the Committee on Conference. As there had been no disagreement as to the item relating to the State Department, the conferees were without authority to reduce the salary provided for the Secretary of State. It was therefore necessary to disagree to the conference report and to direct the Committee on Conference to take notice of the item in question and to change it to conform to the expression of the House on the subject. This was done and the Senate also agreed. This action removed any constitutional objection to Mr. Knox's becoming Secretary of State.

Several new bureaus were created in the Department of State by Senator Knox. A new officer to be known as the Counselor of the Department of State was provided for, and Henry M. Hoyt, formerly Solicitor-General of the United States, was appointed. Two experts were added to the existing Bureau of Trade Relations to collect information concerning foreign markets; bureaus of Far Eastern Affairs, of Latin-American Affairs and of Information were formed. At the extra session of Congress \$100,000 was appropriated to enable the Secretary of State to investigate trade conditions in foreign markets and for other purposes. At the last session of the 60th Congress the Senate made provision for a new Secretary and a Fourth Assistant Secretary of State. These provisions were, however, thrown out by the House.

For changes made in the conduct of the diplomatic service see paragraph *Diplomatic Service*, and for records of the different departments during the year see, in general, the paragraphs under the historical section of UNITED STATES, and especially, *Administration*.

DIPLOMATIC SERVICE

A new plan of promotion in the diplomatic service was introduced early in 1909 by Mr. Huntington Wilson, First Assistant Secretary of State, with the authority of the President. Under this plan secretaryships in the diplomatic service are to be classified according to their relative importance, and an efficiency record is to be kept of every officer in the service, so that there may be no promotion except upon well established efficiency, and that there may be no retention except upon the maintenance of an average high standard of efficiency. In addition the Secretary of State is directed to report from time to time to the President the names of those who have shown special capacity. The initial appointments to secretaryships are to be made only to the lowest grades, that is to say, to the third secretaryship of an embassy, second secretaryship of a legation, or secretaryship where the

value of the constitutional clause, but the measure was passed according to the action of the Senate, and the bill was immediately signed by President Roosevelt. A few days later it was discovered that the Legislative, Executive and Judicial bill, pending before Congress, contained a provision carrying \$12,000 for the salary of the Secretary of State. The bill was before the House on the report of the Committee on Conference. As there had been no disagreement as to the item relating to the State Department, the conferees were without authority to reduce the salary provided for the Secretary of State. It was therefore necessary to disagree to the conference report and to direct the Committee on Conference to take notice of the item in question and to change it to conform to the expression of the House on the subject. This was done and the Senate also agreed. This action removed any constitutional objection to Mr. Knox's becoming Secretary of State.

Several new bureaus were created in the Department of State by Senator Knox. A new officer to be known as the Counselor of the Department of State was provided for, and Henry M. Hoyt, formerly Solicitor-General of the United States, was appointed. Two experts were added to the existing Bureau of Trade Relations to collect information concerning foreign markets; bureaus of Far Eastern Affairs, of Latin-American Affairs and of Information were formed. At the extra session of Congress \$100,000 was appropriated to enable the Secretary of State to investigate trade conditions in foreign markets and for other purposes. At the last session of the 60th Congress the Senate made provision for a new Secretary and a Fourth Assistant Secretary of State. These provisions were, however, thrown out by the House.

For changes made in the conduct of the diplomatic service see paragraph *Diplomatic Service*, and for records of the different departments during the year see, in general, the paragraphs under the historical section of UNITED STATES, and especially, *Administration*.

With the incoming of a new administration there were bound to be many important changes in the Diplomatic Service, and such changes took place during the year. One of the earliest official acts of President Taft was to offer to President Charles W. Eliot of Harvard University the Ambassadorship to the Court of St. James. President Eliot, however, was obliged to refuse the offer, urging his advanced age and disinclination to enter into active diplomatic service. Mr. Whitelaw Reid, who has been American Ambassador to Great Britain since 1905, continued to fill that post during the first year of President Taft's administration, and nothing was said as to his being succeeded by another representative. An appointment of President Taft's which was generally approved, was that of Oscar S. Straus to be Ambassador to Turkey to succeed John G. A. Leishman of Pennsylvania, who was appointed Ambassador to Italy. Mr. Straus had twice before represented the United States at Constantinople. No less important was the appointment of William W. Rockhill as Ambassador to Russia to succeed John W. Riddle of Minnesota, who had been Ambassador since 1906. Mr. Rockhill at the time of his appointment was Minister to China, where he performed efficient service and became interested in Far Eastern affairs. He was considered especially qualified to represent the United States at St. Petersburg on account of his knowledge of the Chinese question.

from China since 1908. This is the second time that Dr. Wu has been recalled from his post as Minister to the United States. He first appeared in that capacity in 1897 and immediately became one of the most picturesque figures in the diplomatic corps. He had perfect command of the English language and his ready wit and genial characteristics made him one of the most popular of the diplomatic representatives to the United States. In 1902 he was suddenly recalled and again appointed in 1908. He was succeeded by Chang Yin Tang, who is said to be in thorough sympathy with the policy of adopting Western ideas in China. General Carlos Garcia Velez succeeded Gonzalo de Quesado as Minister from Cuba to the United States. The Marquis of Villalobar was appointed Minister from Spain to succeed Ramon Piña, and Dr. Paul Ritter became Minister from Switzerland to succeed Leo Vogel. Diplomatic relations with Venezuela, which in 1908 ceased as a result of the difficulties of the United States government with President Castro, were resumed in 1909 on the settlement of this question by the administration of President Gomez. William W. Russell was appointed United States Minister to Venezuela and Don P. Ezequiel Rajas became Venezuelan Minister to the United States. On page 737 will be found a list of representatives of the United States to foreign countries and a list of the representatives accredited to the United States in 1909.

CONSULAR SERVICE

Early in President Taft's administration, Secretary Knox took steps in the plans for Consular Service reorganization. In June he made public a list of fifty changes. Of these 27 were promotions, and 23 were appointments of new men. The most important change was in the office of Consul-General at London. This office has hitherto been given to some prominent party worker and has been regarded as a political office. Senator Knox took it from this category and placed it for the first time among the offices to be filled from the consular ranks. John L. Griffiths of Indiana was made Consul-General. This action is assurance that the entire consular service is to be made a permanent institution, and that all the high offices are to be filled by persons promoted from lower consular offices. All the new appointments were based upon the establishment of a standard of character, ability and efficiency.

For the most part the foreign Ambassadors to the United States remained the same during the year. There were, however, several important changes. A new Turkish Ambassador, Hussein Kiazim Bey, was appointed to succeed Munji Bey, to whom were temporarily assigned the duties of Acting Minister at Washington, following the recall on August 11, 1908, of Mehmed Ali Bey. Hussein Kiazim Bey was the first Turkish Ambassador accredited to this country, although the American representative at Constantinople has had ambassadorial rank for several years. Baron Kogoro Takahira was recalled from the Ambassadorship of Japan by the Japanese government and Baron Yasuga Uchida was appointed in his place. Señor F. L. de la Barra became Mexican Ambassador to the United States, succeeding Enrique C. Creel, who had served since 1907. Señor de la Barra was formerly Mexican Minister to Belgium. He had also served as Minister to Argentina. With these exceptions the Ambassadors of foreign countries remained the same during the

United States Representatives in the chief cities of the world in 1909, including the changes made by Secretary Knox, as indicated above, were as follows: CONSULS-GENERAL-AT-LARGE, George H. Murphy for North America, including Mexico and the Bermudas; Fleming D. Cheshire for Eastern Asia, including Straits Settlements, Australia, Oceania and the Islands of the Pacific; Albert R. Morawetz, South America, Central America, the West Indies and Curaçao; Alfred L. M. Gottschalk for European Asia, the Balkan States, Greece, Asia Minor, Persia, India, as far as the western frontier of the Straits Settlements and Africa; Heaton W. Harris for Europe, except European Asia,

CUSTOMS

In addition to the action taken against the sugar trust in relation to fraudulent weighing, the government carried on during the year several successful transactions for fraud in the New York Custom House. These convictions were the result of an investigation which has continued since 1907, and which resulted in the bringing to light of a great system of conspiracy to defraud the government by false weighing and by other means. An investigation was started in the fall of 1907 as the result of a request made of the United States district weigher for advance information as to the weight of certain importations of figs consigned to a Greek importer doing business in New York. The suspicions of the customs authorities were aroused and the consignment on which information was asked, was reweighed. It was found to weigh a third as much again as when previously weighed by the assistant weigher. Several other importations which had come in by the same steamer were also reweighed, and it was found that the weights in these exceeded those previously made, some of them being almost double. Measures were at once taken for an extensive investigation into these frauds. Importations carried on two ships of the Austro-American Line, comprising cheese and figs for various Greek and Italian importers, were found to have increased in weight from one-third to one-half during the voyage. George F. Lamb, an attorney in the law department of the Custom House, was assigned by Edward S. Fowler, then Collector of the Port, to investigate these frauds. It was evident that false Consular invoices were a part of the swindling scheme, and Mr. Lamb went to the chief points of export for the Mediterranean trade in Italy, Greece, and Turkey. In these countries the merchants must swear to the weight of their export shipments before their custom house officers. The shipments are then weighed by government officers by way of verification and the duties are assessed and collected before they are released for export. Mr. Lamb, after much opposition on the part of powerful local interests, discovered an organized band of exporters with headquarters in Calamata and Patras in Greece who were in league with importers in New York and Philadelphia. It was the habit of these exporters to state the correct weight in the export declarations before the authorities of their own governments. They would then go before an American Consul and swear to a weight from one-third to one-half less. This weight would then be incorporated in the Con-

tract. The exporter would then go, on the same day or the next day, to the agents of the steamship companies and state still a third weight for the same goods. It would be less than the correct weight given in the first instance to their own governments and more than the false weight given to the United States Consul. As the steamship companies charge by weight, they too were defrauded. The Port of New York was at this time divided into five weighing districts. In charge of each district was a United States weigher. These were responsible to the Surveyor of the Port, who is the outside executive for the Collector of the Port. Each weigher had an office in his district which was in charge of a foreman, and the actual weighing was done by assistant United States weighers stationed on the piers. The treasury regulations required that these actual weighers be frequently shifted, but means were found to evade this and it was so arranged that they were left on the piers for several years at a time. These weighers received from the combination of exporters in return for their fraudulent weighing a substantial percentage of the amount received as the result of the fraud. The weigher first weighed the goods and made a record of their true weight on a memorandum. He would then meet the importer at some place agreed upon and learn from him the invoiced or fraudulent weight of the goods. He would subtract the fraudulent from the true weight and estimate the saving in duties thus effected. The importer would then pay to the government officer a cash sum equal to half the evaded duty. The weigher would thereupon return to the pier and enter in his official dock book the fraudulent weight minus an imaginary allowance for shrinkage. Upon the weights given in this book the duties were estimated and collected. The assistant weigher was supposed to give one-half his spoils to his foreman, and he in turn was supposed to give one-half his share to the United States weigher in charge of the district, and he to divide one-half his booty with an official in the Custom House itself. Some of these foremen received as much as \$2000 a month as their share of the money paid for these frauds. The official in the Custom House used his authority to keep in charge of the weighing only members of the combination. If investigations were carried on as the result of suspicions of fraudulent transactions, this officer would first pigeon-hole the report for several months and then refer them for further inquiry to the United States weigher in whose district the weighing occurred. After many months the investigator would report that the goods, having passed into consumption, could not be traced.

By careful investigation, Mr. Lamb, the United States District Attorney, obtained legal proof necessary to prove the existence of this system in court. The first case was that of the United States against Simon W. Mescall, an assistant United States weigher, and S. S. Stamatopoulos, a Greek importer. This case was tried in January, 1908. A week before the opening of the trial, Mescall, through his attorney, offered to turn state's evidence.

THE UNITED STATES SUPREME COURT

make a full confession, and take a stand against the importer in return for immunity from prosecution. This offer was, however, afterwards withdrawn. After a ten days' trial a verdict of acquittal for both defendants was brought in by the jury. The second case brought by the government also resulted in acquittal, and the government found itself helpless unless they could find some one of the indicted persons who would turn state's evidence. After the trial of these cases the operations of the combination temporarily ceased, although the system was kept intact.

When William Loeb, Jr., became Collector of the Port of New York in March, 1909, he at once took up the fight against frauds in the Custom House. His first problem was how to secure the conviction of some of the importers and Custom House officials, whose guilt had already been established by circumstantial evidence. He was advised by Mr. Lamb that an offer of retention in the service be added to that of immunity, in order that some of the suspected persons might be induced to confess. After conferring with Secretary MacVeagh, it was decided that this was the only possible means of securing conviction, and this offer was made. Three United States assistant weighers at once accepted this offer of immunity and retention in the service. The case was brought against Antonio and Philip Musica for false weighing of a cargo of cheese. These assistant weighers took the stand and told in detail the whole story of corruption. Their evidence was so powerful that, after the government had presented its case, Philip Musica changed his plea from "not guilty" to "guilty," and was sentenced to one year of imprisonment in Elmira Reformatory and a fine of \$5000. A civil action is now being brought for the restitution of evaded duties. It is estimated that the firm has been evading at least \$12,000 worth of duties annually and probably much more. The action of the Collector in retaining in service these avowedly guilty persons resulted in drastic criticism, but he was upheld by the Secretary of the Treasury. It was affirmed that this was the only possible method of securing conviction. With the information of these men, added to the evidence gathered by Mr. Lamb, indictments were found against five of the members of the system in the Custom House itself, as well as against five large importing houses. As a result of these convictions and investigations the system was thoroughly broken at the end of the year.

FEDERAL JUDICIARY

A vacancy was caused in the United States Supreme Court by the death on October 24, of Associate Justice Rufus W. Peckham (q. v.). The place was filled by the appointment on December 13 of Judge Horace H. Lurton (q. v.). As Judge Lurton was more than 60 years of age, there was considerable discussion as to the propriety of his appointment, but there was no opposition in the Senate, and the appointment was promptly ratified. The United States Supreme Court at the end of 1909 was composed as follows, with the dates of appointment: Chief Justice Melville W. Fuller, of Illinois, 1888; John M. Harlan, of Kentucky, 1877; David J. Brewer, of Kansas, 1889; Edward D. White, of Louisiana, 1894; Horace H. Lurton, of Kentucky, 1909; Joseph McKenna, of California, 1898; Oliver

W. Holmes, of Massachusetts, 1902; William R. Day, of Ohio, 1903; and William H. Moody, of Massachusetts, 1906.

The United States Supreme Court handed down several important decisions during the year. The most notable of these related to trusts and corporations, and they will be found discussed in the article TRUSTS, and in the articles dealing with kindred subjects. Among the most notable of these decisions was that in regard to the commodities clause of the Railway Rate law (see RAILWAYS). A decision relating to the great fine of the Standard Oil Company was also awaited with great public interest. See STANDARD OIL COMPANY.

A decision which attracted wide attention was handed down by the United States Court of Appeals in October, confirming the decision of the lower court as to the guilt of Charles W. Morse in misappropriating the funds of banks in New York City. Mr. Morse was convicted in 1908, and was sentenced to a term of 15 years in the Federal Prison. After having spent several months in jail pending an appeal, he was finally released on \$250,000 bail. The Court of Appeals held that no important errors had been made in the trial of the case, and that Mr. Morse was plainly guilty of the crime charged against him. The case was carried to the United States Supreme Court on certain technicalities, and was sustained by that tribunal, and Mr. Morse was taken to the Federal Prison at Atlanta, Georgia, to begin his term.

The so-called Panama libel cases referred to in the section Congress, were dismissed by the United States courts in Indiana and New York, on the ground that there was no statute under which such cases could be tried. See Congress.

POLITICS AND GOVERNMENT

SIXTIETH CONGRESS. The second session of the 60th Congress met on December 3, 1908. During the summer recess two of the most conspicuous of the members of the Senate had died, William B. Allison, of Iowa, and Redfield Proctor, of Vermont. Governor Albert B. Cummins was elected to fill the place left vacant by Senator Allison and John Wolcott Stewart was elected to fill the vacancy caused by Governor Proctor's death. By a subsequent election of the Vermont Legislature Carroll S. Page was elected to succeed him. The death of Senator Allison left vacant the chairmanship of the Committee on Appropriations, which he had filled for many years. Senator Hale of Maine, who was next in seniority, was assigned to this chairmanship.

On December 8, President Roosevelt submitted his seventh and last annual message to Congress. Among his important recommendations was the modification of the Sherman Anti-Trust law, so that large combinations not formed to effect monopolies or against public interests might not be affected. He recommended also that railroads be taken out of the scope of the Sherman act and placed under the restriction of the Interstate Commerce Commission. Much of the message was taken up with matters relating to Federal courts and he expressed the desire that some method should be found for doing away with the law's delays. The most sensational part of the message, however, was the section criticising Congress for passing an amendment at its last session to the clause of the Appropriation bill which made provision for the

that this amendment has been a benefit only, and could be of benefit only to the criminal classes. If deliberately introduced for the purpose of diminishing the effectiveness of war against crime, it could not have been better devised to this end. It forbade the practices that have been followed to a greater or less extent by the executive heads of the various departments for twenty years. . . . These practices have enabled us to discover some of the most outrageous frauds in connection with the acquisition of government lands and government timber by great corporations and by individuals. These practices have enabled us to get some of the facts indispensable in order to secure the conviction of the wealthiest and the most formidable criminals with whom the government has to deal. . . . The chief argument in favor of the provision was that the Congressmen do not themselves wish to be investigated by the Secret Service men. Very little of such investigation has been done in the past, and it is true that the work of the Secret Service agents was particularly responsible for the indictment and conviction of a Senator and of a Congressman for land frauds in Oregon. I do not believe that it is in the public interest to protect criminals in any branch of the public service, and exactly as we have again and again during the last seven years prosecuted and convicted such criminals who were in the executive branch of the government, so in my belief we should be given ample means to prosecute them if found in the legislative branch, but if this is not considered desirable a special exception could be made in the law prohibiting the use of the Secret Service force in investigating the members of Congress. It would be far better to do this than to do what actually was done and strive to prevent or hamper effective action against criminals by a legislative act of the government."

The Senators and Representatives professed to see in this statement a virtual declaration that Congressmen had restricted the operations of the government Secret Service because they did not themselves wish to be investigated, and great indignation was expressed in both branches of Congress against this alleged accusation by the President. Resolutions were passed by the Senate and House and committees were appointed to investigate the President's charges. The House committee reported that it could not find in the hearings before the committee or in the records of the House or Senate any justification of this impeachment of the honor and integrity of Congress. It was also resolved that the President be requested to transmit to the House any evidence upon which he based his statement and also to transmit to the House any evidence connecting any member of the House of Representatives of the 60th Congress with corrupt legislation in his official capacity and to inform the House whether he has instituted proceedings for the punishment of any such individuals by the courts or has reported any such alleged delinquencies to the House of Representatives. The President deferred any reply to this action of the Senate and the House until after the Christmas holidays. On January 4 he replied in a message, in which he disavowed

and the House voted to lay on the table some portions of the message relating to the Secret Service.

Among several special messages sent by the President to Congress was one transmitting the draft of a bill to replace the present law under which the United States could proceed in time of emergency to raise a voluntary army. A special message was sent also in relation to the Brownsville affair. See paragraph *Brownsville Affair*.

Another sensational message was sent on December 15 as a result of accusations of corruption in connection with the sale of its rights to the Panama Canal by France to the United States. In this message the President emphatically denied such charges and characterized them as libelous and scurrilous. The chief responsibility for the circulation of these charges he placed upon Joseph Pulitzer, the owner of the *New York World*, and incidentally against Delavan Smith, editor of the *Indianapolis News*, as being responsible for the circulation of these rumors from the matter obtained from the *New York World*. The President insisted that there had been nothing in the transaction between the United States and France in connection with the Panama Canal which required an investigation. He expressed the opinion that suit for libel of the government should be brought against Mr. Pulitzer, and added that the Attorney-General was considering the form that the prosecution should take. The matter stated in the newspapers relating to this transaction involved Charles P. Taft, half-brother of William H. Taft, and Douglas Robinson, brother-in-law of President Roosevelt. Action on this message was deferred until Congress had met again following the Christmas holiday recess. See *Federal Judiciary*.

Congress adjourned on December 19 until January 4, 1909.

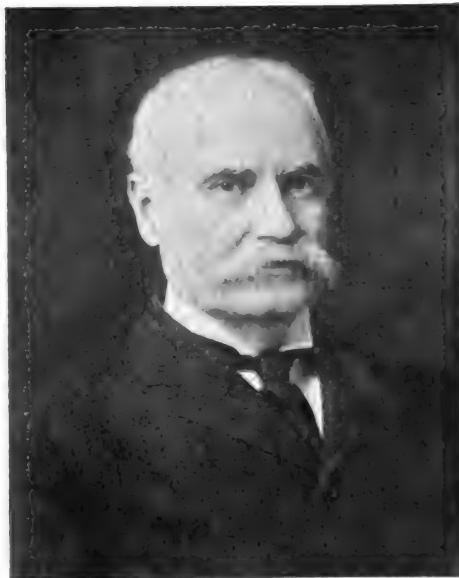

The first legislative act of Congress on its reassembling was the voting of \$800,000 for relief work at Messina, Italy.

On January 6 in reply to a request from the Senate asking for information from Attorney-General Bonaparte as to the absorption by the United States Steel Corporation of the Tennessee Coal and Iron Company, President Roosevelt sent a special message declining to permit the Attorney-General to furnish the data requested. The President declared that he had been advised that in his opinion no sufficient ground existed for legal proceedings against the Steel Corporation, and that the situation had been in no wise changed by its acquisition of the Tennessee Coal and Iron Company. He declared that he had given to the Senate all the information on the subject which appeared to be material and relevant and he added that he had instructed the Attorney-General not to respond to that portion of the resolution which called for a statement of his reasons for inaction. He added, "I have done this because I do not conceive it to be within the power of the Senate to give directions of this character to the head of an executive department or to demand from him reasons for his action. Heads of executive departments are sworn to the Constitution and the laws passed by the

FOUR PROMINENT UNITED STATES SENATORS

gress in pursuance of the Constitution and to the direction of the President of the United States, but to no other direction whatever." The President stated that the facts in regard to the purchase of the Tennessee Coal and Iron Company were as follows: Mr. E. H. Gary and Mr. H. C. Frick in behalf of the Steel Corporation in November, 1907, called on the President during the panic of that year and told him that the purchase of the Tennessee Coal and Iron Company was urged upon them by responsible bankers in New York as the only means of preventing a failure that might prove disastrous to the entire community; that its purchase would leave the Steel Corporation owners of not to exceed 60 per cent. of the Steel properties of the United States, and they asked the President if the acquisition of the Tennessee Coal Company would be regarded by him as a violation of the law. The President replied that while he could not advise them to take the action proposed, he felt it no public duty of his to interpose any objection. The President was subsequently advised by the Attorney-General that there were no legal grounds for proceedings against the Steel Corporation and that the purchase of the Tennessee Coal Company would constitute no grounds for such prosecution. As a result of the action of the President in refusing to permit the Attorney-General to give the information required, on January 8 the Senate adopted a resolution directing its judicial committee to investigate the absorption of the Tennessee Coal and Iron Company by the United States Steel Corporation.

On January 7, President Roosevelt in a private communication to Senator Hale relating to his message on the Secret Service and the action of the Senate Committee thereon, made certain statements concerning Senator Tillman as pointing his case of the value of secret service agents' investigations. These charges were the result of an investigation made by the Department of the Interior and the findings of this report were included in President Roosevelt's letter to Senator Hale. The accusations against Senator Tillman had to do with a transaction in public lands in which, according to this report, he was pecuniarily interested. According to these charges it had been proposed by a certain timber and land syndicate in Oregon that the government should institute action against the Central Pacific Railroad Company to compel it to comply with the conditions on which it had obtained public land, namely, to open part of this land to sale to individuals, or else to procure the restoration of these lands to the public domain in order that they might be opened to entry by individuals as are other public lands. Senator Tillman was asked to introduce a law to this effect, and did so, and it was alleged that arrangements were made by him with certain attorneys acting for the syndicate to locate for him and seven members of his family, as well as for his private secretary, quarters of this land. The syndicate, which aimed to control this property, sent out circulars for the promotion of their sale and included in it the statement that among those who had spoken for a part of this land was Senator Tillman. In his letter to Senator Hale the President recalled that Senator Tillman on February 19, 1908 in a speech on the floor of the Senate denounced

the statement made in this circular and called for an investigation as to his relations with the syndicate. Such an investigation was carried on by the post-office inspectors, who obtained private correspondence that passed between Senator Tillman and persons who were alleged to represent him in the proposed land deals. This correspondence seemed to indicate that Senator Tillman was making arrangements to buy the land at the same time that he was urging the Senate to pass a resolution requiring the restoration of the lands in question to the public domains, so that they might be available for purchase, and it was further alleged that Senator Tillman had denied in the Senate on February 19, 1908, that he had undertaken to buy any of the land and that he had, on February 15, four days before, written a letter to a firm in Marshfield, Oregon, expressing a desire to purchase land, and asking that several sections be reserved for him. This correspondence was made public on January 8 and created a considerable sensation in the Senate. On January 12, Senator Tillman made a formal reply to the charges made against him. He went into the land transaction in which he was engaged and claimed that so far from concealing his part in it, he had been responsible for the investigation, and had told the Attorney-General and secret service officers all about his desire to purchase some of the land, which, through his efforts, was to be forfeited to the government by the Central Pacific Railroad Company. As to his statement in the Senate, when in denouncing the use of his name by the syndicate to attract purchasers he said he had not undertaken to buy any of the land in question, Senator Tillman explained that he "was perhaps disingenuous." He declared, however, that he had used the word "undertaken" in the meaning of "contracted" and contended that he had gone no further than to negotiate for the purchase of some of the land then held by the Railroad Company. Senator Tillman accused President Roosevelt of having been actuated by motives of personal spite in endeavoring to make a scandal of the former's connection with the proposed land purchase. He declared that he wished the fullest investigation of his connection with the matter in question. On January 14, Senator Tillman again spoke in defense of his land transactions, replying to statements derogatory to his dealings made by Secretaries Bonaparte and Meyer.

On January 12, Senator Foraker delivered a speech on the Brownsville episode, which was devoted almost entirely to the presentation of evidence to show that the private detectives employed by the Administration to obtain confessions from some of the negro soldiers discharged without honor from the 25th United States Infantry had been guilty of willful perjury and subordination of perjury. Senator Lodge replied to this speech defending the action of the President. On January 18 the Senate voted to increase the salary of the Speaker to \$15,000, and on the following day voted to increase the President's salary to \$100,000 a year. On January 21, a bill was passed in the Senate increasing the salary of 29 circuit and 84 district judges.

On January 20 the House, by a unanimous vote and without debate, adopted resolutions reported by the Committee on Judiciary, declaring vacant the seat of George L. Lilley,

who had declined to accept it. The committee declared that Mr. Lilley's tender of his resignation to the Governor in itself vacated his seat, and it was affirmed as a principle of common law that he could not hold two such offices as Governor of Connecticut and Representative from the State at one and the same time. On January 22 a message was sent to Congress by President Roosevelt transmitting the report of the National Conservation Commission and an inventory of natural resources. On the same day the Senate passed the legislative appropriation bill retaining the provision making the President's salary \$100,000. On January 26 the Senate passed an Anti-Opium bill (see OPIUM). The bill forbids the importation into the United States after April 1, 1909, of smoking opium in any form or any preparation or derivation thereof. Opium, other than smoking opium, may be imported for medicinal purposes only under regulations which the Secretary of Agriculture is authorized to establish. The bill was introduced by Senator Lodge. On February 1 it was passed also by the House.

On January 27 the Senate confirmed the nomination of Robert Bacon as Secretary of State to succeed Elihu Root, and John C. O'Laughlin as Assistant Secretary of State. On January 29 statements were read in the House by Charles P. Taft and William Nelson Cromwell, denying charges made in connection with the Panama Canal purchase (see above). On February 4 the House voted to strike out from the agricultural appropriation bill the appropriation for the proposed pure food referee board. On February 5 President Roosevelt vetoed the census bill passed by Congress. He based his veto upon the ground that the bill was a vicious application of the spoils system and that it did not provide for the appointment of special census takers under the civil service law. (See CENSUS BUREAU.) On February 6 the House passed a bill amending the bankruptcy law. The electoral votes cast for President and Vice-President were counted on February 10 in a joint session of the Senate and the House, and the election of Taft and Sherman was formally announced by Vice-President Fairbanks. On February 11 the Senate passed a bill introduced by Senator Hale designed to allow Mr. Knox to accept the portfolio of the Secretary of State (see CABINET). A joint resolution was also passed making February 12 a special legal holiday in the District of Columbia and the Territories in honor of Abraham Lincoln. The House on February 15 passed a bill similar to the Senate bill, reducing the salary of the Secretary of State to obviate the constitutional bar to the services of Senator Knox in that capacity. A bill was also passed in the House providing for separate Statehood for Arizona and New Mexico. The Senate on February 16 amended the Naval Appropriation bill so that in the discretion of the President one-half of the navy shall be kept in Pacific coast waters. The size of the two battleships provided for was limited to 21,000 tons each, and the purchase of powder from any trust except in war time was prohibited. On the same day the House passed a bill in-

17 transmitted to Congress a report of the engineers who accompanied Mr. Taft to Panama (see PANAMA CANAL.) The Senate on February 18 ratified the agreement between the United States and Great Britain providing for the submission to the Hague Tribunal of the Newfoundland fisheries dispute. (See FOREIGN AFFAIRS.) On the same day the House passed a bill amending the penal code. On February 23 the Senate passed a bill introduced by Senator Aldrich providing for a commission to consider the case of the negro soldiers discharged as a result of the Brownsville affair (q. v.).

On February 20 the sub-committee of the Senate Committee on the Judiciary appointed to investigate and report whether the President exceeded his authority in permitting the merger of the Tennessee Coal and Iron Company by the United States Steel Corporation, effected its report. The report was a sweeping condemnation of the President's action. See TRUSTS.

On February 25 the House adopted an amendment to the Sundry Civil Service appropriation restricting the secret service, and on the following day it passed a bill refusing an appropriation for the prosecution of the United States Steel Corporation for absorbing the Tennessee Coal and Iron Company. On February 27 the House passed the bill previously passed by the Senate, providing an opportunity for the negro soldiers of the Twenty-fifth Infantry to make themselves eligible for reinstatement. (See BROWNSVILLE AFFAIR.) On February 27, as a result of charges of corruption, jury bribing, and other offenses made against certain officials and leaders in the respective Territories the bills for the admission of New Mexico and Arizona as States were dropped. On March 1 the House passed the Forest Reserve bill and on the following day by a vote of 172 to 175 defeated the Postal Subvention bill. On March 3 both branches of Congress agreed to the Conference report of the Legislative Appropriation bill increasing the President's salary by \$25,000. On the same day the House passed an amended copyright bill. The Senate on March 4 ratified the Canadian boundary waters treaty and adjourned. The House completed its unfinished business and also adjourned.

In addition to the important legislation which it enacted, the most conspicuous feature of the Sixtieth Congress was, perhaps, the unprecedented number of treaties which it ratified. These numbered 58, and included 24 arbitration treaties, 11 conventions submitted by the second Hague Peace Conference, extradition, naturalization and trade-mark treaties, the Newfoundland fisheries agreement and a treaty with Great Britain relating to the use of the boundary waters between the United States and Canada. A second particular in which the Sixtieth Congress is unique is in the unprecedented amounts appropriated. In the first session the appropriations reached a total of \$1,008,000,000, and for the second, \$1,044,000,000, a total of nearly \$200,000,000 more than the record of the Fifty-ninth Congress. During both sessions no less than 38,000 bills were introduced into the two Houses. Out of

bility law, replacing the one pronounced unconstitutional by the Supreme Court; a government liability law to compensate Federal employees injured in the discharge of their duty; a child labor law for the District of Columbia; increased pay and vacations for the life-saving service; authorizing the Interstate Commerce Commission, in the promotion of the safety of employees and passengers, to prescribe regulations for the transportation of explosives by common carriers; tariff inquiry begun preliminary to revision; emergency currency providing a tax to insure retirement as soon as stringency disappears; national monetary commission created; militia made an integral part of the national military establishment; the pay of the army increased; the army medical corps increased, and a reserve medical corps created; the naval enlisted force increased; two battleships, ten torpedo-boat destroyers, three steam colliers and eight submarines authorized; consular service reorganized; the repeal of application of coastwise laws to the Philippines; the remission to China of part of the Boxer indemnity. Among the most important acts of the second session were the appropriation of \$800,000 to relieve the Italian earthquake sufferers; the prohibition of the importation and use of smoking opium; saving the Calaveras big trees of California; the extension for two years of the Burton bill limiting the amount of water taken from Niagara Falls; the codification of the penal laws; an amendment and consolidation of the copyright laws, chiefly to protect composers against the unauthorized use of their works in instruments for the mechanical and automatic reproduction of music; permission to the discharged negro soldiers of the Twenty-fifth Infantry to re-enlist on establishing their innocence in the Brownsville affair; increase of the President's salary to \$75,000; and the authorization of the Liberian Commission. Of the bills passed by this session the President vetoed nine. Among these the most important was the bill which provided for the taking of the thirteenth census without placing employees under civil service regulations. Congress did not attempt to pass these measures over the President's veto. Several important measures failed to become a law because of the failure of Congress to act upon them. Among these were bills establishing a ship subsidy, and making Arizona and New Mexico States. The secret service provision was left practically where it was in 1908, and no action was taken regarding the Federal regulation of water rights on navigable streams or on bond issues for waterway improvement. It failed also to act, in spite of requests from the Governors of over forty States, on a law continuing and providing for a national conservation commission. The measures which it passed tended to discourage the President from continuing this or other commissions.

The total of the appropriations of the second session of the Sixtieth Congress were \$1,044,401,857. This amount was divided as follows: Agriculture, \$12,995,036; army, \$101,195,833; diplomatic and consular, \$3,613,861; District of Columbia, \$10,609,531; fortification, \$8,170,111; Indian, \$11,854,982; legislative, executive and judicial, \$32,007,149; Military Academy, \$2,

ment appropriations, \$100,000,062. In addition to the specific appropriations made, contracts were authorized to be entered into for certain public works, requiring future appropriations by Congress to the aggregate sum of \$26,080,875. These contracts covered the following objects and amounts: For construction of sea-coast batteries in the Philippine Islands, \$600,000; two first-class battleships, one collier, six torpedo-boat destroyers and four submarine torpedo boats, including estimated cost of armament, \$24,845,000; and for the improvement of certain rivers and harbors, \$635,875.

A comparison of the total appropriations of the first session of the Sixtieth Congress, \$1,008,397,543, with those of the second session, \$1,044,401,857, shows an increase of \$36,004,313.

SIXTY-FIRST CONGRESS. Immediately on the adjournment of the Sixtieth Congress the Senate of the Sixty-first Congress was called to order by Vice-President Sherman and the new members were sworn in.

Many changes took place in the personnel of the Senate as the result of the elections of November, 1908, and as the result of death. Senator Allison of Iowa was succeeded by Albert B. Cummins, and Senator Teller of Colorado, another veteran of the Senate, was succeeded by Charles James Hughes, Jr. Elihu Root of New York took the place of Thomas C. Platt, and Senator Foraker of Ohio gave place to Theodore E. Burton. George E. Chamberlain of Oregon, though a Democrat, was elected Senator by a Republican legislature, as a result of the primary law of that State. Benjamin F. Shively of Indiana was the first Democrat elected to the Senate from that State since 1893. He is the only Democratic Senator north of the Mason and Dixon line as far west as Colorado. William O. Bradley of Kentucky succeeded Senator McCreary; Joseph L. Bristow of Kansas succeeded Senator Long; Coe I. Crawford of South Dakota succeeded Senator Kittredge; M. N. Johnson of North Dakota succeeded Senator Hansbrough, and Wesley L. Jones of Washington succeeded Senator Ankeny; and Senator Brandegee of Connecticut, Clark of Arkansas, Gallinger of New Hampshire, Gore of Oklahoma, Heyburn of Idaho, Newlands of Nevada, Penrose of Pennsylvania, Smoot of Utah, Stephenson of Wisconsin and Stone of Missouri were elected to succeed themselves.

The exercises in connection with the inauguration of President Taft were held in the Senate Chamber and on their conclusion the Senate adjourned (see *Inauguration*). On March 15 Congress met in special session to consider the preparation of the tariff bill, and on March 16 the President's message, pointing to the necessity for the revision of the tariff, was received. That part of the deliberations of Congress relating to this measure will be under the paragraph *Tariff*. (See article *TARIFF*.) The opening of Congress was heraldized in the House by a cool speech by Speaker Cannon and certain members of the House, who had become dissatisfied with the powers over the deliberations of Congress possessed by the Speaker. These members were popularly known as "insurgents" for a long time opposed the

the new House be governed by the previously existing rules, 31 Republican members joined with the Democrats and defeated the motion. Champ Clark, the Democratic leader, then made a motion which embodied in a general way the views of the Democrats and Republican insurgents. This provided for the adoption of the rules of the last Congress, with certain exceptions, the most important of which called for the direct election by the House of its own Committee on Rules, to consist of 15 members. This committee was also to report to the House in December, 1909, upon the whole subject of rules revision. The Speaker was meanwhile to appoint the necessary working committees for the short session. This proposal was defeated, largely as a result of the desertion from the insurgents of a group of Democrats, led by Representative Fitzgerald of New York. The latter proposed a so-called compromise resolution, which was adopted. This resolution gives rather more freedom of debate than has hitherto been enjoyed in the House, and provides for the recommitment of bills to reporting committees when there is no general desire on the part of the House to have such bills changed in certain particulars. The bill provides also for a calendar Wednesday, a plan under which bills on the calendar can be taken up each Wednesday in their regular order. A third amendment renders it permissible to order a bill sent back to its committee after the previous question has been moved. Speaker Cannon declared himself entirely satisfied with the Fitzgerald amendment. On March 16 the Speaker announced the personnel of the Rules, and Ways and Means Committees of the House. They were, in general, the same committees which had served in the preceding Congress. On March 17 Representative Payne, chairman of the Ways and Means Committee, introduced the tariff bill in the House. It was referred back to the committee. The House passed on the 18th a bill providing for the taking of the thirteenth census, and on the following day a new ship subsidy bill was introduced. The Senate, on April 10, passed a census bill. On May 10 a special message was sent to Congress by President Taft, recommending the amendment of the Foraker act under which Porto Rico is governed. The President called the attention of Congress to the political condition of Porto Rico, and the importance of prompt Congressional action. He declared that the situation was of unusual gravity as a result of the fact that the Legislative Assembly of Porto Rico had failed to pass the necessary appropriations to meet public expenditures, the effects of which would be to leave the island without financial support at the close of the fiscal year 1909. He dealt with the situation in vigorous language and declared that the Porto Ricans had forgotten the debt of gratitude that they owed to the United States for their liberty. He charged that the political leaders in Porto Rico had shown a disposition to put their personal motives above patriotism, and recommended taking away from them the power of appropriating money. He recommended also that there should be sub-

legislation. Senator Depew pointed out that he had proposed to the members of the Porto Rican House of Representatives that if they would pass the necessary appropriation bills, he would send a representative of the United States government to Porto Rico to make an investigation of the legislation proposed by the House and rejected by the Council. This, he said, was refused, and the representatives would consider no proposal that did not include acceptance by the Council of the legislation or certain important parts of it, which the Council had rejected. He stated the issue to be as follows: "The question whether the proposed legislation should be enacted into a law was left by a fundamental act of Congress to the joint action of the Executive Council and the House of Delegates as a legislative assembly. The House of Delegates proposes itself to secure this legislation without respect to the opposition of the Executive Council, or else to pull down the whole government." He declared that this spirit, which has been growing from year to year in Porto Rico, shows that too great power has been vested in the House of Delegates and that its members are not sufficiently alive to their responsibilities for the maintenance of the government to justify Congress in further reposing in them absolute power to withhold appropriations necessary for the government's life.

He proposed as an immediate remedy an amendment to the Foraker act similar to the provision made by Congress in the organic law of Hawaii and the Philippines: that if the Legislative Assembly shall at any time adjourn without making the necessary appropriations for the ensuing year, a sum equal to the appropriations of the preceding year shall be available for the carrying on of the government. The President gave a résumé of the history of the ten years' occupation of Porto Rico by the United States, and pointed out the immense benefits financially, socially, and educationally that the Porto Ricans had derived from American rule. He declared that the troubles of the island were caused, not so much by differences between political parties or by dissatisfaction on the part of the Porto Ricans in general with the American government, but were rather an attempt by the party in control of the House of Delegates to compel the United States government to change its own legislation so as to give that party control, not only of the Lower House, but of the Upper House and of the whole insular government and insular revenues, whether local or Federal.

On May 11 Senator Depew introduced a bill for the relief of the civil government of Porto Rico in the manner suggested by President Taft's message. The House and the Senate having agreed upon a census bill appropriating ten million dollars for the taking of the next census, the bill received its final passage on June 26. On June 7 the House passed the bill offered by Representative Olmsted of Pennsylvania in accordance with the suggestions made in the President's message in regard to the government of Porto Rico and on July 9 a similar bill was passed by the Senate. On August 4 the House passed the Urgent Defi-

FOUR PROMINENT MEMBERS OF THE UNITED STATES HOUSE OF REPRESENTATIVES

ciency Appropriation bill, which included an item of \$25,000 for the President's traveling expenses.

Just before the final adjournment of the House, August 5, Speaker Cannon made public the personnel of the House committees for the succeeding session. Much interest, both inside Congress and out, had centered in this list on account of the disposition to be made by the Speaker of the members of prominent committees who had been most actively opposed to his administration as Speaker. Among the foremost of the insurgent representatives who were deposed from important chairmanships were Representatives Cooper of Wisconsin, Fowler of New Jersey, and Gardner of Massachusetts. Mr. Cooper was chairman of the Committee on Insular Affairs; Mr. Fowler, chairman of the Committee on Banking and Currency, and Mr. Gardner, chairman of the Committee on Industrial Arts and Expositions. Each of these representatives was succeeded by a man who had especially espoused the cause of the regular organization as opposed to the insurgent body. Mr. Olmsted of Pennsylvania was made chairman of the Insular Committee; Mr. Vreeland of New York was placed at the head of the Committee on Banking and Currency, and Mr. Rodenburg of Illinois was given the chairmanship of the Committee on Industrial Arts and Expositions. With the exception of these representatives the important committees were left practically unchanged. Mr. Murdock of Kansas, who had been perhaps the most conspicuous of the opponents of Speaker Cannon, was not removed from his place on the Committee on Post-Offices and Post Roads. The chairmen of the most important committees were as follows: Ways and Means, Sereno E. Payne of New York; Appropriations, James E. Tawney of Minnesota; Judiciary, Richard W. Parker of New Jersey; Rivers and Harbors, D. S. Alexander of New York; Interstate and Foreign Commerce, James R. Mann of Illinois; Agriculture, Charles F. Scott of Kansas; Foreign Affairs, James B. Perkins of New York; Military Affairs, John A. T. Hull of Iowa; Naval Affairs, George E. Foss of Illinois; Public Lands, Frank W. Mondell of Wyoming; Banking and Currency, Edward B. Vreeland of New York.

SECOND SESSION. The second regular session of the Sixty-first Congress opened on December 6. There was one vacancy in the Senate due to the death of Martin N. Johnson during the recess. Mr. Johnson was succeeded by Fountain L. Thompson. Senator McLaurin of Mississippi was ill at the opening of the session and later died. Mr. Culberson of Texas, the minority leader of the Senate, resigned his position, and Hernando De Soto Money of Mississippi was chosen leader of the minority. President Taft's first regular message to the Senate was read on December 7. It proved to be a calm, judicial paper, from which discussion of many of the most important questions before Congress and the country were omitted for various reasons. Discussion of trust regulations and the amendment to the anti-trust laws was postponed to a later message. This was also true of recommendations relating to conservation of natural resources and kindred subjects. A large part of the message was taken up by the report of the relations of the government to foreign nations, forming a résumé of the po-

litical history of the United States in its foreign relations during the current year. The President earnestly recommended the favorable action of Congress toward the reorganization of the State Department upon modern lines in a manner to make it a thoroughly efficient instrument in the furtherance of foreign trade and of foreign interests abroad. He commended to the consideration of Congress the question of embodying in a statute the principles of the executive order upon which the efficiency of the consular service is wholly dependent. The most important question presented to the administration, in the opinion of the President, is that of economy in expenditure and sufficiency of revenue. He referred to the fact of the discovery of extensive frauds in the collection of the customs revenue in New York City and said that it seemed to him that the investigation of the frauds by Congress at present, pending the probing of the Treasury Department and the Department of Justice, might, by giving immunity and otherwise, prove an embarrassment in securing the conviction of the guilty parties.

In the matter of the tariff, President Taft referred especially to the maximum and minimum clause and the Tariff Board, and expressed the opinion that no tariff war with foreign countries will result from the operation of the former, as it is interpreted by him. The work of the Tariff Board, he said, would perhaps occupy two or three years, and he asked from Congress a continuing appropriation equal to that already made for its prosecution. He said that he believed that the work of the Board would be of prime utility and importance whenever Congress should deem it wise again to readjust the customs duties. There was nothing in the President's message which implied any immediate changes along the line of tariff legislation. The President recommended legislation providing for the appointment by him of a commission with authority to examine the law and equity procedure of the Federal courts of first instance, the law of appeals from these courts to the courts of appeal and to the Supreme Court, and the costs imposed in such a procedure upon private litigants and upon the public treasury, and to make recommendation with a view to simplifying and expediting the procedure as far as possible and making it as inexpensive as may be to the litigant of little means. President Taft recommended that appropriate legislation be adopted in compliance with the platform of the Republican party, to uphold at all times the authority and integrity of the courts, State and Federal, and that the procedure of the Federal courts with respect to the issuance of the writ of injunction should be more accurately defined by statute, and that no injunction or temporary restraining order should be issued without notice, except where an irreparable injury would result through delay, in which case a speedy hearing thereafter should be granted. Among other matters discussed in the message were: Second-class mail matter, postal savings banks, which the President earnestly recommended; ship subsidy, a measure for which he recommended passage; the admission of New Mexico and Arizona as States; Alaska, for whose government he recommended legislation providing for the appointment by the President of a governor and also of the Executive Council; the white slave trade, and political contributions in elections.

California submitted a resolution to the Senate, calling for all the papers relating to the Alaska coal land cases, which were embraced in the charges of Louis R. Glavis, the special land agent, against Secretary Ballinger. (See *President Taft's Administration*.) This resolution was passed, and Senator Jones of Washington thereupon read to the Senate a letter from Secretary Ballinger in which he demanded a thorough investigation made of the charges against him and his subordinates. No action was taken in regard to the investigation previous to the holiday recess, but it was decided that a joint committee of the House and Senate, to consist of six members of each body, should be appointed to inquire into the propriety of Senator Ballinger's conduct while Commissioner of the General Land Office, as well as head of the Interior Department. It was announced on December 21 that on Janu-

with the anti-trust law.

An important bill was introduced in the House of Representatives by Mr. Mondell, chairman of the Committee on Public Lands. The object of this bill was to conserve the deposits of coal in the public domain and to prevent monopoly and extortion in its distribution. The bill provides either a leasing system, by which title to the lands shall remain in the government under proper regulation and supervision by the Secretary of the Interior, or by the sale of the deposits with restrictions on their mining and use, which will control the minimum output and conserve the deposits as a public utility under similar regulations. This measure is, in general, in accord with the recommendations of Mr. Ballinger, Secretary of the Interior, in his annual report. See article PUBLIC LANDS.

CONGRESSIONAL REPRESENTATION. In the following table is given a list of the Senators and Representatives in the Sixty-first Congress:

noted in the section *Congress*. The resignation of Mr. Root as Secretary of State was made necessary by his election as Senator from New York (see NEW YORK). Mr. Robert Bacon, Assistant Secretary of State, was promoted to be Secretary of State to fill the interim (see *Cabinet*). On February 12, Mr. Roosevelt made an address at the dedication of the Lincoln Memorial at Hodgenville, Ky. (see CENTENARIES AND ANNIVERSARIES). On February 22 he welcomed the ships of the returning Atlantic fleet from their tour around the world (see *Navy*.)

Following the inauguration of President Taft Mr. Roosevelt went at once to his home in Oyster Bay, N. Y., where he remained until his departure on March 23 for his hunting trip in British East Africa. During 1909-10 he contributed a remarkable series relating to his hunting experiences to *Scribner's Magazine*. It was announced that Mr. Roosevelt would return to the United States about June 1, 1910.

INAUGURATION. Inauguration Day, March 4, was marred by one of the most severe snowstorms in years. This interfered greatly with the arrangements made and proved a great hardship to thousands of people who had come from all over the country to witness the ceremonies. In spite of this, however, they were carried out with dignity and impressiveness. At ten o'clock in the morning the two Houses of Congress met for the clearing up of the last remnants of legislative business. A few minutes before twelve o'clock a committee of Representatives and Senators waited upon President Roosevelt and informed him that Congress had completed its business and was prepared to adjourn if he had no other communications to make.

The first ceremony of the inauguration is the induction into office of the Vice-President, a ceremony which marks the end of one Congress and the beginning of another. It is customary for the Vice-President to be inaugurated in the Senate Chamber and the President in the stand on the south side of the Capitol. On this occasion, however, weather conditions were so severe that for the first time in sixty-three years the President, as well as the Vice-President, took the oath of office in the Senate Chamber. Upon the floor of the Chamber were the members of the two Houses of Congress, all the incoming members, justices of the Supreme Court, ambassadors and ministers from foreign countries, governors of States, and representatives of the army and navy. The Democratic leader in the Senate at the noon hour offered a resolution thanking Vice-President Fairbanks for his courteous and impartial administration as presiding officer of the Senate during his term. A few minutes later Mr. Sherman took the oath of office as Vice-President. Mr. Fairbanks delivered a farewell address and at its close declared the Senate adjourned without day. President Roosevelt had previously issued a proclamation convening the Senate in extraordinary session immediately, and Mr. Sherman at once called the body to order. Following a short address by the Vice-President the new members

inaugural address, which lasted about half an hour. Among the paragraphs to which special attention was paid were those relating to the problem of exclusion and general treatment in the United States of Oriental peoples, and those dealing with the questions arising from the negro problem. Following the inauguration came the inaugural parade from the Capitol to the White House. The weather had somewhat improved, but the streets and sidewalks were covered with melting snow and the route was swept by a searching wind from the north. In spite of this, however, President Taft and Vice-President Sherman stood on the reviewing stand and for three hours reviewed the parade. At the head of the militia from the States rode a dozen governors. The parade also included bodies of regular troops, infantry, cavalry, coast and field artillery and engineers, and detachments from the war ships of the battle fleet. The ceremonies of the day concluded with an inaugural ball in the Pension Building at which the President and Vice-President with their families appeared.

PRESIDENT TAFT'S ADMINISTRATION. The event of the first year of President Taft's administration which over-shadowed all others was the passage and enactment into law of the Tariff Bill. A full discussion of this subject will be found in the article *TARIFF* and in the sections under that heading below. The Cabinet had been completed some time prior to the inauguration (see *Cabinet*), but the President made, shortly after he had assumed office, several important appointments. Among these was the appointment of William Loeb, Jr., to be Collector of the Port of New York. It was understood that President Roosevelt especially desired that Mr. Loeb should receive this office. For details of its administration by him, especially with regard to the American Sugar Refining Co., see the article *TRUSTS*, and for customs frauds in general, the section *Customs* above. Other important appointments were those of Huntington Wilson of Illinois to be Assistant Secretary of State, and Beekman Winthrop of New York, to be Assistant Secretary of the Navy. Among the judicial appointments made by the President in the first month of the administration were the following: United States district judges: Alabama, William I. Grubb, Northern District; Minnesota, Charles A. Willard, District of Minnesota; Washington, George Donworth, Eastern District; associate justice of the Supreme Court of the Territory of Arizona, Edwin M. Doe, of Arizona. An appointment which took on added interest from the fact that the appointee was a Democrat, was that of Henry Groves Connor to be Federal Judge of the Eastern District of North Carolina. This appointment was taken to mean that President Taft intended to recognize the Democrats of the South in the making of judicial and other appointments. See below.

On March 27 the President announced the appointment of a budget committee of Cabinet members to supervise estimates of Federal expenses. This committee is to act as an advisory board in the preparation of the esti-

mates for the expenses of the government. The cabinet budget committee is to have general supervision of the executive departments with a view to keeping the estimates of expenditures within the government's estimated income. Similar committees were appointed by the House and the Senate and these are to act in coördination with the Cabinet committee.

One of the first acts of the President was to offer the ambassadorship to Great Britain to President Charles W. Eliot of Harvard University, but this offer President Eliot was obliged to decline (see *Diplomatic Service*). The ministry to China was the first important ministry which President Taft attempted to fill, and this he offered to Charles R. Crane of Chicago. Mr. Crane accepted the appointment, but on account of circumstances which later arose he resigned the position. For the discussion of this and other diplomatic appointments during the year, see *Diplomatic Service*.

An incident occurred in May which was taken to signify that President Taft did not intend to take any part in the disputes of political factions in the States. An attempt had been made in Kansas to have it appear that the President had taken sides in the controversy between Senator Curtis and former Senator Long, and Governor Stubbs and Senator Bristow, by appointing as assistant to the Attorney-General of the United States a man who was identified with the party headed by Governor Stubbs and Senator Bristow. Immediately after the appointment several newspapers in Kansas friendly to Governor Stubbs and Senator Bristow, claimed that the appointment marked the end of Senator Curtis's influence. When this was called to the attention of President Taft, he directed Attorney-General Wickersham to revoke the appointment, and declared that Governor Stubbs had "thoughtlessly placed us in a position that is entirely indefensible."

On May 19 and 20 President Taft visited Virginia and North Carolina in order to be present at the dedication of the soldiers' monument at Petersburg, erected by the State of Pennsylvania, and the celebration of the anniversary of the Mecklenburg Declaration of Independence, which was commemorated in the city of Charlotte, N. C. He took advantage of the latter occasion to make a statement of the policy he intended to pursue toward the South. He declared emphatically that the best way in which he could fulfill his pledges was by putting into office, regardless of party affiliations, men in whom the community at large would have confidence. "That," he said, "I am trying to do, and I am going to appoint Republicans and I am going to appoint Democrats, striving in each case to get a man who will commend himself to the community in which he lives." He emphasized also the great desirability of upbuilding in every State an intelligent and effective opposition for the reason that in order to be sure of having a good government it is necessary to have a good opposition. To that end he asked for a greater tolerance of public opinion in the South, and expressed his conviction that such tolerance would soon be approved.

During the session of Congress, President Taft was occupied chiefly with routine matters and with questions which concerned the tariff measure. After the latter had been signed he left

Washington to take up his summer residence in Beverly, Mass., where he carried on the executive business of the government.

THE BALLINGER-PINCHOT CONTROVERSY. The friction between Secretary Ballinger of the Interior Department and Gifford Pinchot, Chief Forester, proved the most vexing question with which the President had to deal during the first year of his administration. While this controversy did not become public until August, it had its beginning in the administration of President Roosevelt, over the withdrawal of certain public lands from entry. During the latter part of the Roosevelt administration, Mr. Ballinger, who was then Commissioner of the General Land Office, disagreed with Mr. Pinchot, who had the support of Mr. Garfield, then Secretary of the Interior, and of President Roosevelt. One of the last acts of the latter was to withdraw from entry 1,500,000 acres of land in Montana and Wyoming, to prevent alleged attempts towards acquisition of water power sites by a great corporation. When Mr. Ballinger became Secretary of the Interior, this order was rescinded, and the lands were thrown open to entry, on the ground that the large withdrawals made by President Roosevelt were not warranted by a strict interpretation of the law. Mr. Pinchot resented this action, and at a speech at the Irrigation Congress, at Spokane, in August, he declared that "to follow blindly the letter of the law without intelligent regard both for its spirit and for the public welfare, is nearly as dangerous as to disregard the law altogether." He furthermore declared that the water power trust was endeavoring to absorb rights which belong to the people. It was generally assumed that Mr. Pinchot's speech was a direct attack upon Secretary Ballinger, and a controversy at once arose over the respective policies of the two officials. This discussion, however, was soon overshadowed by another which arose indirectly from it. During the progress of the newspaper discussion, charges were made by L. R. Glavis, chief of the Field Division of the General Land Office, that Secretary Ballinger had used his influence in the period from his resignation as Commissioner of the Land Office, in 1908, to the time when he was appointed as Secretary of the Interior, to bring about the patents of certain Alaska coal lands, known as the Cunningham claims, which were alleged to be based on fraudulent and unlawful claims. A full discussion of the circumstances leading up to these charges will be found in the article LANDS, PUBLIC. At about the same time these charges were made by Mr. Glavis, a sweeping attack on the Forestry Service and the whole system of conservation as mapped out in the Roosevelt administration, was made by Ormsby McHarg, Assistant Secretary of Commerce and Labor. He declared that the Forestry Service had at its disposal information showing that the conservation policy of the government is absolutely needless and cannot be needed for several years. These charges were answered by Acting Forester Overton W. Price. Shortly after this attack Mr. McHarg resigned.

Mr. Glavis went for advice as to the proper procedure for preventing the patenting of the coal lands to Mr. Pinchot, who advised him to place his charges against Secretary Ballinger

connection with the alleged complaints. He pointed out that Mr. Ballinger's legal services on the Cunningham claims were very slight, and that at the time of their performance he was not connected with the government. He also pointed out that Secretary Ballinger had studiously refrained from having anything to do with the Cunningham claims, leaving that entirely to his subordinates. It appeared later that the President had placed the matter before Attorney-General Wickersham, who had furnished him with an opinion entirely exonerating Secretary Ballinger from blame. The President directed the dismissal of Mr. Glavis from the service for "filing a disingenuous statement unjustly impeaching the official integrity of his superior officer."

In the same letter President Taft went into the charges brought against Secretary Ballinger in relation to the alleged reversal of the policy inaugurated by President Roosevelt and carried out by Secretary Garfield, and the withdrawal from entry for private ownership lands in the public domain which contained valuable water power sites. As noted above, Mr. Ballinger had restored a large part of these lands to public entry. He later, however, modified his procedure, and again withdrew some of those which had been thrown open. This withdrawal, together with a controversy with the Reclamation Service as to contracts made with homesteaders, and the refusal of Secretary Ballinger to permit the Forestry Bureau to take charge of the forests on Indian reservations, were asserted to be proofs of the former's lack of sympathy with the policy of conservation. President Taft stated in his letter to Mr. Ballinger that he was conversant with every detail of the latter's course in these particulars, and that he approved it. He stated further that when Mr. Garfield withdrew this land from entry he withdrew parts of townships, with no relation to water powers, and that the land retained by Mr. Ballinger was so accurately plotted by the Geological Survey that it preserved the water powers as completely as the larger area withdrawn by Mr. Garfield. He stated also that the Attorney-General had sustained Mr. Ballinger's interpretation of the reclamation contracts, and that the Comptroller had ruled that the Forestry Bureau cannot, without additional legislation by Congress, which he recommended, administer the forests on Indian reservations. The President stated that no trust or monopoly or syndicate had obtained any water powers during Secretary Ballinger's incumbency, and expressed the belief that the present policy of the Interior Department would promote sound and sure development and conserve the resources in the reclamation of arid lands and in forestry.

President Taft disavowed any reflection on the administration of any other department of the government, and he sent to Mr. Pinchot a copy of his letter to Secretary Ballinger, with the statement that none of the facts contained therein was held to be criticisms of his administration of the Forestry Bureau.

The controversy did not end with this action

used in the preparation of articles published in these magazines was furnished by officials of the Forestry Bureau who were opposed to Secretary Ballinger. The latter replied to these charges in an interview on November 7, defending his action in the matter of the withdrawal of the power sites. On November 19 he denied other charges made against him, among them the assertion that he had been interested in the Alaskan Petroleum and Coal Company. This he denounced as a fabrication. At the same time he made a general denial of other charges made against him in magazines and elsewhere.

The agitation did not cease, and on December 21 the matter was taken up in the Senate, when Senator Flint, of California, submitted a resolution calling for all the papers relating to the Alaska coal and charges which were based on the charges of L. R. Glavis against Secretary Ballinger. This resolution was passed and a statement was immediately made by Senator Jones, of Washington, that this was in accordance with the personal wishes of the Secretary of the Interior. He read a letter from Secretary Ballinger asking for a thorough investigation of the charges made against him and his subordinates. Mr. Ballinger declared that he courted the widest and fullest inquiry by Congress into these matters, and asked for a wider investigation than the resolution provided for. It was decided on December 28 that the investigation be carried on by a joint committee of the Senate and House, to consist of six members of each house. This committee has the power to inquire into the propriety of Secretary Ballinger's conduct while Commissioner of the General Land Office, as well as the head of the Interior Department. No action was taken as to the appointment of the committee before the Christmas holidays.

THE PRESIDENT'S TOUR. In September President Taft started on a long tour of the country, which continued during the following month and included the eastern, western and southern portions of the country. The purposes of the tour were threefold. The President wished first to meet the people of the country and find out what they wished from his administration, and second, to interpret to them the recent events and occurrences of Federal legislation, and third, to shape public opinion by suggesting possible future legislation, and to raise for it popular support. The speeches which he made during the tour reflected these purposes. In Boston, where the journey was begun, his address was given up to monetary and currency reform. In Minnesota, which is one of the States in which the issue for radical tariff reform is especially urgent, he defended the tariff law as being, in spite of manifest defects, the best Protectionist measure ever passed by a Protectionist Congress. This address at Winona was received with less enthusiasm by the President's hearers than any other which he delivered in the course of his long journey. In Milwaukee the President urged the establishment of postal savings banks, and in Iowa he recommended the amendment of the Sherman

anti-trust law and the Hepburn law regulating interstate commerce. In Colorado the President spoke on reclamation as a branch of the conservation service, and promised that the work of the government should not be lessened. One of the most important events of his visit to Colorado was the opening of the Gunnison irrigation tunnel (see COLORADO). On September 28 President Taft spoke at Spokane on the subject of the policy of the administration in respect to the conservation of national resources. He took the opportunity of asserting that Secretary Ballinger was in accord with him as to the necessity of promoting in every legitimate way the conservation of national resources.

One of the most important and picturesque features of the President's journey was a trip down the Mississippi River from St. Louis to New Orleans. This was taken with the object of determining the proper methods for carrying out the proposed improvements in the Mississippi River. At a notable speech in St. Louis in the presence of about 175 Congressmen, he made these views public. He said that every comprehensive project of the sort should be taken up on its merits, and it should be determined by all possible means whether the country in which that project is to be carried out is so far developed as to justify the expenditure of a large sum in carrying out the project, and whether the project will be useful when done. He declared that when this preliminary proof should be furnished, he was willing to carry out the work as rapidly as possible. The proper method, in his opinion, is by issuing national bonds to pay the expenses. In relation to the Mississippi project he spoke specifically as follows: "Now there is a proposition that we pay \$500,000,000 or \$1,000,000,000 in bonds for the waterway, and then that they apportion a part to the Mississippi and a part to the Atlantic, a part to the Missouri, and a part to the Ohio. I am opposed to it because it not only smells of the pork barrel, but it will be the pork barrel itself. Let every project stand on its bottom."

In a later speech the President expressed his personal opinion that the deepening of the Mississippi waterway should follow, rather than precede, the completion of the work planned for the Ohio River. In this address he again made it plain that the important part is not to take the several parts of the problem one by one and work spasmodically at it, but to determine in advance whether the entire project as a whole is possible and likely to be profitable to the interests of the nation at large, and then if it seems desirable that it should be, to plan and finance it as a whole, keeping it free from all political influences. See WATERWAYS, INTERNAL.

An interesting event of the President's tour was his meeting, on October 18, with President Diaz at El Paso, Texas (see MEXICO). The tour began on September 14 and ended on November 10.

On December 8 President Taft opened the first session of the National Rivers and Harbors Congress. In an address delivered at that time he outlined still more definitely his ideas in regard to improvement of waterways (see WATERWAYS, INTERNAL). For a discussion of

the foreign relations of the government during the first year of President Taft's administration, see *Foreign Relations*, and for the work of the several departments, see sections on these departments under the general head UNITED STATES. See also other articles throughout the work relating to the politics and government of the United States.

TARIFF. The discussion of the tariff in the paragraphs below, will be limited to the passage of the bill through Congress, and its signing by President Taft. The completed measure is discussed more fully in the article TARIFF.

The revision of the tariff was foreshadowed by the plank calling for such action in the Republican platform of the campaign which resulted in the election of President Taft. After the election, hearings were held by the House Committee on Ways and Means, and much evidence was presented by manufacturers and others directly interested. Investigations were also carried on by the Finance Committee of the Senate, of which the chairman was Senator Aldrich. Following these hearings preparations on the bill were begun in the House of Representatives and in the Senate, and on the receipt of the message of President Taft on March 16, following the opening session of the extra session of Congress, Mr. Payne introduced the tariff bill which was the result of the work of the Committee during the previous summer and autumn.

Debates on the measure began immediately after its introduction. The discussion of the first week was devoted chiefly to arguments by the advocates of high protection, against the action of the framers of the bill in placing hides, iron ore and other raw material on the free list, and in reducing the duties on iron and steel. Still stronger opposition was shown against imposing a tariff on certain items formerly admitted free, as tea and cocoa, and against raising the duty on hosiery and gloves. The debates in the House, although they were vigorous in some respects were, on the whole, perfunctory. The most striking amendment was the placing of petroleum on the free list. In the measure as originally presented, petroleum crude or refined, was placed on the free list, but with the proviso that if crude petroleum or its products produced in any country imposing a duty on these commodities when exported from the United States were imported into the United States, a duty equal to that imposed by such country should be collected. This was called a countervailing duty. It was alleged in the House that this provision gave the Standard Oil Company almost absolute protection from foreign competition. Mr. Payne was forced to offer an amendment striking out the countervailing duty, and replacing it with an ad valorem duty of 25 per cent. This action, although it was strongly favored by Speaker Cannon, was defeated by a combination of Republicans and Democrats. This combination then obtained the passage of an amendment fixing the petroleum duty at a nominal figure of 1 per cent. Mr. Payne thereupon placed oil on the free list. Another important amendment to the bill was the elimination of the duty on tea, and the countervailing coffee duty. The countervailing duty on lumber was also eliminated. An attempt to place lumber on the free list was de-

Dingley schedule on hides was unsuccessful, and they were added to the free list. Several changes, chiefly downward, were made in the steel schedule. The bill was adopted by the House April 9, by a vote of 217 to 161. It was at once sent to the Senate and referred to the Committee on Finance. This committee at once reported a substitute bill which had been prepared by Senator Aldrich, chairman. This bill was remarkable in that it did not mention many of the most important and debated items of the House bill, including hides, oil, coal and wood pulp. Senator Aldrich explained that these items were purposely omitted in order that they might be discussed on the floor of the Senate. The bill contained no administrative features such as the maximum and minimum systems, which were added later. The most striking decreases of the Senate bill, as compared with the House bill, were on cocoa, hosiery and gloves, and the most striking increases were on imported beers and wines. The Senate bill also imposed a tax of 35 per cent. ad valorem on pleasure yachts hereafter built abroad for American account, the duty to be collected when the yacht first touches an American port. An important provision was in relation to works of art, which provides that paintings and sculpture at least twenty years old, shall be admitted free, and it further provides that all works of art, including tapestries, porcelains and antiquities 100 years old or more, shall be admitted free. Senator Aldrich in presenting the bill, claimed that the rates contained therein were lower than in the bill passed by the House. "the actual number of reductions being about three times the number of increases." He claimed that the great mass of the rates reported were below those of the existing law.

The course of the bill through the Senate differed from that of previous tariff bills, in that it was strongly opposed by a group of Republican Senators. These were Senator Beveridge of Indiana, Senator Bristol of Kansas, Senator Clapp of Minnesota, Senators Cummins and Dolliver of Iowa, Senator La Follette of Wisconsin, and Senator Nelson of Minnesota. On April 21 the reading of the bill by paragraphs was begun, and on the following day Senator Dolliver and Senator Nelson attacked the measure on the ground that it was not downward revision. Senator Aldrich replying to this criticism admitted that the Republican party committed itself to the revision of the tariff, but asserted that such a promise did not involve a revision of the tariff downward. He asserted that the bill introduced by him would give a revenue of \$345,000,000 from the customs annually. He further claimed that because of his new definitions of dutiable values, new methods of ascertaining the same, and more effective machinery for collecting customs, there would be a very pronounced reduction of expenditures. He promised a surplus of \$30,000,000 in 1911.

Considerable friction was caused by the attempts of the opponents of the bill to introduce into the debates reports collected from the State Department relating to economic conditions in

Senator Aldrich protested against the use of these data, and denounced the communication as an impertinence because of its relation to the pending tariff bill. He afterwards qualified his statement and eulogized the German Emperor, government and people. All the more important schedules were passed only after a strenuous opposition on the part of the insurgent Senators. These attacks were particularly bitter on the textile schedules, where the opposition was led by Senator Dolliver. Senator Aldrich, in spite of this opposition, had his forces so well in hand that he was able to secure a sufficient number of votes on practically every schedule. Amendments relating to iron, lumber and other important items, introduced by Senator Cummins, Senator Beveridge, and other insurgent Senators, were defeated.

The debate on the duties on lemons proved to be one of the most interesting of the session. Under the McKinley act, the duty on lemons was 25 cents per box, under the Wilson bill, 30, under the Dingley act, 80, under the Payne bill, \$1.00, and under the Senate bill, \$1.20. This duty was strongly opposed by Senator Root, who spoke in behalf of consumers, while the growers' interests were defended by Senator Flint, of California. He declared that the average profit for the growers since the Dingley Tariff law went into effect, was about 4 per cent. Senator Root claimed that taking the lowest figures for foreign lemons, the California growers were able to meet the foreign growers at the Atlantic coast with an advantage of 10 cents per box, and that notwithstanding this the lemon growers of California asked for an increase of 50 per cent. in duty. He declared that he could see no justification whatever in giving these growers an additional rate which would enable them to put their price still higher over and above the present large profits, and at the same time cut off the foreign importation so as to produce a scarcity in this country, and in the United States to put up the price still higher. In spite of Senator Root's position, the amendment was defeated by a vote of 44 to 28.

Two bills providing for an income tax in connection with the tariff measure were introduced, one by Senator Bailey, of Texas, and the other by Senator Cummins, of Iowa. The former represented the Democratic view on the subject, and the latter the Republican. The two bills were different in several important particulars, but the two Senators compromised their differences and agreed upon one bill. As the result of this combination they were in a position to force an agreement upon the date for a vote upon their proposition and it appeared that they had a very fair chance to secure the adoption of their measure as an amendment to the Senate bill. Senator Aldrich was opposed to the income tax at this time, and it was well known that President Taft also opposed it on grounds of constitutional interpretation, if not on those of political expediency. Before a vote could be forced on the measure introduced by Senators Bailey and Cummins, President Taft, on June 17, sent to Congress a special message in which he called attention to the fact that he had recommended in his inaugural address

and in his message to Congress the adoption of a tax on inheritances as a means of meeting the probable deficiency of income. He pointed out that the House had already adopted this idea, and that the Senate was considering an income tax and was apparently not in favor of a tax on inheritances. He declared that the form of income tax proposed in the Senate was almost the same as that which the Supreme Court of the United States had declared unconstitutional after its adoption in connection with the Wilson tariff bill. He therefore recommended that Congress, before resorting to the device of a Federal income tax, should insure the removal of all constitutional doubt, by taking steps to amend the constitution. This should be done, he declared, by the framing and adoption of a suitable amendment by Congress, and its submission to the States in order to secure the needed approval of at least three-fourths of the 46 States of the Union. He proposed that in the meantime, Congress should levy a tax of 2 per cent. upon the earnings of corporations.

On June 28 the general consideration of the schedules of the bill was completed in the Senate, and a resolution providing for the income tax amendment was introduced. On July 2 the Senate adopted the corporation tax amendment by a vote of 60 to 11. Of those voting against it, three were Democrats and eight Republicans. Nearly all the Republicans voting against the bill belonged to the so-called insurgents or radical wing, who preferred an income tax, and did not wish to accept the proposal as a substitute for their more sweeping plan of levying a tax upon all large incomes. In the bill as accepted, the corporation tax was reduced from 2 per cent. to 1 per cent. upon the net incomes of all business corporations. An amendment offered by Senator Clapp, of Minnesota, taxing the net incomes of so-called holding companies, was adopted. On July 5 the Senate, by unanimous vote, adopted the resolution providing for the submission of an income tax constitutional amendment to the State Legislatures. On this date consideration of the administrative features of the bill was completed.

During the progress of the bill through Congress, there was much discussion in the press and elsewhere, as to the attitude of President Taft toward the completed measure. While the bill was in process of passing through Congress, the President did not publicly express any opinion or attempt in any way to influence the measures of the enactment. When committees of the House and Senate met in conference to agree upon a perfected bill, President Taft's attitude became more positive. A number of the members of Congress, Senators and Representatives, called upon him in the middle of July to argue against placing on the free list certain articles as lumber, iron ore, hides, gold and other raw materials. It was well known that the President advocated placing all these articles on the free list. The House had for the most part removed the tariff from such articles, but in the Senate they had, to a considerable extent, been restored. The President made public a statement regarding this interview, and made clear his opinion as favoring, in a general way, an approximation toward the free raw materials. He did not, however, commit himself to free raw materials as a prin-

ciple, but took the view that there were practical grounds for low rates, if any, on iron ore, hides, coal, oil and lumber. Mr. Payne and the House conferees agreed with the President, and Senator Aldrich professed his readiness to yield if the President could find the votes to adopt the conference report providing for practically free raw materials. The President undertook to find these votes and did so.

The Senate passed the tariff bill on July 8, by a vote of 45 to 34, and a conference committee consisting of members of the House and Senate, was at once appointed to agree upon amendments. The members of the Senate Committee were Senators Aldrich, Burrows, Penrose, Hale, and Cullom, Republicans, and Money, Daniel, and Bailey, Democrats. On the part of the House, the conferees were Representatives Payne, Dalzell, McCall, Boutell, Calderhead, and Fordney, Republicans, and Clark, Underwood, and Griggs, Democrats. Considerable comment was occasioned by the action of Speaker Cannon in passing over Representative Hale, of Connecticut, and Representative Needham, of California, who would, in the ordinary course, have been appointed members of the committee. These men were well known to be advocates of lower tariff rates, while Representatives Calderhead and Fordney, who were below them in seniority, were known to be advocates of higher duties. On July 31 the House adopted the conference report of the tariff bill by a vote of 195 to 183. Twenty Republicans voted in the negative, and two Democrats in the affirmative, and on August 5 the Senate adopted the conference report by a vote of 47 to 31, seven Republican Senators, Beveridge, Bristow, Clapp, Cummings, Dolliver, La Follette and Nelson, voting against the report, and one Democrat, McEnery being paired for the bill.

Among the provisions of the tariff bill was one for the appointment of a tariff commission, and in accordance with this provision, President Taft appointed in September as members of this commission, Henry C. Emery, professor of political economy at Yale University; James B. Reynolds, assistant secretary of the treasury for four years, and Alvin H. Sanders, editor of the *Breeders' Gazette*, who is an authority upon agricultural matters. The general scope of the work of this commission will be found discussed in the article TARIFF. Provision was also made for the establishment of a customs court to pass upon measures relating to the enforcement of the tariff law. This is also discussed in the same article. For an account of the provisions of the Philippine tariff bill which was passed in connection with the general tariff bill, see PHILIPPINES.

TREATIES. Although the number of arbitration treaties between the United States and foreign countries was less than in 1908, when more than a dozen such treaties were agreed upon, many treaties relating to the arbitration of questions at issue were effected. These included arbitration treaties with Mexico, Peru, Honduras, Portugal and Austria-Hungary (see ARBITRATION, INTERNATIONAL). Extradition treaties were signed with Santo Domingo.

Before Mr. Root relinquished the office of Secretary of State (see Cabinet), he concluded several important negotiations pending between the United States and foreign countries. Among these were the Colombian-Panamanian

in ten annual installments of \$250,000, in partial settlement of Colombia's foreign debt, contracted while Panama was a part of Colombia. The treaty relating to the recognition of Panama was passed by the Colombian Assembly, but that body on April 8 refused to ratify the other provisions, and the matter was left in abeyance. See COLOMBIA.

A number of vexing questions had been pending during 1908 between the United States and Great Britain. The first of these related to the fisheries dispute with Newfoundland. The Treaty of 1818 provided that Americans shall be guaranteed the same rights of fishing in Newfoundland waters as are possessed by British citizens. The contention of the United States government has been that the British subjects possessed unrestricted fishing rights. The British government argued that the rights of American fishermen were subject to change at the will of the Newfoundland government expressed in the enactment of local regulations. Such regulations have been made, and each of them has been regarded by American fishermen as a curtailment of the original unlimited privilege to fish. The attempted enforcement of these regulations resulted in a great accumulation of claims from aggrieved fishermen. Secretary Root and Ambassador Bryce, in February, signed treaties providing first, for the submission to the Hague Tribunal of the arbitration treaty of 1818 for interpretation; second, for the submission to a joint high commission consisting of six members, three from each country, of all questions which shall arise between Canada and the United States. A third treaty settles all waterways controversies, among them being the question of the diversion of water for power purposes at Niagara Falls, the navigation of the St. John River between Maine and New Brunswick, the reciprocal use of the canals connecting various parts of the boundary waters, the use of water for reclamation purposes along the border and near the Milk and St. Mary rivers, and the principles of navigation of the Great Lakes. These treaties are the first to be arbitrated in accordance with the terms of the general arbitration treaty with Great Britain, concluded in 1908. The treaty relating to the Newfoundland fisheries had not the full consent of the Newfoundland Premier, but it was signed prior to his approval by Mr. Bryce, the British Ambassador, in order to enable Mr. Root to explain the scope of the treaty to the Senate Foreign Relations Committee before he relinquished the office of Secretary of State. The treaty providing for the regulating of the boundary line between the United States and Canada was ratified by the Senate on May 4. The agreement in regard to the Newfoundland fishery dispute was ratified by the Senate on February 18.

As a result of the enactment of the new tariff law, the commercial agreements between the United States and certain foreign countries were terminated. These countries were Great Britain, Germany, France, Italy, Spain, Portugal, and the Netherlands. There were understandings also with Switzerland and Bulgaria. On the enactment of the new law, the State Department gave formal notification to these

were carried on during the latter part of the year with France, Germany, and several other countries, but no definite arrangements had been made.

On May 6 the Senate ratified an important agreement between the United States and Russia, providing for the regulation of corporations or stock companies and other commercial associations. A patent convention with Germany was also made. See Patents.

FOREIGN RELATIONS. The relations of the United States with the great Powers in 1909 were uniformly friendly. The only serious difficulties with other countries were those which arose from conditions among its neighbors in Central and South America. The year saw the final settlement of the long pending disputes with VENEZUELA, which arose during the administration of President Castro, and continued until his deposition from office in 1908. Certain claims were made by American corporations and individuals of unfair treatment on the part of the Venezuelan government. These claims numbered five and were as follows: That of an American citizen, A. F. Jaurett, who was expelled from Venezuela in 1904; that of the Orinoco Corporation, which claimed large concessions covering iron mines, asphalt privileges and hard-wood concessions; that of the Orinoco Steamship Company, which claimed exclusive rights of navigation on branches of the Orinoco River; that of the New York and Bermudez Asphalt Company, which claimed the right to take asphalt from La Felicidad Lake; and that of the United States and Venezuelan Company, which declared that it had been deprived of the right to mine asphalt and build a railway. On the accession of President Gomez, in 1908, William I. Buchanan was sent as special commissioner, representing the United States, to arrange a plan of settlement for these claims, and on February 13 a complete agreement was reached, and the protocol embodying the terms of this agreement was signed and ratified by the Venezuelan Congress. Two of the cases, those of Jaurett and the New York and Bermudez Company, were settled outright by Mr. Buchanan, and it was decided that the three others should be submitted to the Hague Tribunal for arbitration. These were the claims of the Orinoco Corporation, the United States and Venezuelan Company, and the Orinoco Steamship Company. Provision was made, however, that Venezuela might reach an amicable settlement within a period of five months with either the Orinoco Corporation, or the United States, or the Venezuelan Company. Such arrangements were made, and on August 24 a protocol was signed by which the government of Venezuela agreed to pay \$475,000 to the United States on behalf of the United States and Venezuela Company. One-eighth of the amount was paid immediately, and the remainder was to extend over seven annual payments. On September 10 an additional agreement was made by which the claim of the Orinoco Corporation against the Venezuelan government was settled by the payment of the latter to the company of \$385,000 in eight annual installments. This left but one of the five claims unsettled. This

was that of the Orinoco Steamship Company, which was sent to the Hague Tribunal for settlement. The United States government chose Gonzalo de Quesada, former Cuban Minister to the United States, and a member of the Permanent Court at The Hague, as an arbitrator, while Venezuela named Dr. Roque Saenz Pena, former Minister of Foreign Affairs of Argentina. These arbitrators will meet at The Hague in January, 1910, and select the third member of the tribunal.

The relations of the United States government with the government of NICARAGUA were vexing during the year, as a result of the political conditions in the latter country. A series of offenses were perpetrated against American representatives, American citizens, and American interests generally in the early part of the year, and in March the United States withdrew its diplomatic representative, and turned over the archives to the American Consul. On March 17, Secretary Knox sent to the Nicaraguan minister at Washington a severe note, expressing the desire of the government of the United States for the arbitration of the long-standing Emery claim. This claim related to amounts alleged to be due as the result of the mahogany concession granted in 1898. The concession was to run for a term of years, and the concessionaires were to pay to the Nicaraguan government certain sums of money, and also a tax on logs taken from the country, while the company was to enjoy the privilege of bringing in all necessary working materials free of duty. The terms of the concession provided that any disputes should be settled by arbitration, by a tribunal of three members, one chosen by each side and the third by those two arbitrators. In 1903 the company was accused by the Nicaraguan government of smuggling, and upon the initiative of the government an arbitration tribunal was appointed in accordance with the terms of concession. This tribunal decided that inasmuch as the company had paid taxes for three years in advance, the concession could not be annulled. In July, 1906, President Zelaya notified the concessionaires that he regarded the concession as annulled, and directed his legal department to institute suits for money due the government. The litigation between the company and the government drifted along through President Roosevelt's administration without any definite settlement. When Mr. Knox became Secretary of State, the matter was again taken up.

The reply of the Nicaraguan government to the note of Secretary Knox, referred to above, was considered unsatisfactory by the State Department. On April 5, however, it was announced that the Nicaraguan government had decided to settle the Emery case along the lines suggested by the Department of State, and President Zelaya appointed Pedro Gonzales as a special envoy to carry on negotiations. On May 25 a protocol which provided for the arbitration of the claims was signed by Secretary Knox and the Nicaraguan representative. This protocol provides for a tribunal of five members, two representing the United States, two Nicaragua, and a fifth to be chosen by the four representatives. If the four members representing the United States and Nicaragua are unable to agree on a fifth member, the King of England will name the arbitrator.

The outbreak of the revolution against Presi-

dent Zelaya, headed by General Estrada (see NICARAGUA), resulted in still more friction between the United States and Nicaragua. Two American citizens who took part in the revolution as officers in the army of General Estrada, were captured by President Zelaya's forces, and at his command were put to death, it was alleged, without proper trial. In November, Secretary Knox wrote a sharp letter to President Zelaya denouncing the execution of the two Americans, Cannon and Groce, and declaring that an investigation would be made as to the responsibility for their execution. In a message, which was said to have been sent by Zelaya to a New York newspaper, published on November 26, he attempted to explain the execution of Cannon and Groce, and declared that they had been captured in setting mines at the mouth of the San Juan River, with a view to blowing up the steamers conveying government troops. He declared, also, that they had voluntarily confessed their guilt. The resignation of President Zelaya a short time after this put an end to whatever measures the United States government had anticipated taking against him on account of the execution of these two men.

On August 23, PANAMA paid to the United States \$14,000 as money reparation in cases involving the maltreatment of American naval officers and seamen at the hands of the police of the republic on four different occasions since June 1, 1906. Of this amount \$5000 is an indemnity in what is known as the "Cruiser *Columbia* Incident," when several officers in uniform were arrested, locked up and roughly handled in Colon on June 1, 1906. The other cases related to the ill-treatment of American citizens. On July 22, the American Vice-Consul at Cartagena, COLOMBIA, was attacked and injured. The motives of the assault were said to be entirely personal. The government of Colombia expressed its deep regret at the occurrence, and promised that the matter should be investigated and the culprit punished according to Colombian law. The Alsop claim, which had been pending for many years between the United States and CHILE, was settled by agreement to arbitrate. This claim originated in the loan of money, in 1874, by Alsop & Company, an American concern, to the Bolivian government in return for the right to work guano deposits. The loan amounted to more than \$1,000,000 in gold. Before the arrangements were completed, the control of the custom house at Arica passed from the Bolivian government to the Chilean government. The receipts of the custom house were diverted, and changes were made in the mining laws of the country, which practically nullified the agreement to repay the loan. Since that time negotiations have been carried on at different periods to bring about an adjustment. Both governments agreed to a protocol to submit the controversy for definite settlement to King Edward VII.

The relations with CUBA during the year were without serious incidents. On January 28 the Cuban government resumed control of the island when General Gomez took the oath of office as President of the republic. Shortly after this, the last of the American troops left for the United States. (See CUBA.) In June Secretary Knox called the attention of the Cuban government to several matters of public policy which, according to his views, were not being

would be settled. In July a contract made with the Cuban government for gun manufacture in France and Germany was broken on account of the protest made by the United States government against the purchase of these arms abroad. It is believed that the contracts were broken in order to show the desire of the Cuban government to meet with the desires of the government of the United States.

The meeting of President Taft with President Diaz, of MEXICO, at El Paso, Texas, and Juarez, Mexico, in the course of the former's tour (see *Administration*), was an interesting event, as being the first time in the history of the nation in which the President has personally greeted the chief executive of any other government on foreign soil. The treaties relating to the settlement of the fisheries dispute with NEWFOUNDLAND, and other matters pending between the United States and GREAT BRITAIN, and the United States and CANADA, are noted in the paragraph *Treaties* above. The personnel of the Court of Arbitration which will finally adjust the fisheries dispute between the United States and Newfoundland are as follows: Dr. Heinrich Lammasch, of Austria, who will act as president and cast the deciding vote; Dr. Luis M. Drago, of Argentina; Dr. A. F. de Savorin Lohmann, of Austria; Hon. George Gray, of Delaware, Judge of the United States Circuit Court; and Sir Charles Fitzpatrick, Justice of the Supreme Court of Canada.

As is noted in the section on *Tariff*, negotiations for commercial agreements were carried on during the year between the United States government and FRANCE, GERMANY, and several other countries in Europe.

In February the United States government refused to return to RUSSIA for trial, the refugee, Christian Rudowitz, who was charged with complicity in murder, arson and robbery. The evidence presented by the Russian government against Rudowitz was declared weak and conflicting, and extradition was resisted on the grounds that the acts with which he was charged were political offenses. His case was similar to that of Jan Pouren, whose extradition by Russia was refused in 1908. The attempt of Russia to gain control of the administration of the municipalities in Manchuria called forth a protest from Secretary Root, in 1908. As a result of this, the matter was left in abeyance, but in May, 1909, Russia announced the terms of an agreement by which she would gain indirect control. Secretary Knox protested against any infringement of China's integrity, or the principles of equal opportunity. In April, in response to requests from various parts of the United States asking that the government afford protection to the Americans in TURKEY, it was decided to send the armed cruisers *Montana* and *North Dakota* to Alexandretta, Turkey. For an account of the aid rendered the sufferers in the earthquake in ITALY by the United States government, see *ITALY*.

In spite of the attempts made by the California Legislature and other Western Legislatures to pass legislation unfriendly to JAPAN (see *CALIFORNIA*), the relations between the

chants, educators, and members of Parliament, from the most important Japanese cities. Their object was a tour of the country, and their mission, it was formally announced, was to strengthen the bonds of friendship and commerce between the two countries. They were everywhere received with the greatest consideration. The second incident was the courteous and friendly message from the Emperor of Japan congratulating the City of New York on the anniversary of the discovery of the Hudson River, and offering to the city as a memorial present from Japan 300 Japanese cherry trees to be planted along Riverside Drive and the Hudson River, by Japanese gardeners, to be sent to the United States for this purpose. On January 15 the Minister to CHINA made representations to the Chinese Regent regarding the dismissal of Yuan Shih Kai, and he was assured that the dismissal of this official did not indicate a change in the government's policy (see *CHINA*). A Chinese loan of \$27,500,000 for the building of the Hankow-Szechuan Railroad was accorded originally to foreign bankers without any consultation with financiers in the United States. Following protests by the American bankers, with the support of the government, arrangements were made by the Chinese government, with the consent of the foreign bankers, that the United States should share in this loan.

In January three commissioners were sent to Washington from LIBERIA to ask for assistance in administering the affairs of its government. The President called upon Congress for an appropriation of \$20,000 to pay the expenses of such a commission, and this sum was granted. The commission was in Liberia during the year. See *LIBERIA*.

UNITED STATES MILITARY ACADEMY. A government institution at West Point, N. Y., founded in 1802, for the instruction of military officers. By law, 533 cadets were authorized to attend the Academy. The faculty included in 1909, 111 professors and instructors. In the library there were 77,000 books, manuscripts, maps, etc. During 1909 several important changes were made in the faculty. Colonel Edgar S. Dudley, Judge Advocate, U. S. A., professor of law, was retired as brigadier-general on June 14, by operation of law; Lieutenant-Colonel Walter A. Bethel was assigned to duty as professor of law on August 22; Lieutenant-Colonel Robert L. Howze, commandant of cadets and instructor in tactics, was relieved on February 1, 1909, and Colonel Frederick W. Sibley was assigned to succeed him. The course of instruction at the Academy is four years, and is largely mathematical and professional. The discipline is strict and the enforcement of penalties for offenses is inflexible rather than severe. About one-fourth of those appointed failed to pass the examination, and but little over half the remainder are finally graduated. In 1909, Constitution Island, in the Hudson River, was presented to the government for the use of the Military Academy, by Mrs. Russell Sage and Miss Anne Warner. Several cadets were dismissed during the year for hazing. The law, as it stands at present, makes

absolute dismissal the only penalty for this offense. Measures were introduced into the Sixty-first Congress, providing for a modification of the law, by making a distinction between the various grades of hazing, some of which should be punished by dismissal, and others by less severe measures.

UNITED STATES NATIONAL MUSEUM. An institution which originated in the Act of Congress of 1846, founding the Smithsonian Institution. It is the official custodian of the national collection, and its expenses are annually provided for through appropriations made by Congress. The Museum is especially rich in collections illustrating natural history, geology, paleontology, archaeology and ethnology of America. Many valuable accessions were made during the year from the expedition under the command of Theodore Roosevelt in British East Africa.

UNITED STATES NAVAL ACADEMY. A government institution at Annapolis, Md., founded in 1845 for the education of officers of the United States navy. The attendance in 1909-10 was 360, and the instructors numbered 96, with 11 heads of departments. Candidates and alternates to fill vacancies in the Naval Academy are nominated upon the recommendation of the Senator, Representative, or delegate in Congress, such recommendation being made by the fourth day of March, on the year following that in which notice is given by the Secretary of the Navy of a vacancy existing in the Naval Academy. If recommendation is not made by this date the Secretary of the Navy is authorized to fill the vacancy by the appointment of an actual resident of the State, Congressional District, or Territory in which the vacancy exists. During 1909 the construction of the new buildings of the Academy was completed at a cost of over \$10,000,000. Several unfortunate accidents occurred during the football season, and as a result, the schedule of the year was abandoned before the season closed. The superintendent in 1909 was Capt. John M. Bowyer and the commandant of midshipmen was Capt. C. A. Gove.

UNIVERSALISTS. A religious denomination, first established in the United States at Gloucester, Mass., in 1799. Its distinctive tenet is the final salvation of all men. The denomination numbered in 1909, 53,054 communicants, 904 parishes, and 689 ministers. The Sunday schools had a membership of about 50,000. The parish property was valued at \$10,958,008, and the parish expenses and contributions during the year amounted to \$1,202,624. The permanent funds of the general convention amounted to \$388,590. Foreign missions are carried on in Japan and Cuba, and domestic missions are sustained in fifteen States. The educational institutions under the auspices of the denomination include Tufts College at Medford, Mass.; St. Lawrence University at Canton, N. Y.; Buchtel College at Akron, Ohio; and Lombard College at Galesburg, Ill. At the final session of the General Convention at Detroit in October, 1909, commissions were appointed on social service, on the duty of the church to our foreign population and on the increase of the ministry. Delegates were also appointed to the International Council of Religious Liberals in Berlin in August, 1910. The next session of the General Convention will be held in Springfield, Mass., in October, 1911.

UNIVERSITIES AND COLLEGES. The attendance at American Universities continued to increase in 1909, seven gaining more than 300 students each. Eleven gained more than 1000 each since 1902, the largest increases being at Pennsylvania, Columbia and Cornell. Ten universities now register more than 4000 students each, five more than 5000, Columbia more than 6000, a number only once before passed by Harvard with 6013 in 1903. The comparative figures are: Columbia 6132, Harvard 5563, Chicago 5437, Michigan 5259, Cornell 5028, Pennsylvania 4857, Illinois 4502, Minnesota 4351, Wisconsin 4245, and California 4084. Yale has 3276, Stanford 1820, Princeton 1398, and Johns Hopkins 710. Six universities enrolled more than one thousand students in the summer session of 1909, namely: Chicago (3253, as compared with 2804 during the regular year), Columbia (1968), Harvard (1377), Michigan (1225), Indiana (1139), and Wisconsin (1133). Omitting summer session enrollment, the comparative figures for 1909 are: Columbia 4650, Michigan 4631, Pennsylvania 4608, Harvard 4518, Cornell 4514, Illinois 4173, Minnesota 4036, Wisconsin 3495, California 3454, and Chicago 3804. Eleven institutions have more than 1000 academic students, Harvard leading with 2720. Three of these eleven, all Western, have more undergraduate women than men. Cornell, Michigan and Illinois have each more than 1000 students of engineering. Throughout the schools of engineering, medicine and law, there is a slight decrease in attendance, apparently due to increased requirements for both admission and graduation. Columbia has the largest number of graduate students (991), of students in education (974), and in pharmacy (290). New York University leads in attendance in law (768) and in commerce (808); Northwestern in medicine and theology (216); Syracuse in music (758) and in art (124); Minnesota in agriculture (681), Illinois in architecture (240), Pennsylvania in dentistry (434), Minnesota in forestry (98), Ohio in veterinary medicine (202), and Missouri in journalism (65). Among the colleges Amherst (526), Bowdoin (419), Dartmouth (1197), and Haverford (157), show a slight decrease in numbers. All of the colleges for women show increase.

In geographical distribution of students in 1908-9, Eastern universities continued to be less local than Western, and the women's colleges less local than those for men. Columbia led in attendance in 14 States, Harvard in 13, Cornell in 10, and Yale in 9. Cornell led in the number of students from insular territories, California in Alaska, Cornell in Porto Rico, Pennsylvania in the Canal Zone. The number of foreign students continued to increase, Pennsylvania having 225, Columbia 166, Cornell 157, and Harvard 147—chiefly from Canada, China and Japan. In 1908-9 there were 500 Chinese students in the United States, 150 of them sent by the government. To these there were added in 1909 the first 47 who are to profit by the expenditure in American education of the remitted Boxer indemnity of \$11,000,000. The Chinese Students' Alliance of the Eastern States, had an attendance of 140 at its fifth annual conference in September. The Association of Cosmopolitan Clubs with 2000 members representing twenty universities and fifty countries, held its fourth annual convention in December.

United States and Canada. This may be considered an indication that the Rhodes scholarships have proved mutually profitable. The Bureau of American Republics planned an exchange of professors and students among the various American republics. A Cornell symposium indicated that many administrators advocate an interchange of professors among American universities, a feature already in favor in various summer sessions.

The third annual report of the Carnegie Foundation for the Advancement of Teaching, issued in March, recorded the addition during the year of seven institutions to its previously accepted list of 55, and the addition of 78 allowances to its previous 211 grants, the whole amounting to \$303,505 annually. Mr. Carnegie has increased his foundation from ten to fifteen million dollars in order that its benefits might be extended to State universities. Wisconsin, Minnesota, Michigan and Toronto have since been admitted. A memorial from fifteen denominational colleges requesting admission was not acted upon. In addition to its usual tabulation of extensive information concerning its accepted institutions, the report presented similar information concerning tax-supported institutions, recorded the progress of higher and more flexible requirements for college entrance, and recommended State supervision for all higher institutions. In June, the Foundation removed George Washington University from its lists, on the charge of reducing its endowment below \$200,000, failing to enforce its announced standards of admission, and retiring professors merely for reasons of economy.

The General Education Board received from Mr. John D. Rockefeller, in June, a gift of \$10,000,000, his previous gifts having been \$1,000,000 in 1902, \$10,000,000 in 1905, \$32,000,000 in 1907—a total of \$53,000,000, or about one-half of Mr. Rockefeller's gifts for education. Originally devoted to secondary, rural and negro education in the Southern States, since 1905 the board has extended its work throughout the country, coöperating with religious denominations, emphasizing the importance of established educational centres, encouraging endowments, and securing local coöperation. It has now awarded some \$4,000,000, on condition that its recipients receive approximately three times that sum from other sources. Grants for the year ending in May amounted to \$1,763,375, to twenty institutions, the largest being \$250,000 each to Johns Hopkins and Bryn Mawr.

The new Education section of the American Association for the Advancement of Science, published during the year the records of its important conferences, late in December, 1908, concerning international standards in education, the United States Bureau, the adjustment of the college to American conditions, psychological aids to education, and the problems of science teaching. The Association of American Universities considered the function of the college in the university. The National Association of State Universities defined a standard American college as requiring a four years' high school course of fourteen units for entrance to a four-year, or sixty-hour curriculum, the first half of general academic work, the

professional or technical school requiring for admission the previous completion of two years of collegiate work, and a graduate school prepared to give three years of work after the bachelor's degree in at least five departments. The same association recommended that high school teachers have a bachelor's degree, college professors the degree of doctor of philosophy or its equivalent, and professors in charge of graduate work, a record of successful research and publication and demonstrated power as teachers. The National Conference Committee on Standards of Colleges and Secondary Schools defined a unit for college entrance as a year's study of at least one hundred and twenty class hours in any secondary school subject.

The number of degrees of doctor of philosophy conferred in 1909 was 378. The largest numbers were conferred by Columbia (59), Yale (44), Chicago and Harvard (each 38). Three-fourths of all such degrees since 1898 have been conferred by Chicago (448), Columbia (436), Harvard (418), Yale (394), Johns Hopkins (360), Pennsylvania (286), and Cornell (237). Half of the degrees for 1909 were in science, especially chemistry. Of the 596 Ph. D's from Harvard since 1873, four-fifths are teachers. Having in mind current criticism of what President Hadley has called the "ordinary Ph. D. of commerce," a symposium of the doctors from Chicago approved a higher standard of general culture for the doctorate, and suggested a new non-research degree as a preparation for teaching. In special fields of research, astronomy and geography were emphasized by current interest in polar exploration, and archaeology by a gift of endowment to the Archaeological Institute, supported by various universities, and by the successes of Princeton and Pennsylvania expeditions in Arabia and Egypt. The American Institute of Electrical Engineers and the chief of the Federal Bureau of Chemistry found a general opinion among men in their fields that a knowledge of the classics was indispensable.

Among the professional schools it is estimated that 14,000 students are profiting by the \$100,000,000 invested in the study of agriculture. Investigation in this field continued to be highly fruitful and instruction was spread more and more widely through short courses, instruction trains, publications, and the development of agricultural high schools. Forestry held its first conference, in Washington on December 30 and 31, and other forms of conservation began to receive attention. In commerce more attention was devoted to investigation and fuller preparation was provided for teachers of commercial subjects. The slight decline in the number of students of engineering still leaves more than 1600 with generally higher standards and new developments in the direction of conservation and sanitation. The French minister of education has arranged to send numbers of advanced students in this field to American institutions. Columbia opened, through Teachers College, the first University School of Household Arts. Journalism developed steadily, the daily paper of the school of the University of Missouri becoming self-supporting. In medicine the requirements for admission continued

FOUR UNIVERSITY OR COLLEGE PRESIDENTS INSTALLED IN 1909

to approximate two years of college training. Medical training continued to enlarge both its scientific and clinical requirements, and the tendency increased for clinical professors to give their entire time to instruction and investigation in university hospitals, without outside practice. Among notable gifts for medical research during the year, Columbia received \$1,500,000, Johns Hopkins \$1,000,000, and Pennsylvania \$500,000 for the study, respectively, of cancer, insanity and tuberculosis. Philanthropy expanded as a field for university study. In theology the attendance began again to increase, the four largest seminaries each gaining 20 per cent. Several institutions were charged with higher criticism, infidelity and atheism. The New York Presbytery first refused and then accepted three graduates of the Union Theological Seminary whose orthodoxy was of an advanced character. Andover elected as president, the Rev. Albert Parker Fitch, a graduate of Harvard and of Union. At Princeton a petition of seventy-five students for "more intelligible" and more contemporary courses was rejected by the faculty, but accepted for consideration by the board of directors. The *Outlook*, inquiring of thirty-nine seminaries, found that eighteen had recently developed courses in the economic and sociological aspects of religion. The Music Teachers' National Association pointed out that 16 colleges now grant credit for music, both at entrance and for graduation, and 39 for graduation only, both recognitions having been gained within six years. Most credit is given for harmony, counterpoint and composition; the Association would increase the crediting of appreciation.

In May, Charles W. Eliot terminated his forty years' presidency of Harvard. In October that university inaugurated as his successor Abbott Lawrence Lowell, of a family long associated with Harvard, an athlete in college, graduating from Harvard and its Law School, then a lawyer and financier, author of standard legal texts and of *The Government of England*, and since 1900 professor of government in Harvard. His inaugural address emphasized the importance of the college, and in December the university publicly amended its scheme of free electives, by requiring a considerable amount of work in a single field, with the remainder well distributed under the direction of a committee and advisers. At the same time the faculties considered shortening the combined course for the A. B., and the M. D., from eight to six years. This sudden change of the university's most noted policies, strikingly illustrates the power of the executive in American education. In June James B. Angell concluded his thirty-eight years' presidency of the University of Michigan, during which he made that institution the exemplar for State universities. Dr. Angell refused the appointment of Chancellor of the University for that of president-emeritus. His successor has not yet been chosen. In June the Massachusetts Institute of Technology, inaugurated President Richard C. Maclaurin, and in October, Dartmouth inaugurated President Ernest Fox Nichols, both from professorships of physics in Columbia. The former in his inaugural emphasized the cultural value of scientific study, the latter the importance of the classics. In October, Colgate University inaugurated President Elmer Burritt Bryan, formerly General Superintendent of Education in the Philippines.

During the year, also, the Rev. Dr. William A. Shanklin was made president of Wesleyan University, the Rev. Charles A. Richmond, president of Union College and the Rev. Dr. Marion L. Burton, president of Smith College. The Regents of the University of Wisconsin were subject to political attack during the year, and the State Agricultural College of Oklahoma suffered the political reverses which overtook the University of Oklahoma in 1908. The dean of Clark College resigned, alleging encroachments by the president upon the will of the founder.

Academic discussion was prolific during 1909. The National Association of State Universities and the American Academy of Political Science, dwelt upon the dangers to academic freedom of political, denominational, plutocratic and corporate influence. Publicists who condemned universities for being unbusinesslike, or too businesslike, were reminded of the progress of many forms of extension, of the University of Cincinnati plan for giving engineering students practice in local manufactories, that a professor of political science was acting as an alderman in Chicago, and that the 1 per cent. of college graduates in our population provided 50 per cent. of our legislators. President Schurman, instancing the success of the newer, popular, practical institutions would make Cornell wholly a State university. A prominent editor held that our more academic scholarship would be confused until the nation comes to some decision concerning capitalism and socialism, government and liberty, materialism and other-worldliness. A statistician found that of 166 Harvard, Yale and Princeton seniors, whose families were in the New York Social Register, only one took high honors and only twenty others took honors. President Jordan, of Stanford, would prevent these older, social, cultural universities from becoming sanitaria or resorts for the tender rich by omitting the first two college years and emphasizing advanced work. President Wilson, of Princeton, added to his criticism of academic "country clubs," the saying that "the side shows have swallowed up the circus," and found alumni and parents indisposed to his reduction of student relaxations and his requirement of more study, with more instructors to enforce it. President Lowell, of Harvard, would adopt Princeton's plans and introduce the athletic and social principle of competition into scholarship, perhaps through the English pass and honor systems. President Hadley, of Yale, would add to this free scholarships for gifted students and would encourage investigation through research professorships. President Butler, of Columbia, reduced all of these problems to the fundamental difficulty of finding enough distinguished teachers and money to pay them properly. On the whole, he noted a new co-operation between secondary schools and colleges, and between college students and their instructors, and attributed current criticisms to enlarging ideals rather than to declining efficiency. This also was the view of several unacademic judges. Governor Hughes, of New York, found college men everywhere prominent and performing service worthy of their ideals. And Dr. Lyman Abbott, having visited forty universities and colleges during the last ten years, noted not only large intellectual, but also ethical and religious improvement.

Miami and Rutgers celebrated their one hundredth anniversaries in June, Clark its twentieth

fluence. The Association of Collegiate Alumnae published interesting records of its graduates and recommended more study of hygiene, sociology, economics, law and industry. Student government continued to be so successful that in several institutions it undertook to solve the difficult problem of extra-curriculum activities.

Under the guidance of the Society of College Directors of Physical Instruction, work in their field was conducted with an increasing relation to general hygiene. Some progress was made toward encouraging the practice of many sports by many students, instead of a few sports chiefly by experts. Twenty-six deaths from football during the season led to widespread demand for a reformation of that game, and the Inter-collegiate Athletic Association, in December, instructed its rules committee to bring about modifications that will reduce the chances of injury. No university, however, followed the action of Columbia, four years ago, in prohibiting intercollegiate football, although it was pointed out that since that time Columbia had prospered as never before, while Yale, the most conspicuous champion of the game, was declining in attendance.

There was, if possible, an increase in college dramatics. Harvard presented a professional performance of Schiller's *Maid of Orleans*, with Miss Maude Adams and 1500 performers. Students at Bryn Mawr gave the *Medea* of Euripides, Smith continued her Shakespearean presentations, and Barnard began them. Yale gave Sheridan's *Critic*, Wesleyan, Goldsmith's *Good-Natured Man*, and Williams, Marlowe's *Jew of Malta*. Scarcely an institution was without some such presentation, and Yale announced plans for building a theatre. Statistics were published indicating that the 32 fraternities for men have now 1036 chapters with 199,606 undergraduate and alumni members; the 18 sororities for women, 276 chapters with 20,269 members. Together they occupy some 1100 chapter houses valued at \$8,000,000, the investment of one university reaching \$500,000. Considering these totals, it is gratifying that, during the year, only Cornell, Yale and Brown found it necessary to consider restrictive legislation. Student dissipation required faculty attention at Yale and Cornell, and hazing at Illinois, New York University, Washington and Jefferson, and Muhlenberg. Brown suspended 28 students for cribbing, Chicago 100 for deficiency. The honor system in examinations was introduced at Union. A Roman Catholic Bishop charged several universities with undermining faith and teaching immorality, but the president of the Carnegie Foundation felt that the morals of our college students were better than ever before, and that there was an earnest acceptance of religious leadership; the Religious Education Association at its sixth convention in February reported encouraging progress.

Several distinguished educators died during the year: Simon Newcomb, formerly professor of astronomy at Johns Hopkins and director of the National Observatory; Carroll D. Wright, president of Clark College and former United States Commissioner of Labor; George Park Fisher, professor of ecclesiastical history at

cerning higher education were: *The American College*, by Abraham Flexner; *The Reorganisation of our Colleges*, by Clarence F. Birdseye; *America at College*, by Robert K. Risk; *The Real College*, by George Potter Benton; *The Teacher*, by George Herbert Palmer and Alice Freeman Palmer; *Lectures on Science, Philosophy and Arts*, published by Columbia University; *Hellas and Hesperia, or the Vitality of Greek Studies in America*, by Basil L. Gildersleeve; *The History of Higher Education of Women in the South*, by I. M. E. Blandin; *History of the Harvard Law School*, by Charles Warren; *Memories of Brown, The University of Virginia*, by David M. R. Culbreth; *Old Miami*, by Alfred H. Upham; *The Life and Letters of Nathaniel S. Shaler*; *The Letters, Lectures and Addresses of Charles Edward Carmon, Carla Wenckebach*, by Margarethe Müller; and *Charles W. Eliot*, by Eugene Kuehnemann.

UPPER SENEGAL-NIGER. A French inland colony in French West Africa (q. v.). It was formed in 1894 out of the territories of Senegambia and the Niger, less the former Senegal Protectorate, which was restored to Senegal. In 1907 the Dahomey districts of Fada, N'Gourma, and Say were added to the colony. Total area, 302,136 square miles; estimated population (1906), 5,058,856. The colony includes two-thirds of the course of the Niger, the valley of the Upper Senegal, and the Sahara northward to the southern territories of Algeria. The capital is Bamako, on the Niger. Imports and exports are included with those of Senegal, through whose ports they pass. A railway connects Kayes (in Senegal) with Koulikoro (347 miles), whence steamboats proceed up the Niger to Timbuktu. The colony has good systems of roads and telegraphs. A telegraph line is under construction from Timbuktu to Algeria. The colony is administered by a lieutenant-governor, who also controls the Military Territory of the Niger and who is under the Governor-General of French West Africa. Civil administration now prevails.

URUGUAY, officially styled REPUBLICA ORIENTAL DEL URUGUAY. The smallest republic of South America, on the Atlantic coast between Brazil and Argentina. The capital is Montevideo.

AREA AND POPULATION. The estimated area of the 19 departments constituting the republic is about 72,000 square miles. The census of March 1, 1900, showed a population of 915,647; the census of October 12, 1908, 1,042,668. Of the latter number, 181,085 were foreigners. The department of Montevideo (256 square miles) had 309,231 inhabitants; Canelones, 87,931; Colonia, 54,679; and Minas, 51,170. In December, 1908, the population of Montevideo was estimated at 316,000. The city of Montevideo had, according to the 1908 census, 291,466 inhabitants; other important towns were: Paysandú, 18,741 inhabitants; Salto, 17,656; Mercedes, 14,532; Florida, 12,470; San José, 12,103. In 1907 there were 6444 marriages, 33,657 living births, and 16,744 deaths. In the same year arrivals and departures by sea at Montevideo numbered 149,418 and 129,756, respectively.

EDUCATION. In 1900 about 46 per cent. of the inhabitants over six years of age were illit-

erate. Primary instruction is free and nominally compulsory. In 1907 there were 671 public primary schools, with an enrollment of 60,863 and an average attendance of 44,307, and 289 private primary schools, with enrollment and average attendance of 17,864 and 13,908, respectively. At the end of 1908 the number of public primary schools was 781. There are secondary schools at the departmental capitals, normal schools, and at Montevideo a university. Many religious seminaries are established throughout the country. In 1909 a law was enacted requiring a knowledge of English on the part of public school teachers.

INDUSTRIES. Uruguay's principal source of wealth is stock-raising. Only about 2.4 per cent. of the total area is under cultivation. One of the greatest needs of the country is believed to be the subdivision of the large estancias, or ranches, so as to allow an increase in the number of small farmers and a better system of tilling the soil. By far the most important crop is wheat, to which 617,000 acres were sown in 1908; 410,068 acres were planted to corn, and 64,000 to flax. Wine production was reported at 4,904,321 gallons. Other products, grown in comparatively small quantities, are oats, barley, olives, fruits, vegetables, and tobacco. The estimated number of live-stock in 1908 was as follows: Cattle, 8,000,000; sheep, 20,000,000; horses, 561,000; mules, 23,000; swine, 94,000; goats, 21,000. In the year ending October 1, 1907, 1,193,500 cattle were slaughtered; in the following year, 954,120. Hitherto mineral exploitation has been small. Some gold and coal are mined, and various other minerals are known to occur. The gold output in 1908 amounted to 2709 ounces. There is little manufacturing. The establishment of factories on a large scale is hindered by an insufficient supply of both fuel and materials.

COMMERCE. Special imports and exports of merchandise have been as follows, in gold pesos (the peso is worth \$1.034):

	1906	1907	1908
Imports.....	34,454,915	34,425,205	34,618,804
Exports.....	33,402,024	35,102,821	37,280,523

The principal imports are textiles, food-stuffs, various manufactured articles, and alcoholic beverages. Of the exports, about 90 per cent. are animal products. The principal exports in 1907, the latest year for which statistics are available, were valued as follows: Wool, 14,491,783 pesos; hides, 8,146,720; meat and extracts, 5,690,446; grease and tallow, 1,619,818; live animals, 1,090,602; hair, 324,150; cereals, flour, and pastes, 1,560,107. The leading countries from which imports are received are Great Britain, Germany, France, the United States, and Argentina. The countries taking the largest amounts of exports in 1907 were: Argentina, 7,295,105 pesos; France, 6,431,631; Belgium, 5,551,733; Germany, 4,647,866; Great Britain, 2,093,154; Brazil, 2,759,863; the United States, 1,803,320; Italy, 1,155,704; Cuba, 1,092,968.

COMMUNICATIONS. The length of railways at the end of 1908 is reported at 1447 miles (of which 780 miles were under state guaranty). During 1909 important extensions were under construction. In the summer of 1909 the government entered into a contract for the con-

struction of a line from San Luis, on the Brazilian border, to Colonia, on the River Plata, opposite to and 26 miles from Buenos Ayres. The total length is placed at 378 miles. This line forms part of a plan to secure rapid transit from New York to Pernambuco, Brazil, by high-speed steamers, and thence by rail to Valparaiso via Rio de Janeiro and Buenos Ayres. In 1909 the Brazilian portion of the line was already completed and in operation, with the exception of about 25 miles, and it was expected that the Transandine Railway (completing rail communication between Buenos Ayres and Valparaiso) would be open to traffic by the middle of 1910. The Uruguayan portion, which is financed by Americans, was to be completed within four years. River transportation in Uruguay is important and continues to develop. Montevideo is connected with Europe by 18 regular lines of passenger and freight steamers, and with the United States by six. During 1908 3084 steamers, of 6,783,788 tons, entered the port of Montevideo, and 259 sailing vessels, of 148,925 tons; and cleared 3014 steamers, of 6,642,128 tons, and 295 sailing vessels, of 160,157 tons. At interior ports 380 steamers, of 243,871 tons, entered, and 1076 sailing vessels, of 39,227 tons; and cleared 394 steamers, of 280,864 tons, and 1078 sailing vessels, of 48,541 tons. Of the entrances at Montevideo, 102 steamers and 50 sailing vessels were under Uruguayan register, and at the interior ports 194 steamers and 973 sailing vessels. Extensive port works are under construction at Montevideo, and in 1909 the government decided to develop the port of La Palma and to expend about \$1,000,000 in improvements on the port of Colonia. In 1908 there were 972 post-offices. In 1909 the telegraph offices numbered 319, with 4849 miles of line. Telephone lines in 1908 aggregated 16,568 miles.

FINANCE. The monetary standard is gold. The gold peso, a theoretical coin, is worth \$1.034. Revenue and expenditure for fiscal years have been as follows, in pesos:

	1906	1907	1908
Revenue.....	17,096,860	19,185,827	20,301,737
Expenditure... 17,095,820	19,179,936	20,257,462	

For the fiscal year 1909, revenue and expenditure were estimated at 21,079,883 pesos and 21,075,331 pesos, respectively. The principal estimated receipts were: Customs, 12,045,000 pesos; property tax, 2,682,929; factory and tobacco taxes, 1,709,964; trade licenses, 1,225,000. The principal items of estimated expenditure were: National obligations (including service of the debt and railway guarantees), 10,271,134 pesos; war and marine, 2,056,486; interior, 2,993,552; industries and public instruction, 1,568,065; finance, 1,370,980. On December 31, 1908, the public debt stood as follows: External consolidated debt, 118,897,728 pesos; international debts, 2,650,000; unified internal debt, 3,144,350; internal debt of 1902, 1,966,351; guarantees, 3,052,200; debt of liquidation, 205,075; total, 130,157,090. The service of the debt in 1908 amounted to 7,691,423 pesos. The Bank of the Republic, which was established in 1897 and is the only bank of issue, had, on December 31, 1907, issued notes to the amount of 13,084,056 pesos.

ARMY. According to the budget of 1908-9

fortress artillery, 1 battery of Maxim-Vickers rapid-fire guns, 1 battery of fortress artillery, 1 machine gun company, 9 regiments of cavalry, 7 squadrons of cavalry, 7 battalions of infantry, 9 companies of infantry, escort to the President, 1 company of engineers, military academy, military administration, military courts, and arsenal. In addition the police were organized on a military basis and numbered 5000. There was also a national guard of about 100,000, organized in 3 bases and having 120 cannon. The troops were armed with a Mauser rifle model of 1909, and had Schneider-Cunet field guns and Colt and Hotchkiss machine guns. Both Krupp and Schneider were competing in 1909 for the contract for increased armament of field guns.

GOVERNMENT. The executive authority is vested in a president, who is elected by the General Assembly for a term of four years and is assisted by a cabinet of six members appointed by himself and responsible to the Assembly. The legislative power devolves upon the General Assembly, which consists of two houses, the Senate (19 members, one member for each department, elected indirectly for six years) and the House of Representatives (75 members, elected by popular vote for three years). A permanent committee (two Senators and five Representatives) represents the Assembly during recess. The President in 1909 was Claudio Williman, who was inaugurated March 1, 1907.

UTAH. One of the Western Division of the United States. Its area is 84,900 square miles. The population in 1909, according to a Federal estimate made in that year, was 330,122.

MINERAL PRODUCTION. The value of the mineral products of the State in 1908 was \$26,422,121, a decrease of over \$10,000,000 from the value of the product of 1907, which was \$38,095,756. The chief decline was in the value of copper, of which 86,843,812 pounds, valued at \$11,463,383, were produced in 1908, as compared with 64,250,864 pounds, valued at \$12,851,377 in 1907. The coal production showed a decrease in 1908 from the preceding year. The total in 1908 was 1,846,792 short tons, valued at \$3,119,338, as compared with 1,947,607 tons, valued at \$2,959,769 in 1907. The latter half of the year showed a marked improvement over the first half, as a result of improved conditions in the metalliferous mining industry at the end of the year. There was a total of 130 coal-mining accidents during 1908. The total number of men employed in the mines of the State was 2664. The gold production in 1908 also showed a falling off from the production of the preceding year. The comparative figures are as follows: 1908, 190,922 fine ounces, with a value of \$3,946,700; 1907, 247,758, with a value of \$5,121,600. The production of silver and lead suffered a serious setback in 1908 on account of the general financial conditions and the closing of three smelters by decree of the Federal courts in smoke damage suits. The comparative figures are as follows: Lead, 1908, 42,455 short tons, valued at \$3,566,220; 1907, 61,699 short tons, valued at \$6,540,094; silver, 1908, 8,451,300 fine ounces, valued at \$4,520,600; 1907, 11,406,900 fine ounces,

The production of gold in 1909 was 185,993 fine ounces, with a value of \$3,844,800. The production of silver was estimated at 9,533,400 fine ounces, valued at \$4,958,900. This is an increase of 1,082,100 fine ounces over the production of 1908.

The copper output of 1909 showed a considerable increase over that of 1908.

AGRICULTURE AND STOCK RAISING. The acreage, production, and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 408,000 bushels, valued at \$355,000, from 13,000 acres; winter wheat, 3,240,000 bushels, valued at \$2,916,000, from 135,000 acres; spring wheat, 2,850,000 bushels, valued at \$2,565,000, from 100,000 acres; oats, 2,536,000 bushels, valued at \$1,319,000, from 55,000 acres; barley, 520,000 bushels, valued at \$343,000, from 13,000 acres; rye, 66,000 bushels, valued at \$46,000, from 3000 acres; potatoes, 2,700,000 bushels, valued at \$1,161,000, from 15,000 acres; hay, 1,088,000 tons, valued at \$9,792,000, from 375,000 acres. Utah ranks among the leading States in the production of sugar beets. The agricultural development of the State has greatly increased in recent years by irrigation projects carried on by the United States Reclamation Service. (See IRRIGATION.) The only important farm animals in the State are sheep. They were estimated at 3,177,000 in 1909. The wool clipped in 1909 was estimated at 16,615,-200 pounds.

POLITICS AND GOVERNMENT. On January 19 Reed Smoot was re-elected by the legislature as United States Senator. A State-wide Prohibition bill introduced into the legislature of 1909 was passed by the House, but was defeated in the Senate on February 20 by a vote of 13 to 5. In April the so-called coal land fraud cases, which had been in the Federal court for several years, were settled. Thousands of dollars had been expended by the government in the employment of special assistant United States attorneys; testimony had been taken before a special referee which covered hundreds of typewritten pages; then the government, through its Attorney-General, directed the United States District Attorney for Utah to dismiss the case, as also the indictments against individuals who had been, and others who were at that date, connected with the Utah Fuel Company, which it had been alleged secured vast tracts of coal lands in Carbon county by fraudulent means. The dismissal of the cases was conditioned upon the payment by the Utah Fuel Company to the government of \$200,000, the reconveying to the government of 1440 acres of coal lands and the payment of a fine of \$8000. The Utah Fuel Company gladly accepted this, as by complying the company secured absolute title to coal lands worth millions of dollars, title to which was involved in the same manner that the case at issue involved. Other cases of similar character, involving lands in Carbon and Emery counties, in which other persons than those connected with the Utah Fuel Company were indicted, were dismissed, the government officials being unable to sustain their charges that the lands had been secured through fraud. All the

cases thus far have, in so far as the government is concerned, proven fiascos.

As a result of the complaints made by business men, commercial organizations, and other citizens of the State that the cities of Ogden, Salt Lake and Provo had been for some time subject to unjust and discriminative freight rates by the railroad companies constituting the principal common carrier service of that section to and from the Pacific coast on the West, and the territory east of the Rocky Mountains, the Attorney-General of the United States, to whom petition for relief had been made, requested the Interstate Commerce Commission to undertake formal proceedings to ascertain what grounds there were for these complaints.

As a result of the election on November 2 Salt Lake City was carried by the American party by a large plurality. The American party was formed to combat Mormon dominance in politics. Its candidate for mayor received about 8000 plurality and a majority of about 2000 over both Democratic and Republican nominees. The entire American general ticket was elected over a fusion of Republicans and Democrats. The Americans elected eight out of ten councilmen, which will give them two-thirds of the council.

LEGISLATION. Among the measures enacted by the legislature of 1909 are those noted below: A State board of land commissioners is authorized to conduct experiments in sinking wells for culinary and domestic purposes on arid land. The right of eminent domain is extended to sites for mills, smelters and other works for the reduction of ores. It is made a misdemeanor for superintendent, foreman, or boss to receive any valuable consideration for employing a person or continuing him in employ. A measure was enacted preventing the portrait of a person being used without his consent for advertising purposes. Irrigation districts are authorized. A dairy and food bureau is authorized with power to enforce sanitary measures. A commission for the conservation of natural resources is created and provision is made for the protection against disease among live-stock.

OFFICERS: Governor, William Spry; Secretary of State, C. S. Tingey; Treasurer, David Mattson; Auditor, Jesse D. Jewkes; Attorney-General, A. R. Barnes; Superintendent of Education, A. C. Nelson; Commissioner of Insurance, G. B. Squires—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Daniel N. Straup; Justices, W. M. McCarty and J. E. Frick; Clerk, H. W. Griffith—all Republicans.

The State Legislature of 1909 was composed of 18 Republicans in the Senate, and 43 Republicans and 2 Democrats in the House. The State representatives in Congress will be found in the section *Congress* of the article **UNITED STATES**.

VACCINATION. See **SMALLPOX AND VACCINATION**.

VALPARAISO UNIVERSITY. An institution of general and higher learning at Valparaiso, Ind., founded in 1873. The attendance in 1909 was 5376, with 186 members of the faculty. During the year the following changes in the faculty took place: Professor W. F. Ellis was added to the department of pedagogy; Professor Ray Yeoman to the de-

partment of civil engineering and Professor A. W. Linton to the department of pharmacy. There are in the library about 10,000 volumes. The productive funds of the University amount to about \$1,000,000 and the total income to about \$225,000. The president is Henry B. Brown, A. M.

VASSAR COLLEGE. An institution for the higher education of women, at Poughkeepsie, N. Y., founded in 1861. The attendance in 1909 was 1039 students, with 101 members of the faculty. The number of students is limited to about 1000. There were in the library 66,000 volumes. The sum of \$12,500 was received from the alumni toward the general endowment of the college. There were no changes of importance in the faculty during the year. The total productive funds of the college amount to about \$1,360,000, and the income to \$600,000.

VAUGHAN, LAWRENCE J. A Roman Catholic cleric and writer, died May 10, 1909. He was born in Newark, N. J., in 1864, and was educated at St. Benedict's College, Newark, and studied at other colleges in the West. He adopted the theatrical profession, but later studied for the priesthood. He was ordained priest in 1899. He was the founder of St. Joseph's Roman Catholic Students' Fund for the education of poor boys, and also of the Altoona Institute, a school for boys and girls. From 1903 he was chiefly occupied in lecturing. He wrote poems, and several plays, among them, *Disowned*; *Alice and Alexander*; *Prince Carl*, and *Nance of Old Thunder*.

VENEZUELA. A South American republic, on the Caribbean Sea, between Colombia and British Guiana. The capital is Caracas.

AREA AND POPULATION. The estimated area is about 363,800 square miles. The official estimate of January 1, 1909, placed the population at 2,661,569. The principal cities are Caracas, with about 90,000 inhabitants; Valencia, 40,000; Maracaibo, 35,000; Barquisimeto, 32,000. In 1908 there were 6050 marriages, 71,033 births, 57,088 deaths; immigrants numbered 4280, and emigrants, 3979, against 8350 and 7438 respectively in 1907.

Education is in a very backward condition. Primary instruction is free and nominally compulsory. The reported number of public primary schools on June 30, 1908, was 1150, with an enrollment of 35,777. Besides private subventioned colleges, there are 33 national colleges providing secondary and higher instruction, and a university at Caracas and another at Mérida. The state religion is Roman Catholicism.

INDUSTRIES. Agriculture and stockraising are the most important industries. Parts of the country are rich in metals and other minerals, but exploitation is slight. Manufacturing industries are negligible. The area under coffee is estimated at 200,000 acres; production in 1907, 42,806 tons. The cacao output amounts to over 14,000 tons, and sugar about 3000 tons. Other products of some importance are rubber, tobacco, rice, and wheat. The live-stock are estimated at over 6,000,000 head, including over 2,000,000 cattle, 1,600,000 swine, and 1,600,000 goats. Pearl fishery in the vicinity of Margarita Island has been a remunerative industry, but threatened extinction of the beds has necessitated the repeal of the pearl-fishery concession. Of the mineral deposits, gold (especially in the Yuruari region),

abolished in 1908, was reestablished, and the cigarette monopoly was abolished. General economic development in Venezuela is retarded by lack of transportation facilities, and by the frequently unsettled political conditions.

FOREIGN COMMERCE. Imports and exports for fiscal years have been valued in bolivars as follows:

	1906	1907	1908
Imports.....	50,191,379	53,858,199	54,421,000
Exports.....	81,940,205	81,282,837	78,145,000

The principal articles of import are cereals, flour, and kerosene, chiefly from the United States; textiles, machinery, hardware, and coal, largely from Great Britain; rice and cement, largely from Germany; wines and silks, chiefly from France. The leading exports in the fiscal year 1908, were valued as follows, in bolivars: Coffee, 35,243,000; cacao, 20,929,000; rubber, 5,286,000; hides and skins, 4,399,000; cattle, 3,951,000; gold, 1,660,000; asphalt, 1,062,000. Of the coffee export, about one-half goes to the United States; of the cacao, about two-thirds to France; and most of the cattle to Cuba. The trade by countries in the fiscal year 1908 was valued as follows, in bolivars:

Countries	Imports	Exports
Great Britain	19,060,000	7,239,000
United States	15,365,000	27,762,000
Germany	9,745,000	4,541,000
Netherlands	4,765,000	2,818,000
Spain	3,078,000	2,948,000
Italy	1,521,000	478,000
France	789,000	27,463,000
Cuba		3,020,000
Other Countries	88,000	856,000

COMMUNICATIONS. The length of railways is reported at about 540 miles. This figure is exclusive of the Central Railway extension to Ocumare, which was under construction, and a part completed, in 1909. In 1908 the railways carried 413,002 passengers (traffic valued at 1,306,539 bolivars) and 183,834 metric tons of freight; the total income was 8,878,127 bolivars, and the expenditures 8,123,207 bolivars. A regular steamer service is maintained on the Orinoco, Apure, and Portuguez between Ciudad Bolívar, the principal port on the Orinoco, and the interior, as well as points along the coast. In 1909 the government entered into a contract for the establishment, beginning at the port of Pericos on the Orinoco, of a combined service of steamers and automobiles along the Atures and Maipures (Orinoco affluents) for both passenger and freight transportation. There entered the ports in 1908, 645 vessels, of 937,080 tons. The merchant marine in 1909 consisted of eight steamers, of 2040 tons, and 18 sailing vessels, of 2836 tons. In 1908 the post-offices numbered 230, and the telegraph offices 169, with 4756 miles of line.

FINANCE. In 1906 revenue and expenditure amounted to 49,293,067 bolivars and 51,874,604 bolivars respectively (the bolivar is equivalent to the franc, or 19.3 cents). Customs

and other public institutions. For the fiscal year 1907, the estimated revenue and expenditure balanced at 42,307,700 bolivars; for the fiscal year 1908, 50,803,142 and 49,375,196 respectively; for 1908-9, 44,092,625 and 37,205,485 respectively. On July 31, 1908, the debt stood as follows: Diplomatic debt of 1905, 132,049,925 bolivars; diplomatic (French, Spanish, Dutch), 7,014,569; French (1903-4), 5,733,490; internal consolidated, 63,171,818; unconsolidated in circulation, 4,561,742; total, 212,531,544 bolivars.

ARMY. The active army was composed of 20 battalions of infantry, each of a normal strength of 400 men, 8 batteries of artillery of 200 men each, and a battalion of marines.

GOVERNMENT. Venezuela is one of the five American republics having the federal form of representative government, the others being the United States, Mexico, Brazil, and Argentina. A new constitution was promulgated August 5, 1909. Under the former constitution, of April 27, 1904, Venezuela was divided into 13 states, five territories, and a Federal district. According to the new constitution, the country is divided into 20 states, two territories, and a Federal district. The states are Apure, Aragua, Anzoátegui, Bolívar, Carabobo, Cojedes, Falcón, Guárico, Lara, Monagas, Mérida, Miranda, Nueva Esparta, Portuguez, Sucre, Táchira, Trujillo, Yaracuy, Zamora, and Zulia. The territories are Amazonas and Delta Amacuro. The constitution vests the executive authority in a president, elected by the Congress for a term of four years. The Congress also selects a Council of Government, consisting of 10 members, to serve for four years, and the Council choose the two Vice-Presidents. The legislative power devolves upon a congress of two houses, the Senate and the Chamber of Deputies. The Senate consists of 40 members, two for each state, elected for four years. One deputy is allowed for each 35,000 inhabitants; and any state having less than 35,000 inhabitants is entitled to one deputy, or, having an excess of 15,000, to two deputies. Deputies are elected for four years. The President in 1909 was General Juan Vicente Gómez. When President Cipriano Castro left the country in December, 1908, General Gómez, as Vice-President, became Acting President; on August 13, 1909, he assumed office as President.

HISTORY. The chief events of 1908 were the trouble between Venezuela and the Netherlands, resulting in the severance of diplomatic relations and in reprisals by Dutch war vessels on the Venezuelan coast, the departure of President Castro after nine years of misrule to Europe, and the succession of General Gómez to the Presidency. The latter immediately took measures to restore friendly relations with the Netherlands as well as with other Powers which the Castro government had offended. In March, 1909, the High Federal Court of Venezuela decided that President Castro had been guilty of an attempt to assassinate acting-President Gómez, and he was therefore suspended from the Presidency. A little later Castro started from Bordeaux, France, for the West Indies. At Trinidad he was refused a landing by the British authorities. Castro then landed at

Fort de France on the island of Martinique, but received notice from the French Governor that he must leave in nine hours. He refused to do this and was carried to his vessel by gendarmes. At the same time it was announced that the Danish authorities at St. Thomas in the Danish West Indies would refuse him a landing, and his wife and her party were refused a landing at La Guayra or means of communicating with the shore. (See *NETHERLANDS*, paragraphs on *History*.) As a result of the reports of the United States Special Commissioner, William I. Buchanan, a protocol was signed on February 15 between Venezuela and the United States in settlement of the long-standing differences between the two countries. By this the claims of the United States and Venezuela Company, the Orinoco Steamship Company and the Orinoco Corporation were to be submitted to the Hague Tribunal; the claim of a French citizen who had taken out American naturalization papers and had been expelled by former President Castro was settled by an award of cash. The much discussed claim of the New York and Bermudez Asphalt Company had previously been settled by direct negotiation through the efforts of Commissioner Buchanan. By this, the company's property was restored to it; and the suit against it for its alleged support of the Matos rebellion was dropped. On the other hand, the company paid the government a cash indemnity and a certain fixed annual contribution. See *ARBITRATION*, *INTERNATIONAL* and *UNITED STATES*, *Foreign Relations*.

VERMONT. One of the North Atlantic Division of the United States. Its area is 9564 square miles. The population in 1909, according to a Federal estimate made in that year, was 353,739.

MINERAL PRODUCTION. The chief mineral products of the State are stone in its several varieties. Of these marble and granite form the greater part of the production. In the quarrying of marble Vermont greatly surpasses any other State. The value of this product in 1908 was \$4,879,980, as compared with a value in 1907 of \$4,596,724. Granite was produced in 1908 to the value of \$2,451,933 and in 1907 to the value of \$2,893,889. A small quantity of limestone is also produced. The total value of the mineral products of the State in 1908 was \$7,152,824 and in 1907, \$7,313,739. The State ranks first in the production of stone, surpassing Pennsylvania, which in 1907 held the first place. Slate is produced in large quantities. The value of this product in 1908 was \$1,710,491, as compared with a value of the product of 1907 of \$1,477,259. Manufactures of clay products in 1908 were valued at \$89,064, as compared with a value of \$109,500 in 1907. Among other products are mineral waters, coal products, lime, metallic paint, sand and gravel, talc and soapstone. The value of the mineral products of the State in 1908 was \$9,313,120, as compared with a value of the product in 1907 of \$9,464,857.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops in the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 2,405,000 bushels, valued at \$1,756,000 from 65,000 acres; oats, 2,608,000 bushels, valued at \$1,304,000 from 81,

000 acres; barley, 450,000 bushels, valued at \$346,000 from 15,000 acres; rye, 31,000 bushels, valued at \$31,000 from 2000 acres; buckwheat, 176,000 bushels, valued at \$134,000 from 8000 acres; potatoes, 4,050,000 bushels, valued at \$2,046,000 from 30,000 acres; hay, 1,099,000 tons, valued at \$16,155,000 from 879,000 acres; tobacco, 335,000 pounds, valued at \$50,250 from 200 acres. The hay crop, which is the most valuable agricultural product of the State, showed a slight increase in 1909 over 1908, when the production was 986,000 tons. The acreage increased about 9000. The farm animals in the State on January 1, 1910, were estimated as follows: Horses, 94,000; dairy cows, 285,000; other cattle, 210,000; sheep, 229,000; swine, 95,000. The wool clipped in 1909 was estimated at 1,155,680 pounds. The output of dairy and poultry products of the State is large.

EDUCATION. The school enrollment in 1909 was 66,174. There were 311 male teachers, and 2826 female. The average monthly salaries of male teachers in high schools was \$95.72, and of female teachers, \$47.12. In the elementary schools the average for male teachers was \$34.52 and for female teachers, \$32.87. Among the changes in school policy in 1909 was the abolition of the county system of examination of teachers. Examinations are now conducted by union superintendents. Provision was also made during the year for aid in industrial education. The total expenditures for education during the year was \$1,807,654.

CHARITIES AND CORRECTIONS. Among the charitable and correctional institutions of the State are the Soldiers' Home, Brattleboro Retreat, State Hospital for the Insane, House of Correction and State Prison. There are also orphans' homes and homes for dependent children, and other similar institutions which are maintained privately. The Governor of the State is, by authority of his office, commissioner of the deaf, dumb, blind, idiotic, feeble-minded or epileptic children of indigent parents. A sum not exceeding \$20,000 is annually appropriated for the instruction of these beneficiaries in institutions in other States. There is also a sanatorium for consumptives at Pittsford, Vermont.

POLITICS AND GOVERNMENT. Town and city elections were held throughout the State on March 2, the vote on license being the common point of interest. The number of places voting for license to sell intoxicating liquors was 25, compared with 27 in 1908. Among the larger towns voting for license were Burlington, St. Albans, Northfield, Bennington, Winooski and Vergennes. Rutland changed from license to no-license. The contest for mayor in Burlington was close. James E. Burke defeated Mayor W. J. Bigelow by 18 majority. Mr. Burke has run for mayor eight times and has won five elections. Citizens' candidates were elected in Barre, Montpelier and St. Albans.

OTHER EVENTS. The year was rendered memorable in Vermont by the tercentenary celebration of the discovery of Lake Champlain, by the great French explorer Samuel de Champlain, held under the auspices of the State. The chief feature of the observance, held during the week beginning July 4, was the celebration in Burlington, which was participated in by President Taft and other representatives of the Federal government, Ambassador Bryce, of Great Britain; Ambassador Jusserand, of France;

below: A State Board of Agriculture and Forestry was created and provision made for the inspection of nursery stock brought into the State. Several measures improving and extending the educational system were passed and provision was made for a beginning in manual training schools. Important amendments were made for the better enforcement of the child labor law. An appropriation of \$75,000 a year for permanent highways was authorized. A public service commission was created to which any person aggrieved by a public service company may appeal. Cities and towns were given power to compel a pure milk supply. Precautions were taken against the spread of tuberculosis. The act to regulate the practice of medicine and surgery was amended to make it more effective against charlatans, but it does not apply "to persons who merely practice the religious tenets of their church without pretending a knowledge of medicine or surgery."

OFFICERS: Governor, George H. Prouty; Lieutenant-Governor, John H. Mead; Secretary of State, Guy W. Bailey; Treasurer, Edward H. Deavitt; Auditor, Horace F. Graham; Bank Commissioner, Frank C. Williams; Attorney-General, J. G. Sargent; Superintendent of Education, Mason S. Stone; Commissioner of Insurance, E. H. Deavitt, and Guy W. Bailey; Commissioner of Agriculture, O. L. Martin—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, John W. Rowell; Assistant Justices, Loveland Munson, John H. Watson, Seneca Haselton, George M. Powers; Clerk, M. E. Smilie—all Republicans, except Haselton.

The State Legislature of 1909 was composed of 28 Republicans and 2 Democrats in the Senate, and 201 Republicans, 39 Democrats, 3 Independent Democrats, and 1 Independent Republican in the House. The State representatives in Congress will be found in the section *Congress* of the article **UNITED STATES**.

VETERINARY SCIENCE. The number of veterinary schools in this country, graduates of which are admitted to the United States Civil Service examinations for veterinary inspectors in the Federal service, has continued to increase, four additional schools qualifying during the year, making a total of fifteen now in session in the United States and Canada. The great demand by the public for a better meat inspection, for milk from healthy animals, etc., has led to a great demand for veterinary inspectors, resulting in an increased attendance at veterinary schools. Veterinary education suffered a great loss during the year in the death of Dr. Leonard Pearson, Dean of the Veterinary Department of the University of Pennsylvania.

TUBERCULOSIS. Tuberculosis continued to receive more attention than any other disease. In this country the Federal Department of Agriculture and many of the States are conducting investigations along lines leading to the control and eradication of the disease from among farm animals. Numerous workers have studied the new method of applying tuberculin. A simultaneous application of the ophthalmic and dermic tests followed by the subcutaneous test

dairy cattle are most susceptible to the affection, since they are usually kept under artificial conditions and often subject to high pressure of feeding in dark, damp, badly ventilated barns, which reduces their resistance to disease.

The Federal Bureau of Animal Industry conducted investigations to determine the prevalence and extent of the disease among dairy cattle, the tuberculin test being applied to numbers of cattle in several sections of the country. Out of 8809 cattle in nine States and the District of Columbia thus tested during the fiscal year 744, or 8.45 per cent. reacted as tuberculous. A much higher proportion of disease was found among dairy cattle supplying milk to cities than among animals offered for interstate shipment, the proportion in the former class being about 14 per cent.

Tuberculosis in swine is largely due to feeding dairy by-products from infected cows. An investigation of this disease during 1909, as it simultaneously affected hogs and poultry on an Oregon ranch, demonstrated that its transmission from fowls to swine readily occurs. Wisconsin has passed a law which requires the pasteurization of all dairy by-products returned to the farm from creameries and cheese factories, and also requires that breeding and dairy cattle brought into the State shall be accompanied by a tuberculin test certificate showing freedom from the disease. Twenty-six States already have laws prohibiting the shipment of tubercular cattle from State to State.

It seems definitely established that there are two distinct types of tubercle bacilli, the human and the bovine, which in a majority of the cases investigated have characteristics sufficiently fixed so that mutation from one type to the other does not occur. In a series of 306 cases among human beings the bovine type of the bacillus was demonstrated in 20 per cent. Thus, aside from the great loss from tubercular cattle, swine, and other animals, estimated at not less than \$15,000,000 annually, it is seen that the dangers from bovine tuberculosis to man are sufficiently great to warrant strict precautions against it. One of the leading investigators of the disease concludes that for the protection of public health it is imperatively necessary that regulations should be made requiring either that all milk be obtained from cows free from the disease, stabled, milked, pastured, etc., in an environment free from tuberculous infection, or that it be sterilized or pasteurized before it is used as a beverage or in the manufacture of butter and other dairy products. Various cities have passed stringent regulations prohibiting the sale of milk and its products from any but cows free from tuberculosis. Such an ordinance became effective in Chicago on January 1, 1909, since which time many other cities have followed the example. Fourteen cities in Wisconsin are said to have passed ordinances requiring the tuberculin test of all cows whose milk is sold; thus, if properly enforced, over 25 per cent. of the population of the State will be protected by these ordinances.

FOOT-AND-MOUTH DISEASE. Foot-and-mouth disease, or aphthous fever, which was first observed early in November, 1908, in a herd of cattle near Danville, Pa., was eradicated and the

Federal quarantine removed on April 24, 1909. In this work 572 men were employed by the Government, of whom 159 were veterinarians. In addition to \$300,000 expended by the Bureau of Animal Industry, about \$112,000 was spent by the four affected States. The outbreak was found to have originated from calves used for the propagation of smallpox vaccine. It seems probable that the contamination was originally introduced with vaccine virus imported from Japan in 1902, and that the New England outbreaks of that year originated from the same source. An outbreak of the disease was reported to have occurred in Edinburgh, Scotland, in 1908, in which 244 animals were destroyed before the disease was stamped out. The infection was traced to baled hay which had been imported from Holland fully 2½ months before it was brought in contact with the animals which developed the disease.

TEXAS FEVER. Under the appropriation of \$300,000 for the fiscal year ending June 30, 1909, the work of exterminating the cattle tick was continued, 13,544 square miles of territory being released from quarantine. Since the beginning of the work in the summer of 1906 areas aggregating 71,336 square miles have been released as the result of the eradication of the tick. A great improvement has already resulted from this work. More cattle are being raised and a better grade of breeding stock is being introduced; calves grow faster and cattle put on flesh more rapidly during the grazing season, while higher prices are being obtained when marketed. The difference between the prices realized for cattle from the tick infected region and the prices of cattle of similar grades from above the quarantine line ranges from \$2.25 to \$5 a head at the principal northern live-stock markets, without taking into account the improvement in quality and weight of cattle because of the eradication of the ticks. As more than 1,000,000 cattle from the quarantined area are annually sold in these markets, the extermination of the ticks means an annual increase of at least \$3,000,000 in the prices obtained for southern cattle sold in northern markets. The tick which transmits the disease in this country does not occur in England, but the two species which do occur have been found to play the same rôle. Nuttall and Hadwen, working in England, have found that trypanblau promises to be an efficient remedy for this disease in cattle, as it has been in canine piroplasmosis.

HOG CHOLERA. Investigations of the year have shown that the process of hyperimmunization, which is necessary in the production of serum, and which was first carried out by injecting diseased blood subcutaneously into the immune hog, can be accomplished quite as well by intravenous injection. In this way the highly potent protective serum is produced by using only half the quantity of diseased blood required if subcutaneous injections are given. In the case of immunes treated intravenously the carcasses of the hogs killed for serum are in excellent condition and appear to be entirely suitable for food. As the cost of hogs is one of the chief items of expense in serum production, this intravenous injection of immunes is regarded as a very valuable improvement, tending to reduce the cost of the serum very materially. Twenty States have now undertaken the preparation of the serum to a greater or less extent. Eleven States have each appro-

priated sums of money exceeding \$1500 per annum for starting the serum production for the benefit of hog raisers, and 25,000 hogs have been treated with serum so prepared. It is thought that the extensive use of this serum will result in the eradication or at least the elimination, of hog cholera as a serious menace to hog-raising interests.

VICTORIA. A State of the Australian Commonwealth. Area, 87,884 square miles. Estimated population (December 31, 1908), 1,273,313. Capital, Melbourne, with an estimated population (December 31, 1908), including suburbs, of 549,200. The executive power is exercised by a governor, appointed by the Crown and assisted by a responsible ministry of 11 members. The Parliament consists of the Legislative Council (34 members, elected for six years) and the Legislative Assembly (65 members, elected for three years). The Governor in 1909 was Sir Thomas D. Gibson-Carmichael; the Premier and Minister for Labor, John Murray. For statistics and other details, see AUSTRALIA.

HISTORY. The Ministry of Sir Thomas Bent was overthrown early in January by a majority of 12 chiefly on account of personal charges of corruption, and a coalition of Ministerialists and Independents agreed on a cabinet under the premiership of Mr. John Murray and representing both parties. It was opposed to the Labor programme and its policy was announced as having for its main feature progressive land legislation including a land tax. On the opening of Parliament on June 30 the Governor, Sir Thomas Gibson-Carmichael announced that the government, recognizing the need of changing the incidence of land taxation, would introduce a bill to tax unimproved land values and so framed as to encourage the cultivation and settlement of arable land while at the same time meeting the shortage in the revenues; he also promised a bill for the establishment of a State coal mine at Powlett, where valuable deposits have been found. He announced that the government would apply itself to the problem of irrigation. A bill for amending the State Closer Settlement Act was brought in in July and reached its second reading in October. It provided for advances to settlers not to exceed £200,000 a year and a grant of £500,000 a year for three years to purchase lands for closer settlement. It gave the authorities the right to take the land if the land-owner would not sell it, the compensation to be afterwards fixed by a Judge of the Supreme Court. In the Powlett River basin, which, according to the government's plan was to be kept for the State, experimental bores disclosed seams with an estimated yield of 32,000,000 tons. Great damage to property and some loss of life resulted from the heavy rains which on August 19 caused the most serious flood known for forty years. Large areas, including a number of towns, were covered with water.

VIRGINIA. One of the South Atlantic Division of the United States. Its area is 42,267 square miles. The population in 1909, according to a Federal estimate made in that year, was 2,032,507.

MINERAL PRODUCTION. The chief mineral products of Virginia are coal and iron. The State, in common with most of the other States mining coal, showed a decreased production in 1908 over 1907. There were produced in the former

quantity of coal made into coke. Virginia is the first State from which bituminous coal was mined in the United States. It was taken from what is usually termed the Richmond Basin, a small area in the southeastern portion of the State near the city of Richmond. The Black Mountain Field, to which a railroad was built in 1905, shows a greatly increased production. There were employed in the coal mines of the State in 1908, 6208 men, as compared with 6670 in 1907. There were no strikes or lockouts during 1908, the fifth year in succession in which this condition existed. There were manufactured in 1908, 1,162,051 short tons of coke, valued at \$2,121,980, as compared with a production of \$1,545,280 tons, with a value of \$3,765,733 in 1907. There were 19 coking establishments, with 4853 ovens built and 158 building. A small amount of copper is mined, the production in 1908 being 24,775 pounds, valued at \$3270. Gold was produced to the amount of 118.57 fine ounces, valued at \$2451, and a small amount of silver was also mined. The State contains deposits of zinc and in 1908 1,410,961 pounds of spelter were produced with a value of \$66,315. Lead also is found and in 1908 76,190 pounds were produced. Clay products to the value of \$1,499,130 were produced, as compared with a value of \$1,611,335 in 1907. Stone is mined in large quantities, chiefly granite and limestone. Other important products are coal products, talc and soapstone, pyrite, mineral waters, lime, slate, sand and gravel, manganese ores and barytes. The value of the mineral products of the State in 1908 was \$13,127,395, as compared with a value of the product in 1907 of \$19,313,182.

The coal production of the State in 1909 was nearly equal to that of 1907 and surpassed that of 1908.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 47,328,000 bushels, valued at \$35,023,000 from 2,040,000 acres; winter wheat, 8,848,000 bushels, valued at \$10,175,000 from 790,000 acres; oats, 3,800,000 bushels, valued at 2,052,000 from 200,000 acres; barley, 86,000 bushels, valued at \$61,000 from 3000 acres; rye, 184,000 bushels, valued at \$155,000 from 15,000 acres; buckwheat, 378,000 bushels, valued at \$287,000 from 21,000 acres; potatoes, 5,520,000 bushels, valued at \$3,864,000 from 60,000 acres; hay, 606,000 tons, valued at \$8,000,000 from 460,000 acres; tobacco, 120,125,000 pounds, valued at \$10,210,625 from 155,000 acres. In the production of tobacco the State ranks third, being surpassed only by Kentucky and North Carolina. The tobacco crop of 1909 was considerably larger than that of 1908, which was 114,100,000 pounds. The acreage increased from 140,000 to 155,000 acres. The number of farm animals on January 1, 1910, was estimated as follows: Horses, 323,000; mules, 54,000; dairy cows, 297,000; other cattle, 578,000; sheep, 522,000; swine, 774,000. The wool clipped in the State in 1909 was estimated at 1,843,200 pounds. The cotton crop of 1909-10 was estimated at 10,000 bales.

FISHERIES. The value of the product of the

were taken for market purposes, and 1,402,900 bushels, valued at \$381,120, were taken for seed-ing purposes. Next in point of value was shad, of which 7,314,400 pounds, valued at \$486,070, were taken. Of menhaden, 190,089,200 pounds were taken, valued at \$429,060. Other impor-tant fish taken were squeteague or trout, \$139,300; hard crabs, \$238,950; soft crabs, \$86,590; croakers, \$118,810; alewives, \$170,840; and Spanish mackerel, \$24,720. There were engaged in the fisheries of the State 10,324 independent fishermen, with 9742 wage-earning fishermen em-ployed. The vessels employed numbered 946, valued at \$1,155,028.

POLITICS AND GOVERNMENT. There was no meeting of the legislature in 1909 as the meet-ings are biennial and the last was held in 1908. Local elections were held during the year on the question of license or no-license. On July 8 the town of Bristol voted for license by a majority of 38 votes out of a total of 458 votes cast. The result of this vote gives the States of Virginia and Tennessee a shipping point for liquor. It was asserted by the advocates for liquor that the city would gain great wealth by reason of the vote as it becomes the ship-ping point for Virginia, Tennessee, Western North Carolina, Alabama, Georgia and Mis-sissippi. The city is half in Virginia and half in Tennessee. The Tennessee side voted for no license in 1908. In December, 1908, the city of Roanoake voted for no-license, but the elec-tion was set aside, and the no-license leaders, on August 16, presented a petition containing more than 600 names, to Judge W. R. Staples of the Corporation Court asking him to order a local option election for the city in the latter part of September. The no-license party thereupon asked for a writ of error to prevent the election. This was refused by the State Supreme Court and the election was held on September 30, the result being no-license. In June the city of Petersburg voted to retain the saloons, giving a majority of nearly 500 out of a vote of about 2000. On July 22 the city of Staunton voted for no-license, but the election was contested and on September 22 the court upheld the re-sult of the election, deciding in favor of no-license by 22 votes. On August 24 the city of Harrisonburg voted to retain the saloons by a majority of 43 out of a total vote of 714. On September 30, Rocky Mount district, of Franklin county, voted for license by a majority of three. Buena Vista voted "dry" December 23 by a decided majority.

On January 26 the Supreme Court of the State refused the petition of the railroads for an appeal from the decision of the State Cor-poration Commission fixing the passenger rate for interstate traffic at 2 cents per mile. In 1908 the United States Court of Appeals re-verced the findings of the Federal Circuit Court on the question of jurisdiction, saying that, in their opinion, the railroads had proceeded wrongfully in appealing to the Federal Court di-rect, also that in the event that the time limit in which the appeal might have been taken had expired, then the decision rendered by Judge Jeter C. Pritchard in the United States Circuit Court must be affirmed.

On March 16 the State Corporation Com-

mission fixed the passenger rate at 2½ cents a mile, and the original litigation was ended.

The Democratic State Convention for the nomination of State officers nominated—for Governor, William Hodges Mann, and for Lieutenant-Governor, J. Taylor Ellyson. The Republican State Convention nominated—for Governor, W. P. Kent, and for Lieutenant-Governor, A. T. Lincoln. In the election held on November 2 the Democratic State ticket was elected by a majority of about 33,000. An entire new House of Delegates was elected in which the Republicans lost two members. This gives the minority party a representation of about 13 against 87 Democrats. The liquor issue was not important in the campaign.

On March 1, Judge Pritchard in the United States Court of Appeals upheld the safety appliance act, and upheld the decision of the lower court which had given damages to an employee because of an accident which had resulted from a safety coupler being out of repair.

OTHER EVENTS. On April 30, the town of Alexandria observed the 120th anniversary of the first inauguration of George Washington as President of the United States. President Taft, Vice-President Sherman, Speaker Cannon and other distinguished persons were present. An oration was delivered by Governor Swanson, and President Taft spoke briefly. November 1, Congressman Francis R. Lassiter, of Petersburg, died suddenly. On December 30, the city of Portsmouth had a disastrous fire, some forty buildings in the business section being burned. September 1, the first asylum for the education of negro deaf, dumb and blind was opened for pupils at Hampton. The institution is supported by the State and is managed by whites. There were fifty pupils at the end of 1909. The completion of a million dollar water plant on December 25, brought clear water to the city of Richmond.

OFFICERS: Governor, William H. Mann; Lieutenant-Governor, J. T. Ellyson; Secretary of Commonwealth, B. O. James; First Auditor, Morton Marye; Treasurer, A. W. Harman, Jr.; Superintendent of Instruction, J. D. Eggleston; Attorney-General, Samuel W. Williams; Commissioner of Agriculture, George W. Koiner; Commissioner of Insurance, Joseph Button—all Democrats.

JUDICIARY. Supreme Court of Appeals: President, James Keith; Justices, S. G. Whittle, John A. Buchanan, George M. Harrison, and Richard H. Cardwell; Clerk of the Court, H. Stewart Jones—all Democrats.

The State Legislature of 1909 was composed of 34 Democrats and 6 Independents and Republicans in the Senate, and 88 Democrats, and 14 Independents and Republicans in the House. The State representatives in Congress will be found in the section *Congress* of the article *UNITED STATES*.

VIRGINIA, UNIVERSITY OF. An institution of higher learning at Charlottesville, Va., founded in 1819 by Thomas Jefferson. The attendance in 1908-9 was 785 and the instructors numbered 73. The University includes departments of liberal arts, law, graduate departments, departments of applied science and departments of medicine. Tuition is free to Virginian students in the academic schools and there are a number of scholarships. The productive funds of the University amounted in

1909 to \$1,567,411 and the total income to \$1,076,887. The president is Edwin A. Alderman.

VIRGIN ISLANDS. A group of West Indian Islands, of which Tortola, Virgin Gorda, and Anegada belong to Great Britain (Denmark owns Santa Cruz, St. Thomas and St. John) and form a presidency of the Leeward Islands (q. v.). Area 58 square miles; population (1901), 4908; 1908 (estimated), 5143. Capital, Road Town. Imports for 1907-8, £7009, and exports (sugar, cotton, fish, poultry, copper, etc.), £8027; revenue, £3971; expenditure, £4307. Commissioner and Treasurer (1908), R. S. Earl.

VITAL STATISTICS. According to the monthly bulletin of the New York State Department of Health, there were 195,701 births during the year ending October 30, 1909. In the same period the total number of deaths was 137,342. This gives a gain in native population of 58,359. The male births outnumbered the female by 6232, there being a total of 100,947. New York City's net gain in native population was 47,002, the number of births being 119,295, and deaths 72,203.

The following statistics were compiled from the Public Health Reports of the United States Marine Hospital Service. These figures, while admittedly incomplete and often misleading, particularly as regards foreign countries, are the best obtainable.

SMALLPOX. There were in all 19,691 cases of smallpox in the United States, with 90 deaths. Among foreign countries large numbers of cases were reported from the following: Brazil, 2082 cases, 1238 deaths; Egypt, 4416 cases, 1128 deaths; India, 4124 cases, 285 deaths; Italy, 1622 cases, 149 deaths; Russia, 1912 cases, 897 deaths; Tripoli, 424 cases, 171 deaths.

YELLOW FEVER. There were no cases of yellow fever reported in the United States during 1909, and only 3 cases and 1 death in Cuba. Mexico had 75 cases, 38 deaths. The South American countries which suffered most were: Brazil, 345 cases, 272 deaths; Ecuador, 159 cases, 40 deaths; Dutch Guiana 32 cases, 8 deaths. A few sporadic cases occurred in Colombia, British Guiana, Martinique, Curacao, Portugal, Trinidad, and Venezuela.

CHOLERA. In Russia and the East there were many thousands of deaths from cholera, distributed as follows: Ceylon, 16 cases, 13 deaths; China, 23 cases, 420 deaths; India, 2867 cases, 33,547 deaths; Indo-China, 28 cases, 21 deaths; Japan, 233 cases, 106 deaths; Java, 782 cases, 231 deaths; Korea, 1072 cases, 651 deaths; Manchuria, 35 cases, 30 deaths; Persia, 1003 cases, 500 deaths; Philippines, 4489 cases, 3253 deaths; Russia, 20,562 cases, 8760 deaths; Siberia, 99 cases, 67 deaths; Straits Settlements, 187 deaths; Sumatra, 220 cases, 113 deaths. In Europe Belgium had 9 cases with 6 deaths; Germany 37 cases, 8 deaths; Netherlands, 58 cases, 18 deaths.

PLAQUE. This disease was distributed pretty generally over the world. Those countries which had any considerable number of cases were: Azores, 31 cases, 12 deaths; Australia, 31 cases, 13 deaths; Brazil, 220 cases, 133 deaths; Chile, 225 cases, 45 deaths; China, 1049 cases, 5313 deaths; Ecuador, 231 cases, 278 deaths; Egypt, 622 cases, 222 deaths; India, 149,500 cases, 120,181 deaths; Indo-China, 175 cases, 170 deaths; Japan 1552 cases, 785 deaths;

deaths.

VITRALIN. See CHEMISTRY, INDUSTRIAL.

VIVISECTION. The latest available statistics show that there are forty laboratories in Germany, twenty in France, twenty in England, twenty in Italy and fifty in all other countries in which experiments on animals are made. In round numbers an average of 5 animals are killed each day in each of these 150 institutions. As to the condition under which vivisection is carried on, the methods obtaining in the English laboratories may be taken as an example. Under the carefully enforced British act of Parliament, according to the sworn statements of government inspectors, there were in 1909, 73,000 operations on animals; 96.5 per cent. of these operations were merely inoculations or hypodermic injections, while the remainder were done under anesthesia. Considering the fact that at least two thousand million animals die every year (in the United States alone there are killed annually for food purposes 50,000,000 beesves, sheep and hogs and 250,000,000 fowls) the number of animals devoted to experimentation seems exceedingly small. The continuous agitation of the anti-vivisectionists has had at least the effect of calling attention to the vast benefits derived from animal laboratory work—much of which can no longer be called experimental, as, e. g., the production of diphtheria antitoxin. According to indisputable statistics in France alone the lives of 1,350,000 children have been saved by antitoxin in 15 years. Another example is puerperal fever. Before Dr. O. W. Holmes's discovery of the cause of this disease, elaborated and made practical by Pasteur, the mortality rate among women in the maternity hospitals of Europe was sometimes as high as 40 per cent. At the present time it is 0.02 per cent. For a full review of the subject, see the *North American*, Philadelphia, February 8, 1909.

VLADIMIR. A Grand Duke of Russia, died February 10, 1909. He was born in 1847 the son of Alexander II. He held, for many years, the post of commander-in-chief in St. Petersburg, and was suspected of having given orders for the massacres of January 22, 1905, although this he steadily denied. He married, in 1874, Marie, daughter of the Grand Duke of Mecklenburg-Schwerin.

VOCATIONAL TRAINING. See EDUCATION IN THE UNITED STATES.

VOLUNTEERS OF AMERICA. A philanthropic, social and Christian movement inaugurated in March, 1896, and incorporated on November 6, 1898. It is organized in the military style, having as its model the United States army, but in conjunction with military discipline and methods of work it possesses a thoroughly democratic form of government. Its constitution and by-laws are framed by a Grand Field Council who represent the minor councils of officers throughout the country. Though only 13 years old the Volunteers have representatives and branches of their work in almost all the principal centres of the United States. They maintain some 35 principal homes and institutions, most of which

teer Women's Homes and 6396 women were received under the care of and permanently aided by the Volunteers. The Volunteer Commission workers in their visitation called upon and aided in some form or other 33,338 families during the year. These were chiefly in the poorer sections of the large cities. In the different permanent philanthropic homes and institutions maintained by the organization, 435,908 lodgings have been given, while 350,719 free meals were donated, and 148,112 meals were distributed to persons who paid for them, many doing so by work. The latest undertaking of the Volunteers is the Volunteer Hospital Work. The Hospital is located at 93 Gold Street, New York. Into it there have been 640 separate admissions to the wards, 1143 ambulance calls and 7884 patients admitted to surgical and medical wards. A total of 47,697 cases of all kinds were surgically and medically treated in the institution during the year. The Volunteer Prisoners' League has embraced some 60,000 members since its inauguration. It has leagues in nearly 20 State prisons, and over 70 per cent. of those who have left the prison through the Hope Halls sustained by the organization are living reformed and honest lives. Through the Fresh Air branch of work 32,063 mothers and children have been taken from crowded cities for a change in the open air. The President of the Volunteers is General Ballington Booth.

WAGE EARNERS' COMPENSATION AND INSURANCE. See CIVIC FEDERATION, NATIONAL and EMPLOYERS' LIABILITY.

WALDEN INVERSION. See CHEMISTRY. **WALES.** See GREAT BRITAIN.

WARD, SETH. An American Bishop of the Methodist Episcopal Church, South, died September 20, 1909. He was born in Leon county, Texas, 1858, and was educated in the public schools of that State. He was ordained a clergyman in 1881 and served as pastor in several towns in Texas. In 1902-1906 he was assistant missionary secretary of the Methodist Episcopal Church, South. He was elected bishop in 1906.

WASHINGTON. One of the Western Division of the United States. Its area is 69,127 square miles. The population in 1909, according to a Federal estimate made in that year, was 662,866.

MINERAL PRODUCTION. The coal production of the State showed a marked decrease in 1908 from the production of 1907. In the former year there were mined 3,016,567 short tons, having a spot value of \$6,673,191. This is a decrease from the production of 1907 of 663,975 tons in quantity and \$1,006,710 in value. The output was the smallest in any year, except one, since 1903. In spite of the fact that the decrease in production was due to business depression, the average price per ton showed an increase over 1907. The coal mines of the State gave employment to an average of 5415 men in 1908, a decrease from 5945 in 1907. All the important mines of the State are operated on the eight-hour day. The labor difficulties of 1908 were limited to a strike of 226 men at the Wilkeson mines in Pierce county.

This strike began in November, 1907, and had not been officially declared off at the close of 1908. The accidents in the coal mines of Washington during 1908 aggregated 104, of which 25 were fatal. Most of the fatal accidents were of a preventable character. The stone products of the State in 1908 were valued at \$1,367,191, of which granite composed the larger part. In 1907 the value of the product was \$920,254. Other mineral products of the State are coal products, lime, coke, gold, sand and gravel, copper, and silver; also unclassified, antimony, arsenic, lead, mineral waters, platinum, tungsten and zinc. The value of the mineral products of the State in the year 1908 was \$11,610,224 as compared with a value of the product in 1907 of \$11,617,706.

The production of gold in 1909 was estimated by the Director of the Mint at 18,282 fine ounces, with a value of \$377,900. The silver production was estimated at 73,500 fine ounces, valued at \$38,200.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 417,000 bushels, valued at \$359,000 from 15,000 acres; winter wheat, 20,124,000 bushels, valued at \$18,715,000 from 780,000 acres; spring wheat, 15,656,000 bushels, valued at \$14,560,000 from 760,000 acres; oats, 9,898,000 bushels, valued at \$4,751,000 from 202,000 acres; barley, 7,189,000 bushels, valued at \$4,601,000 from 182,000 acres; rye, 84,000 bushels, valued at \$79,000 from 4000 acres; potatoes, 6,970,000 bushels, valued at \$3,276,000 from 41,000 acres; hay, 798,000 tons, valued at \$11,172,000 from 380,000 acres. The agricultural development in the State has been greatly stimulated in recent years by several large irrigation projects undertaken by the United States Reclamation Service. (See IRRIGATION.) The greater part of the area thus made available is devoted to the cultivation of fruits. The number of farm animals in the State on January 1, 1910, was as follows: Horses, 330,000; mules, 5000; dairy cows, 205,000; other cattle, 358,000; sheep, 783,000; swine, 183,000. The wool clipped in 1909 was estimated at 5,273,600 pounds.

FISHERIES. The value of the products of the fisheries of the State for the year ending December 31, 1908, was \$3,513,240. Of these the most important in point of value was salmon, of which 57,508,800 pounds were taken, valued at \$1,318,660. Next in point of value were halibut, of which 30,071,500 pounds, valued at \$1,235,760 were taken. Of oysters there were taken 14,807,800 bushels, valued at \$334,560. Clams to the value of \$34,210; hard crabs to the value of \$50,850; shrimp to the value of \$21,840, and cod (to be salted) to the value of \$123,780 were among the other important fish taken. There were 2052 independent fishermen engaged in the fisheries of the State, with 2896 wage-earning fishermen employed. The number of vessels engaged in the fisheries was 153, valued at \$1,153,987.

EDUCATION. The school attendance in 1909 was 205,566. The number of male teachers employed was 1387, and female 5331. The average monthly salary of male teachers was \$78.32 and of female teachers \$60.58. The total expenditures for education during the year was \$8,894,301.

FINANCE. The balance at the end of the fiscal year 1907-8 was \$1,340,318. The income for the year 1908-9 was \$5,316,887 and the expenditures were \$5,135,724, leaving a balance at the end of the fiscal year 1908-9 of \$1,521,481. The chief sources of revenue were the sales of public lands, State tax, general, military, highway funds, interest on bonds, and redemption bonds. The chief disbursements were for the general fund, the highway fund, the permanent school fund and the current fund. The bonded debt at the end of the fiscal year 1908-9 was \$1,406,024.

POLITICS AND GOVERNMENT. The internal affairs of the State excited unusual and more than local interest. Regular, extra, and extraordinary sessions of the legislature were held. The Ballinger-Pinchot controversy was warmly discussed by the former's home papers as well as by the national press.

The political year opened on January 27 when Samuel G. Cosgrove was inaugurated Governor. A special car brought him from a California sanitarium to Olympia, and immediately upon taking the oath of office he returned to the South and there died March 28. He was succeeded by Lieutenant-Governor M. E. Hay in the capacity of Acting-Governor. This unusual turn of affairs developed an interesting application of the new direct primary law; the elections under it did not even designate Mr. Hay as second choice for Lieutenant-Governor. The first bill introduced and passed by the regular session was the much discussed Ole Hanson Race Track measure. It is as sweeping in its provisions as its prototype of New York State, and makes possession of gambling paraphernalia *prima facie* evidence of the violation of the act. Among other important measures passed were the Local Option bill, the Criminal code and the Pure Seed law. The first is applicable to incorporated towns separately and the balance of the county as a whole; its operation had closed saloons in several towns and counties. The second repealed all existing statutes and enacted one code for all crimes. A hotly contested eight-hour law for women was defeated. See ELECTORAL REFORM.

The regular session ordered the sale of capitol lands for the completion of the new State House at Olympia, and a submission to vote in 1910 of the woman's suffrage question. The extra sessions were called to investigate charges preferred against Insurance Commissioner John H. Shively; he escaped impeachment because of the constitutional provision requiring two-thirds of the Senate vote for conviction. Adjutant-General Ortis Hamilton was found guilty of embezzlement of State funds.

OFFICERS: Governor, M. E. Hay, Republican; Lieutenant-Governor, vacant; Secretary of State, I. M. Howell, Republican; Treasurer, John G. Lewis, Republican; Auditor, C. W. Clausen, Republican; Superintendent of Public Instruction, Henry Dewey, Republican; Attorney-General, W. P. Bell, Republican; Commissioner Public Lands, E. W. Ross, Republican; Commissioner Insurance, J. H. Shively, Republican.

JUDICIARY. Supreme Court: Chief Justice, Frank J. Rudkin; Associate Justices, R. O. Dunbar, H. D. Crow, M. A. Fullerton, W. Mount, M. F. Gose, S. J. Chadwick—all Republicans, except Chadwick; Clerk, C. S. Reinhardt.

The State Legislature of 1909 was composed of 39 Republicans and 3 Democrats in the Senate,

WASHINGTON, UNIVERSITY OF. An institution of higher learning at Seattle, Washington, founded in 1862. The students and faculty in 1909 numbered 1785. There were in the library 38,180 volumes. During the year 26 new members were added to the faculty, and a chair of Scandinavian Languages was added to the course of study. The University is supported by the State. The productive funds amount to about \$1,600,000 with a total income of about \$500,000. The president is Thomas F. Kane, Ph. D.

WATER PURIFICATION. At the rate of progress of 1909 all the leading cities of the United States dependent on surface-water as contrasted with deep-seated sources of supply will soon be provided with water-purification works, as has long been true in Great Britain, Germany and some other European countries. The last cities to fall into line will be those which draw water from practically unpolluted mountain sources and those which depend upon large lakes, subject to a minimum of pollution. At the close of 1909, Philadelphia, Wilmington, Washington, Cincinnati, Columbus, Indianapolis, Louisville, St. Louis, Denver, and many other important cities, besides scores of smaller places, were enjoying water that had been purified to a greater or less extent. The Columbus and New Orleans plants combine water softening with coagulation, sedimentation and filtration.

WATER DISINFECTION. Disinfection by means of bleaching powder came prominently to the front in 1909. This agent was used temporarily at Maldstone, England, in 1897, where it was introduced in the water-distributing mains of the city after a typhoid epidemic; also in the reservoirs and in the water-supply of Lincoln, England, after a typhoid epidemic in 1904-5. Electrolytic solutions of sea water or of salt and water, producing the same general effect as bleaching powder, have been used for treating water or sewage, or for general disinfection, in England, France, the United States and Cuba during the past fifteen years. But the first use of bleaching powder as a water disinfectant on a large scale was begun in 1908 and continued in 1909 at the large storage reservoir of the Jersey City Water Supply Co., located at Boonton, N. J., where the water was so treated at the rate of 40,000,000 gallons per day. This water-supply is derived from a large gathering-ground which consists of the headwaters of the Rockaway River. Although this drainage area as a whole is sparsely populated it contains some concentrated population. A contract with Jersey City called for a supply of pure and wholesome water and a court decided that the company had failed in its fulfillment at times, although in a minor degree. The failure pertained to the bacterial contents of the water, and so it was resolved to use a disinfectant to get rid of any possible disease germs. To that end, dissolving and mixing tanks were installed at small expense, and a solution of bleaching powder was admitted to the outlet pipe leading from the reservoir, therein to mix with water and serve as a germicide in its flow to the city, many miles distant. Satisfactory results were obtained at an operating

at Boonton were favorable to a low unit cost. The powder used at Boonton contained about 35 per cent. of available chlorine. When bleaching powder is dissolved in water, various chemical changes take place. The net result of these, so far as water-disinfection is concerned, is that the chlorine liberates nascent oxygen, which is the germicidal agent involved. Satisfactory bactericidal results were obtained at Boonton, when using 5 pounds of bleaching powder per 1,000,000 gallons of water, which gives 0.2 parts of available chlorine per 1,000,000 parts of water.

OZONE. Besides the plant installed at Lindsay, Ontario, in 1908, for disinfecting water by ozone, one was reported as having been built at Ann Harbor, Michigan, for the Ann Harbor Water Co., in 1909, and one is contracted for by the Baltimore County Water & Electric Co., (Md.).

WATER-WORKS. The two most notable enlargements of all old works in progress in 1909 were designed to give large additional supplies to New York and Los Angeles, from the Catskill and Sierra Nevada mountains, respectively. See *AQUEDUCTS*.

The progress and results of establishing a universal metre system at Cleveland, Ohio, were summarized in the report of the water department of that city for 1908, published in 1909. In 1901, with about 6 per cent. of the consumers' taps metered, the water consumption was 160 gallons per capita. In 1902, with about 20 per cent. metered, by the close of the year only a slight reduction over 1901 was noted; but in 1903, with 43 per cent. of the taps metered, the consumption fell to 142 gallons, while in 1908, with 94 per cent. metered, the per capita consumption was only 100 gallons. This fall in the unit rate of consumption was so great that much less water was used in 1908 than in 1901, notwithstanding a heavy increase in population.

FRANCE, BELGIUM AND SWITZERLAND. Late in 1909 there appeared a revision of *Annuaire Statistique et Descriptif du Distribution d'Eau de France*, etc. This book, which first appeared in 1903, is a water-works manual for cities of 5000 inhabitants and upwards in French-speaking countries, including the colonies of France. The latest issue shows that on January 1, 1909, there were in France 643 cities of 5000 population or more. Of these 504 had a general public water-supply, but of the latter number 25 cities had no house-to-house supply, the distribution stopping with public fountains. In Belgium only 95 of the 261 cities of 5000 and upwards had public water-supply. In Switzerland all municipalities of 5000 and more, 43 in number, had water-works. Only one of the Belgian and none of the Swiss cities relied on fountains alone for water distribution. About half of the water-works of France take their supply from springs and about a fourth from wells and underground galleries, thus making some three-fourths that use underground rather than surface sources. Of 145 river supplies in France 73 are filtered; 2 are treated with ozone; 36 have a double supply and only 34 reported as using "raw" river water. The per capita

water consumption in 1908 averaged 50 gallons in France and 24 in Belgium (Switzerland not given). Probably the average in the United States, were figures available, would have been at least 100 gallons. Ownership of the works was divided as follows: France, 317 public to 162 private works with fountains only evidently omitted; Belgium, 69 to 26; Switzerland, 39 to 4. By percentages the figures for public or municipal ownership were: France, 65 per cent.; Belgium, 73 per cent.; Switzerland, 90 per cent. See also WATER PURIFICATION.

WATERWAYS, INTERNAL. The subject of development and improvement of the great internal waterway systems of the United States continued to receive a great deal of attention in 1909 as it did in 1908. Two important reports dealing with the subject were completed and made public during the year. The first was the preliminary report of the United States National Waterways Commission, composed of twelve members of Senate and House of Representatives, with Senator Burton as chairman, created by Act of Congress of March 3, 1909. This commission succeeded the Internal Waterways Commission, which was appointed in 1907 by an executive act of President Roosevelt. Congress in 1909 refused to continue this Commission, which was composed of Senators, members of the House of Representatives, engineers and others, and substituted for it the National Waterways Commission, composed entirely of Senators, and members of the House of Representatives. The Commission held numerous meetings during the year, both in the United States and Europe. Seven of the twelve members made a tour for the examination of European waterways from August to October, 1909. In addition, a majority of the members of the Commission examined the Mississippi River from St. Paul to New Orleans in November, and some of them in the same month inspected the Missouri River from Kansas City to its mouth and the Illinois River from its lower portion to the head of navigation.

The Commission separately considered in its conclusions the following distinct topics: First, the reasons for decline in inland waterway transportation, together with suggested remedies therefore and the relation between waterway and railway transportation; second, canals, including especially the advisability and practical value of canals for deep vessels; third, the necessary steps to be taken before the adoption of projects for the improvement of rivers and harbors and the method of making appropriations therefor; fourth, the proper division between appropriations by the Federal government on the one hand, and the States, minor political divisions, and individuals, on the other; fifth, the relation of waterway improvements to bank protection, flood, and drought prevention, irrigation and drainage; sixth, the most desirable policy relating to harbors, including the ownership and control of wharves and docks; seventh, the relation of waterway improvements to water power; eighth, methods for the improvement of rivers including the construction of locks and dams; ninth, comparison of European waterways with those of the United States, including the investigation of European and American transportation routes both by land and water. This report was designed as a preliminary to the general

report which the Commission is to make at the conclusion of its investigations.

The special Board of Engineers, constituted by a section of the River and Harbor act, approved March 2, 1907, made its report on March 20, 1909. The membership of the Board includes Colonel W. H. Bixby, Corps of Engineers, President of the Mississippi River Commission; Lieutenant-Colonel C. McD. Townsend, Corps of Engineers; Lieutenant-Colonel J. G. Warren, Corps of Engineers; Mr. Henry B. Richardson, member of the Mississippi River Commission, and Mr. Homer P. Ritter, Assistant, United States Coast and Geodetic Survey. In this report the chief consideration was given to various methods of securing the 14-foot channel at the mouth of the Mississippi River, and all the methods proposed for securing this result were considered as practical from an engineering standpoint, except the method of improvement by means of storage reservoirs. The Chief of Engineers of the United States army approved the opinions expressed with regard to the methods of improvement considered, with the exception that he believed that it would not be practicable to obtain a minimum depth of 14 feet between St. Louis and Cairo by means of locks and movable dams. He is not prepared to recommend that it is practicable from an engineering standpoint to obtain a 14-foot depth at low water in the section from St. Louis to the mouth of the Ohio River by any method of open-river improvement. The special Board concludes that the most practicable means of obtaining and maintaining a navigable channel of 14 feet depth from St. Louis to the mouth of the Mississippi River is by the combined method of draining and regularization works in the open river. The estimated cost of this plan of improvement is \$128,600,000, with \$6,500,000 annually for maintenance after completion of the work. The Board of Engineers reports that it is not desirable to construct a navigable channel 14 feet in depth from St. Louis to the mouth of the Mississippi River or from Chicago to the mouth of the Mississippi River. It declares that the present demands of commerce between St. Louis and the mouth of the Mississippi River are adequately met by the existing projects having for their objects, to obtain and maintain an 8-foot channel from St. Louis to the mouth of the Ohio and a channel of not less than 9 feet in depth below the mouth of the Ohio. The Board believes that an 8-foot channel from Chicago to St. Louis, corresponding to the present 8-foot project from St. Louis to Cairo is the least that will adequately meet the demands of commerce, and believes such a waterway would be desirable provided its cost would be reasonable. It is stated that the present and prospective demands of commerce between Chicago and the Gulf will be adequately served by a through channel 9 feet in depth, which may be obtained without violent changes of existing methods of improvement.

The fourth annual convention of the Deep Waterway Association was held at New Orleans, covering a session of three days, beginning October 30, 1909. The opening of the convention was timed to take place upon the arrival of the Presidential party from St. Louis, comprising 22 boats and bearing, in addition to President Taft and his party, United States Senators, members of Congress, governors, for-

fact that such a project had been reported against by the Commission of Engineers as is noted above. Resolutions were adopted making the adoption of the policy of proceeding both promptly and on broad lines in the development of interior waterways.

In the election of November 2, the people of Illinois voted for an expenditure of \$20,000,000 of State money in the building of a water power waterway project from Joliet on the Des Plaines River to Utica on the Illinois River and a special session was called by Governor Deneen for the purpose of enacting the necessary laws for the expenditure of this money. See ILLINOIS.

The National Rivers and Harbors Congress met in its annual session at Washington on December 8. President Taft opened the session with an address in which he outlined definitely the extent to which he thinks it is desirable and to which he believes congress will go in carrying out the comprehensive plans for the general improvement of the waterways of the country. He declared his belief that bonds should be issued for such a purpose and that they should not be primarily issued for these improvements, but only to carry on work which has been undertaken by direct appropriations and which could not be finished on account of reduced revenue. The President declared his belief that the work of general waterway improvements should be confined for the present to the recommendations of the army engineers on the Mississippi, Missouri and the Ohio rivers between St. Paul, St. Louis, Pittsburgh, Cairo, New Orleans and other cities, which, in his opinion, would benefit a larger section of the country than any other project suggested. He said, referring to the advocates of a 14-foot channel in the Mississippi, that the recommendations of the engineers for a 9-foot channel should be followed up and when this was obtained, a 14-foot channel might be secured. Congress adjourned on December 10, after adopting resolutions reciting that the United States is alone of the great nations of the world backward in developing its waterways and declaring that the present Congress can do much by appropriate legislation. The resolutions urged the passage by Congress of a Rivers and Harbors Bill, appropriating at least \$50,000,000 for the purpose of carrying forward under a continuing contract system such rivers and harbors projects as have been heretofore entered upon or finally approved and as are of such a character as to surely fit into and carry into effect any larger comprehensive and connected waterway system that may be subsequently adopted. The annual appropriation for ten years of an equal sum was recommended. The resolutions also advocated the creation of a department of public works with a cabinet officer at its head, each department to have charge of and control over all public works of this and a similar character. For mention of the tour of President Taft down the Mississippi River and his address relating to the proper development of waterways, see UNITED STATES, section Administration.

WEI-HAI-WEI. A territory on the north coast of Shantung Province, China, leased to

285 square miles; population, including the 4000 inhabitants of Liu Kung, about 150,000. Beyond the limits of the British territory is an area of about 1500 square miles, in which Great Britain has certain special rights as the exercise of measures for the defense of the territory, the acquisition of sites for water supply, etc. The native town of Weihaiwei has about 2000 inhabitants. Commerce is small. The territory was acquired for its strategic value, which has been comparatively little since Russia lost Port Arthur. At present its chief use to Great Britain is as a rendezvous and health resort for the China squadron. Revenue and expenditure in dollars (silver) in the year 1907-8 amounted to 80,331 and 173,340 respectively; both in that year and in 1908-9 the grant-in-aid was £10,000.

WEIL, HENRI. A German-French classical scholar, died in November, 1909. He was born at Frankfort-on-the-Main in 1818, and studied at Bonn, Berlin, and Leipzig. In 1847 he was made an associate professor at Paris, whence two years later he was called to Besançon. In 1876 he went to Paris as a professor of Greek at the Ecole Normale Supérieure and the Ecole des Hautes Etudes, resigning both positions in 1891. Among his works are *De l'ordre des mots dans les langues anciennes, comparées aux langues modernes* (1844; 3d ed., 1879), his masterpiece; and editions of *Æschylus*, with a Latin commentary (2 vols., 1861-67; 2d ed. 1884); seven tragedies of *Euripides*, with a French commentary (1868; 2d ed. 1879); *Les harangues de Démosthène* (1873; 2d ed. 1881); *Les plaidoyers politiques de Démosthène* (1877-86); *Etudes sur le drame antique* (1897); and *Etudes de littérature et de rythmique grecques* (1902).

WELLESLEY COLLEGE. An institution for the higher education of women at Wellesley, Mass., founded in 1875. The attendance in 1909-10 was 1319. The library contained 65,238 volumes. The faculty numbered 106 officers of instruction, and there were 31 graduate students in residence. A new gymnasium called the Mary Hemenway Hall, in charge of Amy Morris Homans, A. M., and a new dormitory, Shafer Hall, were opened in the autumn of 1909. The college offers to graduates a fellowship of \$1000 per annum and 30 scholarships of \$175 each, and to undergraduates about 50 other scholarships. A new library to cost \$125,000, given by Andrew Carnegie, approached completion. The president is Miss Caroline Hazard.

WERNER, REINHOLD VON. A German vice-admiral and writer, died in March, 1909. He was born near Magdeburg in Prussia in 1825, and after experience in the merchant marine, in the course of which he made numerous voyages to the East Indies, he became, in 1849, an officer in the newly organized fleet of the German nation. In 1852 he entered the Prussian service, and became lieutenant-captain in 1856, took part in the Far East expedition of 1859-62 and fought with distinction at Jasmund, in 1864, during the war with Denmark. He took part also in the Seven Weeks' War, and in 1873 was detailed at the head of a squadron of five ships off the coast of Spain where the revol-

tionary movement was then in progress. He became rear-admiral in 1875 and was retired in 1878. In 1898 he was nominated to be vice-admiral, and in 1901 he was ennobled. Of his voluminous writings, the best known are: *Die preussische Expedition nach China, Japan und Siam* (1863); *Die Schule des Seewesens* (1866); *Das Buch von der deutschen Flotte* (1868); *Seebilder* (1876); *Erinnerungen und Bilder aus dem Seeleben* (1881); *Berühmte Seeleute* (1882-84); *Drei Monate an der Sklavenküste* (1885); *Dirk Mallinga* (1888); *Bilder aus der deutschen Seekriegsgeschichte von Germanicus bis Kaiser Wilhelm II.* (1898). In 1864 he founded at Hamburg the *Hansa*, a periodical devoted to seamanship and the life-saving service.

WESLEYAN METHODIST CONNECTION IN THE UNITED STATES. An evangelical denomination of Methodist principles, founded in 1843 by members of the Methodist Episcopal Church who strongly opposed slavery. The denomination had in 1909 19,485 communicants, 605 churches, and 570 ministers. In the 487 Sunday schools were enrolled 18,783 scholars and 1913 teachers. Among the educational institutions which are under the control of the denomination are Houghton Seminary, at Houghton, N. Y., and Miltonvale College at Miltonvale, Kansas. The Indiana Conference also has a school under its own control, but this will ultimately come under denominational control and the same may be said of the preparatory school located at Central, S. C. The official paper is the *Wesleyan Methodist*, published at Syracuse. The highest authority of the church is the quadrennial General Conference.

WESLEYAN UNIVERSITY. An institution of higher learning at Middletown, Conn., founded in 1831. The attendance in 1909 was 342 students with 42 members of the faculty. There were in the library 82,000 volumes. During the year there were received in gifts \$30,000. In 1900 co-education was abolished by the trustees. Professor William Arnold Shanklin, Ph. D., LL. D. was installed as president of the University. The total productive funds amount to about \$1,520,000 and the income to about \$135,000.

WEST AFRICA. See BRITISH WEST AFRICA, FRENCH WEST AFRICA and ENTOMOLOGY.

WESTERN AUSTRALIA. A state of the Australian Commonwealth. Area, 975,920 square miles. Estimated population (June 30, 1909), 275,267. Capital, Perth, with a population, including suburbs, of about 54,000. The executive power is exercised by a governor, appointed by the Crown and assisted by a responsible ministry. The Parliament consists of the Legislative Council (30 members, elected for six years) and the Legislative Assembly (50 members, elected for three years). Both men and women vote. The Governor in 1909 was Sir Gerald Strickland, the Premier and Treasurer, Newton James Moore. (For statistics and other details, see AUSTRALIA.) Mr. Moore, the Premier, in a speech on July 20, declared that rigid economy in the administration would be necessary to effect the decrease from the customs. Four hundred miles more of railway were to be built, including the line from Port Headland to Marble Bay. As a result of advances to the Agricultural Bank, 240,000 acres had been

cleared for cultivation in 1909. The population was steadily increasing.

WESTERN RESERVE UNIVERSITY.

An institution of higher learning at Cleveland, Ohio, founded in 1826. The attendance in 1909 numbered 1011 students, with 214 instructors and officers. An additional fund of \$500,000 was completed during the year. During 1909 the H. K. Cushing Laboratory of experimental medicine was opened; the Morley Laboratory of chemistry and geology was brought to completion, and the Amasa Stone memorial chapel was in course of construction. The requirements for admission to the medical school, already including three years of college work, were raised to include the requirement of a degree for unconditioned entrance. The productive funds of the University amount to about \$2,300,000 and the income to about \$535,000. The president is Charles F. Thwing, D. D.

WEST VIRGINIA. One of the South Atlantic Division of the United States. Its area is 24,170 square miles. The population in 1909, according to a Federal estimate made in that year, was 1,135,206.

MINERAL PRODUCTION. Owing to conditions more favorable for the cheap production of coal in West Virginia, the percentage of decrease in that State during 1908 was less than in Ohio, Pennsylvania, Maryland and Alabama. The total production in 1908 was 41,897,843 short tons with a spot value of \$40,009,054. This was a decrease over the production of 1907 of 6,193,740 short tons in quantity and \$7,837,576 in value. Another reason for a smaller decrease than in other States was the fact that there was no suspension of operations pending the adjustment of the wage scale as there was in the adjoining States. The decreases of 1908 were particularly noticeable in the important coke-making counties of Fayette and McDowell. The coal mines of the State in 1908 gave employment to 56,861 men. The majority of the mines of the State are carried on under "open-shop" or non-union rules, and the 10-hour day prevails in the majority of cases. In 1908 there were 313 fatalities in the coal mines of the State as compared with 729 in 1907. The largest single disaster was a dust explosion in the Lick Branch Mine of the Pocahontas Consolidated Collieries Company in which 50 men were said to have lost their lives. Another important development toward the increased production of coal in the State is the completion of the Virginian Railway from Deepwater on Kanawha River to Sewells Point near Norfolk. This important outlet for West Virginia coal and the only railway built from the coal fields to the seaboard was completed in the spring of 1909. Another important railroad constructed was the Coal River Railroad from St. Albans into the rich coal fields of the Coal River valley. This road has been purchased by the Chesapeake and Ohio Railway and will be an important feeder to that line. West Virginia ranks second among the States in the quantity of coke produced, although it is led by Alabama in the value of its product. The production of 1907 amounted to 2,637,123 short tons, valued at \$5,267,054 against 4,112,896 short tons, valued at \$9,717,130 in 1907. The decrease in 1908 over 1907 amounted to 35.88 per cent. in quantity and 45.8 per cent. in value. The average price per ton de-

clined from \$2.36 to \$2. The State has important manufactures of clay products. These in 1908 were produced to the value of \$3,261,756 as compared with a value of \$3,640,387 in 1907. Other important mineral products are building stone, coal products, lime, glass-sand, sand and gravel, salt, and mineral waters, also abrasive materials, bromine, Portland cement, iron ores and zinc. The total value of the mineral products of the State in 1908 was \$77,465,737 as compared with a value of the product in 1907 of \$92,487,960.

The State did not share in the general decline in the production of petroleum in 1909 on account of the active developments in Roane, Harrison and Lincoln counties, especially at Shinnston pool, where a gusher estimated at 4000 barrels a day was brought in on December 8, which did much to stimulate well drilling in that region.

The production of coal in 1909 was nearly equal to that of 1907 and surpassed that of 1908. An epoch-making incident in the development of the industry was the completion in 1909 of the Virginian Railway, the first transportation line in the United States constructed from the coal fields to the seaboard. The main purpose of this new line is to furnish an additional outlet for the coals of the Kanawha, the New River and the Pocahontas region. During the months of 1909 when it was in operation it carried nearly 1,500,000 tons of coal and it is expected that within two years it will furnish transportation for nearly 5,000,000 tons a year. The production suffered somewhat during the year from a shortage of labor attributed to the exodus of miners to Europe which took place during the business depression of 1908.

AGRICULTURE and STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 27,632,000 bushels, valued at \$20,448,000 from 880,000 acres; winter wheat, 4,810,000 bushels, valued at \$5,435,000 from 370,000 acres; oats, 2,156,000 bushels, valued at \$1,164,000 from 98,000 acres; rye, 148,000 bushels, valued at \$133,000 from 11,000 acres; buckwheat, 499,000 bushels, valued at \$379,000 from 22,000 acres; potatoes, 3,822,000 bushels, valued at \$2,599,000 from 39,000 acres; hay, 844,000 tons, valued at \$11,225,000 from 675,000 acres; tobacco, 12,800,000 pounds, valued at \$1,663,200 from 14,400 acres. The farm animals on January 1, 1910, numbered as follows: Horses, 197,000; mules, 12,000; dairy cows, 247,000; other cattle, 511,000; sheep, 709,000; swine, 338,000. The wool clipped in the State in 1909 was estimated at 2,538,000 pounds.

EDUCATION. The school attendance in 1909 was 188,661. There were 4054 male teachers and 4608 female. The average salary of the teachers was \$40.19. The year 1909 was notable in the educational history of the State on account of the increased interest aroused in education by means of campaigns conducted in many counties. Rural high schools and better and more attractive school buildings have been the special objects towards which these campaigns have been directed. About 40,000 volumes have been added during the year to the small libraries in rural schools. Two new divisions were created in the State Department of schools, the Division of High

Schools and the Division of Examinations and Institutes. The expenditures for all departments of education for the year amounted to \$4,360,048.

FINANCE. The balance at the end of the fiscal year 1907-8 was \$1,688,167. The income for the fiscal year 1908-9 was \$5,026,193 and the expenditures were \$4,473,432, leaving a balance at the close of the fiscal year 1908-9 of \$2,240,918. The chief sources of revenue were direct tax, \$5 on a thousand, and the license tax. The chief disbursements were for the State officials and clerks, the militia and 21 State institutions, including hospitals, normal schools, asylums, the State university, etc. The above receipts and disbursements included an item of \$1,810,000, which was for the tax on public service corporations paid into the treasury and then refunded to counties, districts and municipalities.

POLITICS AND GOVERNMENT. The legislature convened its regular session on January 14. Governor Dawson in his message devoted considerable space to the matter of revenue for the State. The constitution prohibits the creating of debt and the Governor pointed out that the business of the State demanded more money than the present revenues afford. He recommended that coal, oil and gas produced in the State be taxed and that the inheritance tax laws be amended so as to produce revenues from this source. He suggested that the tax be regulated by the gross earnings from production. He discussed the conservation of natural resources, public health, pollution of rivers, and education. He indorsed the increased efficiency of the mine inspection department and the prohibition of the taking into any mine of intoxicating liquors. He recommended the passing of a local option law and the submission of an amendment prohibiting traffic in intoxicating liquors. For the first time in fifty years the city of Charleston became wholly "dry" on July 1, 1909. By the refusal of the City Council to grant the renewal of liquor licenses, 142 saloons were closed.

OTHER EVENTS. On January 12 an explosion and fire in the Lick Branch Colliery of the Pocahontas Consolidated Coal Company at Huntington caused the death of 105 men. The explosion is believed to have been caused by the use of open lamps by new miners who were employed to take the place of the 51 men who were killed in an explosion in the same opening on December 28, 1908. The legislature ordered a rigid investigation. The mine was inspected by the State Inspectors after the first accident and was pronounced in perfect condition before the owners were permitted to resume work.

OFFICERS: Governor, Wm. E. Glasscock; Secretary of State, Stuart F. Reed; Treasurer, E. L. Long; Auditor, John S. Darst; Attorney-General, Wm. G. Conley; Superintendent of Schools, M. P. Shawkey; Com. of Agriculture, J. Millan—all Republicans.

JUDICIARY. Supreme Court of Appeals: President, Henry Brannon, Rep.; Associate Justices, George Poffenbarger, Rep.; L. Judson Williams, Rep.; Ira E. Robinson, Rep.; Clerk, W. B. Mathews, Rep.

The State Legislature of 1909 was composed of 24 Republicans and 6 Democrats in the Senate, and 60 Republicans and 26 Democrats in the House. The State representatives in

Congress will be found in the section *Congress* of the article *UNITED STATES*.

WHARTON, JOSEPH. An American iron-master and philanthropist, died January 11, 1909. He was born in Philadelphia in 1823. He was educated by private tutors. He was engaged in various mercantile enterprises until 1853, when he became manager of the Lehigh Zinc Co. For this company he built, in 1860, the first successful smelter works in the United States. He purchased, in 1873, the Gap Nickel Mines in Lancaster county, Pa., and established at Camden, N. J., the first successful cobalt and nickel works in America. Mr. Wharton was the largest individual pig iron manufacturer in the United States. He was president and director of the Andover Iron Co., and a director of the Bethlehem Steel Works and other large corporations. He founded the Wharton School of Finance and Commerce in the University of Pennsylvania, endowed chairs in Swarthmore College, and was identified with other institutions of learning. He wrote many treatises on the policy of protection, and other economic subjects.

WHEAT. The wheat season of 1908-09 was characterized by unfavorable weather conditions in the fall and early spring which resulted in an unsatisfactory growth of the young crop. From all parts of the winter wheat belt the crop was reported as short, thin, poorly rooted and as not stooling timely. The prospects for a good yield were not encouraging at any time during the early part of the season. In the spring 7.2 per cent. of the winter wheat area was plowed up for oats and other spring crops. Favorable weather, however, during the latter part of the growing season brought out the remarkable recuperative powers of the wheat plant, the prospects for a good crop brightened rapidly, and a much better yield than had at first been expected was finally secured. In fact the effect of the good weather largely discounted the reduced acreage as compared with the year before. In many parts of Europe a dry fall, followed by a severe winter and a late and cold spring, interfered greatly with the growth of winter wheat and other crops sown in the fall. In Germany about 10 per cent. of the area sown to winter wheat was abandoned the following spring. The total winter wheat production of Europe, however, owing to more favorable weather during the latter part of the growing season, was higher than had at first been anticipated, but in many localities it was not quite up to normal.

The year's crop in the United States, according to statistics published by the Department of Agriculture, was 446,366,000 bushels of winter wheat on 28,330,000 acres and 290,823,000 bushels of spring wheat on 18,393,000 acres. The total area was 46,723,000 acres and the total production 737,189,000 bushels. The average yield per acre was 15.8 bushels for each type of wheat. The production of 1909 was second only to the record crop of 1901 and slightly above the heavy crop of 1906. However, owing to the good price of wheat at this time the total value of the year's crop is estimated at about \$725,000,000 on the farm, which exceeds all previous values by a considerable sum. As compared with the 5-year average it is greater by more than 34 per cent. In comparison with the previous year the winter wheat area in 1909 was about 2,000,000 acres

smaller and the production almost 9,000,000 bushels larger, while the area in spring wheat in 1909 was a little over 1,000,000 acres and the production over 64,000,000 bushels larger than in 1908.

The following table shows the acreage, production and farm value of the wheat crop in some of the leading wheat-growing States for 1909:

States	Acreage	Winter Wheat Production	Value
Minnesota.....	
North Dakota.....	5,895,000	85,478,000	\$82,059,000
Kansas.....	2,350,000	45,590,000	40,575,000
Nebraska.....	
South Dakota.....	
Washington.....	780,000	20,124,000	18,715,000
Indiana.....	2,165,000	33,124,000	36,436,000
Illinois.....	1,810,000	31,494,000	32,754,000
Missouri.....	1,943,000	28,562,000	29,990,000
Pennsylvania.....	1,545,000	26,265,000	28,629,000
Ohio.....	1,480,000	23,532,000	26,056,000
Oregon.....	535,000	11,235,000	10,449,000
States	Acreage	Spring Wheat Production	Value
Minnesota.....	5,600,000	94,080,000	\$90,817,000
North Dakota.....	6,625,000	90,762,000	83,501,000
Kansas.....	150,000	1,725,000	1,656,000
Nebraska.....	290,000	4,060,000	3,613,000
South Dakota.....	3,375,000	47,588,000	42,829,000
Washington.....	760,000	15,656,000	14,560,000
Indiana.....	
Illinois.....	
Missouri.....	
Pennsylvania.....	
Ohio.....	275,000	5,142,000	4,782,000

It will be noticed that Minnesota and North Dakota lead in the total production of spring wheat, and Kansas and Nebraska in the total yield of winter wheat. In 1908 Indiana held second place in winter wheat production and Nebraska third.

Broomhall, the English authority, places the world's wheat production for 1909 at 3,846,968,000 bushels, an increase of more than 9 per cent. over 1908 and of 34 per cent. over 1906, the previous record year. This high total is due to the good yields secured in every important wheat-growing country of the world. All these countries except Austria-Hungary, Germany, and Spain, showed an increased yield. This same authority points out that Russia's production shows an increase of about 69,000,000 bushels over last year, and that Canada has produced 24,000,000 bushels, and Alberta, 5,000,000 bushels record. England's harvest of 64,000,000 bushels is the best since 1899. The total Canadian yield, as estimated by Canadian officials, is 168,386,000 bushels, and the rate of yield 21.13 bushels per acre. The growing importance of the western Canadian wheat region is indicated by the fact that this year Manitoba produced 45,000,000 bushels, Saskatchewan, 70,000,000 bushels, and Alberta, 5,000,000 bushels of wheat. The French crop amounted to approximately 360,200,000 bushels which was grown on 18,236,000 acres.

WHISKEY. See *FOOD AND NUTRITION*, and *LIQUORS, FERMENTED AND DISTILLED*.

WHITEAVES, JOSEPH FREDERICK. An English paleontologist, died August 8, 1909. He was born at Oxford, England, in 1835. In early life he began the study of Jurassic fossils of England. In 1861 he removed to Canada and in 1865 became Curator of the Museum of

and zoölogy of Canada.

WICKERSHAM, GEORGE W. An American Cabinet officer and Attorney-General in President Taft's Cabinet. He was born in Philadelphia. After studying two years at Lehigh University for the profession of civil engineer he changed his mind and resolved to train himself for a business career. He again changed his purpose and entered the law department of the University of Pennsylvania, from which he graduated in 1880. He began to practice in Philadelphia, but in 1882 removed to New York and became connected with the firm of Strong and Cadwalader. For twenty years he was a partner in this firm and became one of the most eminent lawyers in New York City. Mr. Wickershaw was active in philanthropic affairs in New York City and was for years vice-president of the Association for Improving the Condition of the Poor.

WIGGINS, BENJAMIN LAWTON. An American educator, died June 14, 1909. He was born at Sand Ridge, S. C., in 1861, and graduated from the University of the South in 1882. After two years' post-graduate work at Johns Hopkins University he returned to the University of the South as associate professor of Greek, becoming later full professor. In 1893 he was elected vice-chancellor of the institution.

WILDENBRUCH, ERNEST VON. A German dramatic poet and novelist, died January 15, 1909. He was born at Beirut, Syria, in 1845. For 23 years he was employed in the German Foreign Office, and at the same time, wrote copiously. In 1897 he became privy councillor of legation. The most successful of his earlier dramas were *Väter und Sohne* (1882); *Der Mennonite* (1882) and *Harold* (1882). A series of historical plays began with *Die Karolinger* (1882). *Die Quitzous* (1888) was a Hohenzollern play which was remarkably successful, and brought Wildenbruch into close personal relationship with the Kaiser. Following this came *Der Neue Herr* (1891); *Heinrich und Heinrichs Geschlecht* (1895); *Willehahn* (1897); *Die Tochter der Eraamus* (1900); *Koenig Laurin* (1902). Wildenbruch's novels and short stories show great originality. Among them are *Der Meister von Tanagra* (1880); *Der Astronom* (1887); *Tiepe Wasser* (1898), and *Semiramis* (1904). Among his *Lieder und Gesänge* (1877) and *Dichtungen und Balladen* (1884) are many which became widely popular.

WILLAMETTE RIVER BRIDGE. See BRIDGES.

WILLIAMS COLLEGE. An institution of higher learning at Williamstown, Mass., founded in 1793. The attendance in 1909 was 528, with 55 members of the faculty. About 50 per cent. of the students are from New York. There were in the library 66,200 volumes. Among the changes in the faculty were the retirement of Professor L. W. Spring of the English Department, and Professor J. H. Hewitt in the Greek Department. Gifts and endowments were received during the year to the amount of \$158,834. The endowment of the college is about \$1,600,000 and the annual income about \$175,000. The president is Henry A. Garfield.

many years preceding he was chairman of that company, which controls the Wilson steamship lines. Outside of his business interests Mr. Wilson was chiefly famous as having been the host of King Edward, then Prince of Wales, at the time of the famous "Tranby-Croft scandal" in 1890.

WILSON, AUGUSTA JANE (EVANS). An American author, died May 9, 1909. She was born in Columbus, Ga., in 1835. Her first novel, *Inez*, was published in 1856, and this was followed by *Beulah* (1859); *Macaria* (1864); *St. Elmo* (1866); *Vashti*, (1869); *Infelice* (1875); *At the Mercy of Tiberius* (1887); *A Speckled Bird* (1902); and *Devota* (1907). These novels, turgid and melodramatic, and with little literary merit, were written with considerable dramatic skill, and, especially the earlier ones, achieved, for the days in which they were published, a remarkably large circulation. *St. Elmo* and *Vashti*, indeed, attained almost the dimensions of a national epidemic. Miss Evans married, in 1868, Dr. M. L. Wilson, of Mobile, Ala.

WILSON, JAMES. An American public official, Secretary of Agriculture in President Taft's Cabinet. He was born in Ayrshire, Scotland, in 1835, and in 1852 came, with his parents, to the United States, settling in Connecticut. In 1855 he went to Tama county, Iowa. He received his education in the public schools of Iowa and at Iowa College. In 1861 he engaged in farming. He was a member of the 12th, 13th and 14th Assemblies of Iowa, and from 1877-83 was a member of the Iowa State Railway Commission. He was elected to Congress from 1873 to 1877 and from 1883 to 1885. From 1890 to 1897 he was professor of agriculture in the Iowa Agricultural College. He was appointed by President McKinley Secretary of Agriculture in 1897, and held that office during President Roosevelt's administrations. He, with the exception of Secretary Meyer, was the only Cabinet officer of President Roosevelt's administration retained by President Taft. Secretary Wilson has served a longer period of time in the Cabinet than any other Cabinet official in the history of the government.

WINDWARD ISLANDS. The southern group of the West India islands, belonging to Great Britain and including Barbados (a separate colony), St. Lucia, St. Vincent, Grenada (qq. v.), the Grenadines, and Tobago (see TRINIDAD). The Government of the Winward Islands is composed of the three colonies of Grenada (the seat of government), St. Vincent, and St. Lucia, with their dependencies, the grenadines being divided between Grenada and St. Vincent. Each colony maintains its separate institution; there is no general legislative council, and no common tariff or treasury. Each is under an administration subordinate to the Governor (1909, Sir James Hayes Sadler). The St. Vincent Legislative Council in July voted an annual contribution of about one per cent. of the colony's revenue to the Imperial Treasury for the support of the navy, as an expression of gratitude for Imperial protection and of loyalty to the King.

WINE. See LIQUORS, FERMENTED AND DISTILLED.

WIRELESS TELEGRAPHY AND TELEPHONY. The practical efficacy of wireless communication was forcibly shown early in 1909, when the general call of distress from the severely injured steamer *Republic* was detected by the *Baltic*, then seventy miles away, and a disastrous loss of life prevented by the prompt assistance rendered. This event proved a great stimulus to the use of wireless equipment on shipboard. Exclusive of naval equipment there are now nearly 1000 shore stations and equipped vessels operating in American waters.

Advances in telegraph sending apparatus employing arcs and high frequency alternators to produce sustained oscillations in the antennæ have considerably increased the radiating power. In group frequency sending outfits great improvement has resulted from the excitation of the antennæ from special 500-cycle alternators through step-up-high-voltage transformers in place of the usual 60-cycle circuit connections. The signals produced in the receiving telephone by this system have a pitch of 500 cycles per second, to which the ear is highly sensitive. By this arrangement the range of effective transmission is considerably increased.

As a receiving device the string galvanometer, whose vibrations are photographically recorded on a moving strip of sensitized paper, has proved very effective in increasing the speed of operation.

Great success has attended the experiments of Messrs. Bellini and Tosi, who have devised a directive system employing two aerials set at right angles in connection with a radio-goniometre in the station. In both sending and receiving they have been able to cut off all radiation except that in a very small angle. Much work has been done to reduce certain elements of wireless communication to an accurate scientific basis. Precise methods of wave-length and frequency measurement have been introduced and have proven very effective in reducing interference. Practical methods of calculating the frequencies of antennæ with primary and secondary paths have been worked out.

The French government has begun the installation of a military station in connection with the Eiffel tower. The equipment is to have a capacity of 100 horse-power and the antennæ will reach to the great height of 985 feet. It is expected that very long transmission distances may be secured with this station. In addition the French government is engaged in the establishment of a complete system of wireless stations covering the entire country, which will be operated in connection with its postal service.

Wireless telephony has not emerged from the state of preliminary experimentation. Experiments have been conducted by the French navy with apparatus containing a number of enclosed arcs connected in series and burning a special form of electrode. Official tests on the Mediterranean were successful at a distance of 104 miles between stations. Majorana, an Italian experimenter, has made a very effective combination of a new type of transmitter known as the hydraulic microphone with a bolometer or an audion as a receiver. With this equipment successful transmission was secured from Rome to Sicily, a distance of 250 miles. See UNITED STATES, section Navy.

WISCONSIN. One of the North Central Division of the United States. Its area is 56,066 square miles. The population in 1909, according to a Federal estimate made in that year was, 2,356,874.

MINERAL PRODUCTION. The State is not notable for its mineral productions, and the most valuable single product is stone. The products of stone in 1908 were valued at \$2,850,920, as compared with \$2,492,141 in 1907. The State is a large producer of mineral water, and in 1908 there were produced 6,084,571 gallons, valued at \$1,413,107, as compared with a product in 1907 of 6,839,219 gallons, with a value of \$1,526,703. The clay products are also of importance. These in 1908 were valued at \$958,395, as compared with the value of the product of 1907 of \$1,127,819. Large quantities of zinc are produced in the State and this product in 1908 was valued at \$1,648,572, as compared with a value for the product of 1907 of \$1,802,214. The State produced in 1908 733,993 tons of iron ore, as compared with 838,744 tons in 1907. A small quantity of coke is produced and the production of lime is considerable. Other important mineral products are lead, sand and gravel, cement, graphite, metallic paint, pig iron, and crystalline quartz. The value of the mineral products of the State in 1908 was \$11,052,151, as compared with a value of the product in 1907 of \$13,832,395.

AGRICULTURE AND STOCK RAISING. The acreage, production, and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 50,589,000 bushels, valued at \$30,353,000, from 1,533,000 acres; winter wheat, 1,204,000 bushels, valued at \$1,156,000, from 59,000 acres; spring wheat, 2,280,000 bushels, valued at \$2,189,900, from 120,000 acres; oats, 79,800,000 bushels, valued at \$31,122,000, from 2,280,000 acres; barley, 24,248,000 bushels, valued at \$13,579,000, from 866,000 acres; rye, 4,727,000 bushels, valued at \$3,214,000, from 290,000 acres; buckwheat, 221,000 bushels, valued at \$172,000, from 18,000 acres; flaxseed, 200,000 bushels, valued at \$392,000, from 20,000 acres; potatoes, 26,724,000 bushels, valued at \$10,155,000, from 262,000 acres; hay, 3,625,000 tons, valued at \$34,800,000, from 2,369,000 acres; tobacco, 37,170,000 pounds, valued at \$3,419,640, from 31,500 acres. The farm animals of the State on January 1, 1910, were estimated as follows: Horses, 669,000; mules, 5000; dairy cows, 1,506,000; other cattle, 1,081,000; sheep, 1,034,000; swine, 1,651,000. The wool clipped in the State in 1909 was estimated at 5,679,380 pounds.

FISHERIES. The value of the products of the fisheries of the State for the year ending December 31, 1908, was \$1,067,170. Of these products the most important in point of value was trout, of which 4,710,100 pounds, valued at \$340,360, were taken. Next were herring, 12,123,900 pounds, valued at \$322,430. Buffalo, to the value of \$103,480; whitefish, \$56,320; yellow perch, \$54,730; pike and pickerel, \$22,600; and crawfish, \$13,930, were among the other important fish taken in considerable quantities. There were 1120 independent fishermen engaged in the fisheries of the State and 891 wage-earning fishermen employed. The number of vessels engaged was 89, valued at \$194,101.

EDUCATION. The school attendance in 1909

amounted to \$11,223,262.

CHARITIES AND CORRECTIONS. There are ten institutions under the administration of the State Board of Control. These are the State Hospital for the Insane, the Northern Hospital for the Insane, School for the Deaf, School for the Blind, Industrial School for Boys, State Prison, State Public School, Home for Feeble-Minded, Wisconsin State Reformatory, and the Wisconsin State Tuberculosis Sanatorium. The total number of inmates in the various institutions on November 1, 1909, was 4055. At the same date there were 6528 insane persons under public care. The Wisconsin system of caring for the insane is different from the system of any other State, inasmuch as it separates the chronic from the acute insane. There are in the two hospitals for the insane about 1300 inmates, and of that number not more than 10 per cent. are chronic patients. All chronic patients are transferred to county asylums as soon as it has been determined that they are chronic. The expenditures for the various State institutions for the year ending June 30, 1909, was \$1,373,490.

POLITICS AND GOVERNMENT. The legislature met in regular session on January 14. Resolutions were at once introduced in both houses of the legislature calling for investigation of the manner, means, and methods by which the primary campaign and election of 1908 were conducted. The resolution was understood to be directed against Senator Isaac Stephenson, who won the Republican nomination for reelection after a close contest. The biennial message of Governor Davidson contained recommendation for a new mode of taxing personal property, for an amendment of the inheritance tax, and for other amendments to the laws in regard to taxation. He recommended a change in the public utility law to permit various minor privileges to the public, and another amendment to limit the right of the railroads to raise rates. He advocated also the placing of telephone companies under the stock and bond law, which requires the rate commission to approve any proposed issue of securities. He urged the placing of a limit in the amount which may be spent by a candidate in seeking office, and the devising of some plan by which members of one party cannot invade the primary of the other party and control the nomination. He recommended the safeguarding of deposits in trust companies to the same extent as prevails in savings banks, and requiring that bank directors be holders of a substantial amount of stock in their respective banks. He advocated steps to minimize the destruction of forests by fire, and the carrying out of some policy of reforestation. He advocated a system of industrial arbitration providing a State board to take all evidence in labor disputes and make its findings public. In view of the new \$6,000,000 capitol, he urged conservatism in expenditure.

The legislature adjourned before giving final consideration to the most important measures before it, having by joint resolution referred these subjects to special legislative committees which were to report at a special session. The subjects referred to special legislative commit-

tee and a State income tax.

All of these committees made extensive investigations, some of the committees going to various parts of the United States. The committees were appointed upon the theory that early in the year 1910 a special session of the legislature would be called to take up these subjects. It was also contemplated that an important constitutional provision permitting the appropriation of moneys for the purpose of acquiring, preserving, and developing the water powers and forests of the State should be considered at the special session, and for this reason this amendment failed of adoption.

The election of Senator Stephenson by the legislature was brought about only after a protracted struggle which lasted from January 28 until March 4. Senator Stephenson received the Republican nomination at the primaries, but his election was opposed on the plea that it should be delayed until the joint legislative committee which had been appointed to conduct hearings on the charges of corruption in the election had made its report. His election, however, was accomplished prior to the making of such a report. The primary election law of Wisconsin requires the publication of campaign expenditures within thirty days after election. All the other candidates made public their expenditures shortly after the primaries. Mr. Stephenson refused to make public his expenditures on the ground that he was not compelled to do so until thirty days after the date of his election by the legislature. He denied that he had spent money for corrupt purposes, although he was reported to have expended more than \$100,000 in the campaign which resulted in his nomination. At the first roll call in the legislature only 63 votes could be mustered for Senator Stephenson, the number needed to elect being 67. For 22 ballots the vote remained the same, but on the 23d ballot he received a sufficient number of votes to insure his election. The report of the legislative committee in effect exonerated Senator Stephenson of corrupt practices. On March 31 the State Senate defeated the proposed bill for local option by a vote of 17 to 11. At an election held on April 6, in which nearly 200 cities and towns voted on the no-license question, the license advocates won a sweeping victory, carrying nearly all the important towns which voted, among them Appleton, Beloit, and Sparta. On April 28 the woman's suffrage bill, which had passed the Senate, was killed in the Assembly after a long debate by a vote of 53 to 34. See ELECTORAL REFORM.

OFFICERS: Governor, J. O. Davidson; Lieutenant-Governor, John Strange; Secretary of State, James A. Frear; Treasurer, Andrew H. Dahl; Attorney-General, Frank L. Gilbert; Superintendent of Education, C. P. Cary; Commissioner of Insurance, George E. Beedle—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, John B. Winslow, Dem.; Associate Justices, William H. Tienlin, Dem.; R. G. Siebecker, Dem.; J. E. Dodge, Dem.; Roujet D. Marshall, Rep.; J. C. Kerwin, Rep.; John Barnes, Dem.; Clerk, Clarence Kellogg, Rep.

The State Legislature of 1909 was composed of 28 Republicans, 4 Democrats, and 1 Social Democrat in the Senate, and 80 Republicans, 17 Democrats, and 3 Social Democrats in the Assembly. The State representatives in Congress will be found in the section *Congress* in the article *UNITED STATES*.

WISCONSIN, UNIVERSITY OF. An institution of higher learning at Madison, Wis., founded in 1848. The attendance in 1908-9 was 4521, and the faculty numbered 397. There were in the general library, 119,044 volumes, in the law library 15,936, and in the agricultural library about 10,000, making a total of 144,980. Additions were made to the trust fund during the year. Among the changes made in the University administration during the year was the transfer of the department of home economics from the college of letters and science to the college of agriculture. A middle course in agriculture extending over two years has been established, also a course in chemistry extending over four years, and a course in mining engineering extending over four years. There has also been established a course for the training of teachers. The University comprises the college of letters and science, college of engineering, college of agriculture, graduate school, college of law, school of music, course in pharmacy, college of medicine, and the courses mentioned above. In addition to these a correspondence course is maintained with a registration of about 1500. Summer sessions are held each year, and over 1000 students are usually in attendance. The income of the University is over \$1,000,000, practically all of which is received from the State and from the United States government. The President is C. R. Van Hise.

WITHROW, JOHN LINDSAY. An American Congregational clergyman, died September 25, 1909. He was born in Coatesville, Pa., in 1837, and graduated from Princeton University in 1860. He then devoted three years to the study of theology at Princeton, and in 1863 was ordained to the ministry in the Second Presbyterian Church, at Philadelphia. After pastorates in churches in Abington, Pa., Philadelphia and Indianapolis, he became pastor of the Park Street Church, in Boston, in 1876. After ten years' service here he received and accepted a call to the Third Presbyterian Church, in Chicago, in 1887. He returned, however, to the Park Street Church in 1898, and was its pastor until his death.

WOMAN'S COLLEGE OF BALTIMORE. An institution for the higher education of women at Baltimore, Md., founded in 1888. The attendance in 1909 was 366 students, and 28 members of the faculty. There were in the library 12,000 volumes. In 1909 Dr. L. A. Blue was appointed professor of education; R. M. Gay associate professor of English; Miss Lula Joslin instructor in physics; Miss Mabel Bishop assistant in physiology, and Miss Elizabeth Gotch assistant in chemistry. The productive funds of the college amount to about \$800,000, and the total income to \$115,000. The president is Eugene A. Noble, S. T. D.

WOMAN SUFFRAGE. In all countries for which reports were available the suffrage movement in 1909 showed increased numbers and influence. Vigorous campaigns were carried on in Great Britain, the United States, South

Africa and the Continent of Europe. There were, however, no actual achievements in the matter of legislation at all comparable to those of the three preceding years, the grant of the suffrage to women in Finland (1906), in Norway (1907) and in Victoria, Australia (1908).

UNITED STATES. In four States of the United States, namely, Wyoming, Colorado, Utah and Idaho, women are admitted to the suffrage in all elections. They may vote in school elections in twenty-nine States, including the four already named and Arizona, Connecticut, Delaware, Florida, Illinois, Indiana, Kansas, Kentucky, Massachusetts, Michigan, Minnesota, Mississippi, Montana, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oklahoma, Oregon, South Dakota, Vermont, Washington and Wisconsin. In Kansas, besides the school suffrage women may vote in municipal elections and on the question of bond issues. In Montana, Louisiana and Michigan women tax payers may vote on questions of taxation. In New York, women having property "assessed upon the last preceding assessment roll" of the village may vote on a proposal to raise money by tax or assessment. In Minnesota, women may vote for library trustees. Such was the status of woman suffrage in the United States in 1909. Though nothing was accomplished during the year so far as actual legislation was concerned it was a year of unprecedented activity and of greatly increased interest in the movement throughout the entire country. The meetings were too numerous to chronicle. The amount of space given to the discussion in the press and the amount of controversial literature published was unequalled. By the end of 1909 campaigns for the submission to popular vote in 1910 of the question of amending the constitution to provide for universal suffrage were successfully carried out in four States, namely, Washington, South Dakota, Oklahoma and Oregon. The 41st annual convention of the National American Woman Suffrage Association was held at Seattle, Washington, July 1-6, 1909. Reports of progress of the movement were read for the different States. Although the suffrage bills introduced into the State legislatures in 1909 were rejected or shelved there were more spirited hearings and a greater degree of interest than in previous years. The next meeting of the Association was appointed for April 14-19, 1910, at Washington, D. C.

GREAT BRITAIN. In Great Britain women may vote for all officers except Members of Parliament. When the Liberal Ministry came into power in 1906 the woman suffrage movement had attained a high degree of influence. The members of the National Union of Women's Suffrage Societies had greatly increased in recent years. Moreover through such important bodies as the Women's Liberal Federation, the Primrose League and the temperance societies, women had taken an active part in political affairs and shown in many instances that their influence must be reckoned with. The Prime Minister, the late Campbell-Bannerman, was an avowed supporter of woman suffrage. The influence of women on Parliament was illustrated in 1908, when the clause of the Licensing bill excluding women from employment at the bars or in the offices of public houses was withdrawn in the House of Commons before it was sent to the Lords, who, as will be remembered,

a deaf ear to the immediate demands of "votes for women," of the numerous petitioners and agitators who beset them in 1908 and 1909. Mr. Asquith not only paid no attention to the importunities of the unruly suffragettes, but refused to receive the representatives of the law-abiding suffrage societies. No practical result, so far as Parliament was concerned, was attained by the numerous disorderly meetings and attempts to waylay public men and interrupt public business in 1908 and 1909. Great Britain continued in 1909 to be the storm centre. The militant element pursued their tactics of harrassing the members of the Cabinet and of interrupting speakers on public platforms. As in the previous year a great many arrests were made. While in prison a number of these women refused food except under the compulsion of the prison authorities. These and similiar tactics continued to keep the subject before the public, and to that extent realized the purpose of the agitators. For some typical instances of the policy of the militant suffragists in 1909, see **GREAT BRITAIN**, paragraphs in *History*. The chief organization in Great Britain, the Union of Women Suffrage Societies, has steadily opposed these violent methods. Its president, Mrs. Millicent Fawcett, at the meeting of the International Woman Suffrage Alliance, April 26-May 1, declared: "Opinions greatly differ in Suffrage circles as to the effect produced on the Suffrage cause by what are known as 'militant' tactics. It is difficult for one who is completely identified with constitutional methods to judge aright the total result of unconstitutional forms of agitation. That the 'militants' have been courageous and self-sacrificing no one denies. That they have provoked discussion and aroused attention is equally obvious, and from these our cause always stands to gain. On the other hand, many of us feel a profound conviction which experience only strengthens, that women are adopting a mistaken course in appealing to violence. Our business as women asking for justice is not to rely upon physical force but in the eternal principles of right and justice. Law-abiding methods alienate no one, while methods of violence and disorder create anti-Suffragists by the hundred." The Union issued public statements in October condemning the resort to violence in political propaganda. In February on the assembling of Parliament a universal Adult Suffrage bill was introduced, and came up for its second reading on March 19, but as its introducer pledged himself not to proceed further with it, comparatively little interest was shown, and it passed by a majority of only 35 as against the majority of 179 given to the bill of 1908.

OTHER COUNTRIES. Women have the full suffrage in the Commonwealth of Australia, and are eligible to office. Since 1908 when Victoria accorded them the suffrage in state elections, they have the full suffrage in all the Australian states. They also have the full suffrage in New Zealand, Norway, and Finland. Norway's law dates from 1907, when full parliamentary suffrage was bestowed on women who already had municipal suffrage. Finland, by the law of 1906, gave the full national suffrage and made

in commerce may vote for the Judges of the Tribunal of Commerce, and may serve as Judgea. **WOMEN IN INDUSTRY.** The National Women's Trade Union League held its second convention at Chicago during the week of September 27. There were 71 delegates present, representing the organized women in such widely scattered cities as Boston, New York, Rochester, St. Louis, Springfield, Ill., St. Paul, Kansas City, Denver, and San Francisco. Delegates were sent from the British Women's Trade Unions League and the German Union of Female Mercantile Employees, the latter a union of 25,000 clerks, stenographers and bookkeepers. After many most lively discussions the convention adopted the following legislative programme, which sets a standard for the demands of women workers upon State legislatures: The eight-hour day; elimination of night work; protected machinery, sanitary workshops; separate toilet rooms; seats for women and permission for their use when the work allows; pensions for working mothers during the lying-in period; an increased number of women factory inspectors, based on the percentage of women workers; the appointment of women physicians as health inspectors of factories and workshops where women and children are employed; and a legal minimum wage in sweated trades. The convention adopted a resolution favoring woman-suffrage, but with the demand that woman suffragists join in the campaign for further legislative protection of female workers. Some of the officers of this League took a leading part in the strike of the shirt-waist makers in New York. See **STRIKES AND LOCKOUTS**.

LEGISLATION. The following is a brief summary of the legislation passed in 1909 affecting women in industry. Arizona set the very high standard of an 8-hour day and a 48-hour week for women of all ages, with heavy fine upon employers for violation. Michigan fixed a 10-hour day and 54-hour week, except during the canning season, for all women and boys and girls under 18. Missouri provided a 54-hour week for all women; Rhode Island, a 10-hour day and a 56-hour week, in all manufacturing and mercantile establishments, for all women and boys under 16. Massachusetts provided similar hours for all girls and boys under 18 in manufacturing and mechanical establishments, and 58 hours per week, for all girls and boys in mercantile establishments. Minnesota restricted hours to 58 per week for all women in manufacturing and mercantile employments; New Hampshire to 9 hours and 40 minutes per day, and 58 hours per week, for all women and boys under 18 in manufacturing; Maine, to 10 hours per day and 58 per week for all girls under 18 and boys under 16; and Connecticut to 10 hours per day and 58 hours per week for all persons under 16, in manufacturing and mercantile pursuits. A 10-hour day and a 60-hour week were required in Indiana, for boys under 16 and girls under 18 in all industrial pursuits; in Louisiana, for boys under 18 and all women in unhealthful or dangerous occupations; in Nebraska, for all women in all industrial pursuits; in New York for all women in manufacturing establishments, and for women of ages 16 to 21 in mercantile establishments, except from

December 15 to January 1; in Oregon for all ages and all industrial pursuits; in South Carolina, for all operatives in cotton and woolen mills. In every case penalties were provided for violations, in most cases these penalties being adequate; moreover, the fact of employment during forbidden hours or during hours not included in the schedule required to be posted daily, was in many cases sufficient evidence to convict.

GREAT BRITAIN. There is an undoubted tendency toward better and more extensive organization among women workers. This is especially true in Germany, the United States, Australia and Great Britain. The British Women's Trade-Union League, which held its sessions at Ipswich in September (see TRADE UNIONS) claims 250,000 affiliated members in England, Scotland and Ireland. About 60 per cent. of these are in the cotton mills of the Lancashire district, and they together constitute over 8 per cent. of English trade unionists. This movement in England is intimately connected with the woman suffrage movement, each furthers the other both directly by active propaganda, and indirectly by stimulating class consciousness. It is significant that women were this year admitted as delegates to the Trade Union Congress, and that English trade unions strongly favor the unionization of women workers. The effect on English politics, should the woman-suffrage agitation succeed, would be momentous, considering the Socialistic tendencies of the English labor vote.

A notable achievement in the way of protective legislation, was the passage by Parliament of the Trade Boards bill, popularly called the Sweated Industries bill. This provides machinery for the fixing of the maximum number of hours and the minimum time and piece wages in the tailoring, chainmaking, lace finishing and card-board box making industries. Under the direction of the Board of Trade, all employers in each of these industries shall join in choosing representatives to a trade board; the employees shall choose an equal number; and these, with an independent chairman, shall have power to determine maximum hours and minimum wages. Violation is made punishable by fine or imprisonment.

GERMANY. The Industrial Amendment act, passed early in the year, reduced the weekly maximum number of hours for women from 65 to 58; extended by one hour the period during which night work is prohibited; provided that after each day's work eleven hours of rest must elapse. The act applies also to all workers of both sexes under sixteen years of age. It is expected to lead to the Saturday half-holiday.

WOMEN'S CLUBS, GENERAL FEDERATION OF. An organization founded in 1892. It is composed of individual clubs in State and Territorial federation, and there are affiliated organizations with large membership lists. There are in the United States about 4500 Women's Clubs affiliated with the General Federation. The membership is about 500,000. Clubs applying for membership must contain no sectarian or political test in their constitution, the object being social, literary, artistic, or scientific culture. The officers in 1909, were as follows: President, Mrs. Philip M. Moore; first vice-president, Mrs. Josiah Evans Cowles; second vice-president, Mrs. John Dickinson Sherman; recording secretary, Mrs. Henry H. Dawson; corresponding secretary,

Mrs. Frank N. Shiek; treasurer, Mrs. George O. Welch, and auditor, Mrs. L. L. Blankenburg.

WOODWARD, DAVIN A. An American educator and artist, died November 29, 1909. He was born in 1823 in Philadelphia. While still a young man he went to Baltimore where he was placed in charge of the Maryland Institute, where he remained for 25 years. He discovered the solar print method of portraiture, and in his later years devoted himself to portrait painting. He was said to be the oldest Mason in the State of Maryland, having joined that body in 1847.

WOOL. See STOCK RAISING, and the articles on the STATES.

WORKMEN'S COMPENSATION. See EMPLOYERS' LIABILITY AND LABOR LEGISLATION.

WORTHINGTON, HENRY C. An American soldier and public official, died July 29, 1909. He was born in Cumberland, Md., in 1828, and after studying law removed to California. He was successively a member of the California Legislature, Delegate in Congress from Nevada, Collector of the Port of Charleston, S. C., Minister to Uruguay, Judge of a United States Court, and major-general of militia. He was an intimate friend of Lincoln, and was the last survivor of the pall-bearers at the latter's funeral.

WRESTLING. In professional wrestling circles, the chief contest of 1909 was that between Frank Gotch and Yussif Mahount for the heavy-weight title. Gotch won in two straight falls, the first taking 8 minutes, and the second, 9 minutes 8 seconds. The light-weight professional championship went to Max Lutberg, and the middleweight to Henry Gehring. The national championships of the Amateur Athletic Union were decided as follows: 120-pound class, George Taylor, Newark; 115-pound class, Gus Bauers, Newark; 125-pound class, Louis Ruggerio, New York; 135-pound class, D. Fleisher, New York; 145-pound class, C. Johnson, Swedish-American A. C.; 158-pound class, Fred Nargies, New York, and heavyweight class, E. N. Payne, New York.

In the intercollegiate bouts Yale for the sixth time won the championship with a total of 13 points. Princeton scored 8, Cornell 6, and Pennsylvania 1.

WRIGHT, CARROLL DAVIDSON. An American economist and educator, died February 20, 1909. He was born at Dunbarton, N. H., in 1840. He received an academic education, and began the study of law. He abandoned this, however, to enlist as a private in the Civil War, where he rose to the rank of colonel. He served in the Massachusetts State Senate in 1872-3, and was chief of the State Bureau of Statistics and Labor from 1873 to 1888. In 1880 he was appointed Supervisor of the United States census for Massachusetts, and in 1885 was appointed United States Commissioner of Labor, holding the office until 1905. During this time he directed the completion of the 11th census. In 1902 he served as member and recorder of the Anthracite Coal Strike Commission. He held chairs and lectureships in various universities until 1902, when he became president of Clark College. President Wright was a voluminous contributor to periodicals on economic and statistical subjects, and wrote also many books, among them the following: *The Factory System of the United States*

English scholar, died on March 22, 1900. He was born in Dublin, in 1836, and was educated at Trinity College, Dublin, and at Exeter College, Oxford. He studied also at Leipzig. From 1859 to 1898 he preached in various charges, but his most notable work was as lecturer and examiner at several universities. He was Bampton Lecturer at Oxford, in 1878, and Grinfield Lecturer in Septuagint, 1893-97, at the same university. He also acted as examiner and lecturer at Trinity College, Dublin; University of London; Victoria University, Manchester, and the University of Wales. In 1898 he became clerical superintendent of the Protestant Reformed Society. Dr. Wright was a voluminous writer. Among his works are: *Grammar of Modern Irish* (1858); *Biblical Essays* (1885); *Bible Readers' Manual* (3d ed. 1896); *Genuine Writings of St. Patrick, with Life* (1902); *Daniel and his Prophecies* (1902), and *The Book of Isaiah and other Historical Studies* (1906). He was also joint editor of the *Statutory Prayer Book* (1902).

WYLLIE, SIR WILLIAM HUTT CURZON. An English East Indian official, assassinated by an Indian student, Dhenigra, on July 1, 1909. He was born in Cheltenham, England, in 1848, and was educated at Marlborough and Sandhurst. In 1866 he entered the army, and in 1869 was appointed to the Indian Staff Corps. He was transferred to the political department in 1879. He fought in the Beluchistan War, and in the Afghan campaign of 1879 and 1880, and received a decoration for his services in the relief of Kandahar. In 1881 he was made secretary to the Governor of Madras. He was successively Resident in Nepal, Governor-General's Agent in Central India, and Governor-General's Agent in Rajputana. He rose to the rank of lieutenant-colonel. Lieutenant-Colonel Wyllie was shot while attending a reception at the Imperial Institute in London. His murderer was an educated Indian about 20 years of age, and was a stranger to his victim. Dhenigra killed, at the same time, Dr. Lalcaca, a physician of Shanghai. See INDIA, paragraphs on *History*.

WYOMING. One of the Western Division of the United States. Its area is 97,914 square miles. The population in 1909, according to a Federal estimate made in that year, was 109,244.

MINERAL PRODUCTION. The State is an important producer of coal. There were mined in 1908, 5,489,902 short tons, with a spot value of \$8,868,157. The coal mining industry of the State suffered in 1908 from an over supply of fuel mined during the summer and early fall of 1907, when, because of repeated warnings of a fuel famine by the transportation companies, consumers laid in supplies of fuel in order to avoid a repetition of the preceding winter when the public suffered greatly from the scarcity of coal. The coal mined in 1908 decreased from that mined in 1907 by 763,068 short tons in quantity, and \$864,511 in value. In September a number of mines were shut down on account of failure to agree on the wage scale. After an idleness of thirty days some of the mines resumed operations, and in a short time the others followed. As a result of the agreement made with the United Mine Workers, nearly all the

Hanna, No. 1 Mine of the Union Pacific Coal Company, which resulted in the death of 59 men, including the mine inspector of the district and many men who were engaged in rescue work. The State produces copper. In 1908 the production amounted to 2,416,197 pounds, as compared with 3,026,004 pounds in 1907. The State produces also, although in relatively unimportant quantities, clay products, gold, gypsum, lime, silver, stone and precious stones. The value of the mineral products of the State in 1908 was \$0,453,341, as compared with \$10,671,574 in 1907.

AGRICULTURE AND STOCK RAISING. The acreage, production and value of the principal farm crops of the State in 1909, according to figures of the United States Department of Agriculture, were as follows: Corn, 140,000 bushels, valued at \$109,000, from 5000 acres; winter wheat, 812,000 bushels, valued at \$804,000, from 25,000 acres; spring wheat, 1,485,000 bushels, valued at \$1,470,000, from 55,000 acres; oats, 3,500,000 bushels, valued at \$1,750,000, from 100,000 acres; barley, 124,000 bushels, valued at \$92,000, from 4000 acres; rye, 26,000 bushels, valued at \$23,000, from 1000 acres; potatoes, 1,000,000 bushels, valued at \$1,008,000, from 10,000 acres; hay, 665,000 tons, valued at \$5,918,000, from 277,000 acres. The number of farm animals in the State on January 1, 1910, was as follows: Horses, 148,000; mules, 2000; dairy cows, 27,000; other cattle, 959,000; sheep, 7,316,000; swine, 21,000. Wyoming ranks first among the States in the number of sheep. The wool clipped in 1909 was estimated at 37,664,000 pounds.

About 15,000 new people settled in the State in 1909, with the object of farming by irrigation or by the dry farming methods.

EDUCATION. During the school year 1909 the number of pupils enrolled was 23,182. The number of pupils of school age between the ages of 6 and 21 in the State was 29,780. The number of male teachers was 121, and female, 854. The average monthly compensation of male teachers was \$75.57, and of female teachers, \$56.84. During the session of the legislature of 1909, there were several laws enacted relating to the schools of the State. A law providing for the wider classification of certificates, the extent of the power of the State Board of Examiners, and granting authority to the State Superintendent on recommendation of the State Board of Examiners to revoke certificates already issued, was enacted. A much larger appropriation for conducting county institutions was provided. The total expenditure for the schools of the State in 1909 was \$678,773.

POLITICS AND GOVERNMENT. The most important measures passed at the legislative session of 1909 will be found in the paragraph *Legislation* below. In March a settlement was effected of the suit against the Union Pacific Railway, brought by the government, involving coal lands in the State, estimated to be worth a million and a half dollars, and embracing about 4600 acres. It was claimed that this land was acquired by agents of the company through what is known as "dummy" interests. The company did not defend the suit, but instead, reconveyed the lands to the government, and

also paid nearly \$33,000 in settlement of the coal mined on the land. In addition, the company lost about \$90,000, paid as purchase price for the land.

LEGISLATION. Never since the organization of the Territory or State, had there been any uniform method or standard of assessing property. Tax dodging was the rule, and property was returned at about twenty cents on the dollar. Much was not returned at all. The last legislature provided for a Commissioner of Taxation, with full power to enforce the law, assessing property at its full market value, and to assess mortgages; also to find all the property. The assessed valuation of the State under the new system rose from sixty millions to two hundred millions in 1909. Saloons were also legislated out of all unincorporated towns and villages.

OFFICERS: Governor, B. B. Brooks; Secretary of State, Wm. R. Schnitger; Treasurer, Edward Gillitte; Auditor, Leroy Grant; Adjutant-General, P. A. Gatchell; Attorney-General, W. E. Mullen; Superintendent of Education, A. D. Cook—all Republicans.

JUDICIARY. Supreme Court: Chief Justice, Chas. M. Potter; Associate Justices, Cyrus Beard, Richard H. Scott; Clerk, W. H. Kelly—all Republicans.

The State Legislature of 1909 was composed of 21 Republicans and 2 Democrats in the Senate, and 45 Republicans and 5 Democrats in the House. The State representatives in Congress will be found in the section *Congress* of the article *UNITED STATES*.

WYSE, LUCIEN NAPOLEON BONAPARTE. A French engineer, died June 15, 1909. He was born in 1845, the son of Sir Thomas Wyse and Princess Letitia Bonaparte. He was, for a time, an officer in the French navy, and on his retirement he conducted a series of explorations in Central America. These led to the perfecting of the project of the Panama Canal. Through his activity France secured concessions from Colombia, and when these were in danger of lapsing, he arranged for a prolongation. He later turned over his interests in the enterprise to Count Ferdinand de Lesseps. Wyse's book on the canal was crowned by the French Academy in 1885. Among his other works are: *Travels Through the Andes and Pampas* (1869); *From Montevideo to Valparaiso by the Straits of Magellan and the Patagonian Canals* (1877).

YACHTING AND MOTORBOATING. The principal yachting event of 1909 was the international contest off Marblehead, Mass., for the cup offered by President Taft. The entries included three German under yachts—*Hevelia*, *Seehund II*, and *Margarethe*—and three American yachts—*Wolf*, *Joyette* and *Ellen*. Six races were sailed between August 30 and September 7, of which the *Joyette* won three, and the *Ellen* two. The *Hevelia* was the only German boat to win a race, having been the victor in the third sailed. The 670-mile race from New York to Bermuda, held on June 5-8, was won by G. S. Runk's *Margaret*, whose corrected time was 73 hours 51 minutes 12 seconds. W. L. Baum's *Amorita*, which finished third in the elapsed time of 78 hours 19 minutes 15 seconds, broke all previous records for the race. Other important ocean races in 1909, and the winners of each were: City Island to Vineyard Light-

ship (285 miles) H. A. Jackson's *Victory*; Cape May race (325 miles) for schooners, W. C. Torven's *Tammany*; New York to Block Island (100 miles), A. C. Jones's sloop *Nutmeg*. The Astor and King Edward cup races were held at Newport, R. I., August 6-7. The winners of the various cups were: Sloop cup, A. S. Cochran's *Avenger*, also the winner in 1908; schooner cup, F. F. Brewster's *Elmina*; King's cup, G. M. Pynchon's *Istalena*.

Motor boating in 1909 experienced a remarkable increase in popularity, more races and regattas being held than ever before. Of worldwide interest was the Monte Carlo Motor Boat Carnival, in which several different countries were represented. The principal race of the carnival was the Coupe des Nations, which was won by the *Wolseley-Siddeley*, a Great Britain entry. The German boat *Lesetotte* finished second. E. J. Schneder's *Dixie II*, the only American contestant, had to quit early in the race. A carnival in the United States which attracted considerable interest was that held in the Hudson River in September. Of the ocean races in 1909, the more important were the New York to Bermuda (650 miles), won by R. Levering's *Heather*; the Bermuda to New York, won by J. G. H. Whitaker's *Hys*, and the New York to Marblehead (285 miles), won by F. D. Giles's *Elo II*.

YALE UNIVERSITY. An institution of higher learning, at New Haven, Conn., founded in 1701. The attendance in 1908-9 was 3450, and the number of officers was 485. The students were divided as follows: Graduate school, 385; college, 1273; Sheffield scientific school, 953; art school, 47; music school, 95; forest school, 70; department of theology, 106; department of medicine, 140; department of law, 434. Among the changes in the faculty during the year were the retirement of Professor William Graham Sumner, professor of political and social science, and Bernadotte Perrin, professor of Greek history. In addition to these retirements, Charles Hubbard Judd, professor of psychology, resigned to accept the headship of the school of pedagogy at the University of Chicago. Ambrose White Vernon resigned the chair of practical theology to resume active work in the pulpit, and John Hay Hammond, resigned as a member of the Governing Board of the Sheffield scientific school. Professor Leslie Paige Breckenridge, of the University of Illinois, became the head of the courses in mechanical engineering, and Rev. Henry Hallam Tweedy succeeded Professor Vernon in the chair of practical theology. Mr. Hammond's place was filled by James Farley McClelland, of Leland Stanford Jr. University, as professor of mining engineering. Professor Henry Crosby Emery of the department of political economy, was appointed by President Taft, chairman of the newly created tariff board, and Lee McClung, treasurer of the University, resigned his position to become Treasurer of the United States, by the appointment of President Taft. The most important individual contribution made to the University during the year was a gift of \$100,000 from Mrs. Morris K. Jesup, for a professorship of silviculture in the Forest School, in memory of her husband. There were received during the year a large number of anonymous gifts, which, added to those otherwise received, will enable the University to meet the conditions of the General Education Board

came to the University. The library contained, in 1908-9, about 550,000 volumes. The gross addition to the funds of the University for the year, not including specific gifts to income, amounted to \$1,400,455, and gifts to income amounted to \$69,059. The available receipts for expenses amounted to \$1,240,208, and the expenditures to \$1,226,269. The funds of the University amounted on June 30, 1909, to \$10,362,731, which includes real estate. The president is Arthur T. Hadley.

YI WAN YON. Prime Minister of Korea, assassinated December 22, 1909. He had held the office of Prime Minister since May, 1907, when the Korean Cabinet was rearranged at the suggestion of Japan. He was previous to that time Minister of Education, and Marquis Ito secured him the premiership by exerting his influence with the Emperor of Japan. He was the strongest supporter of Japan's policy in Korea. Late in 1909 he was admonished by Viscount Sone, the Japanese Resident-General, for overactivity in opposing the Ilchinhui party, and agitating for amalgamation with Japan.

YOUNG, ELLA (FLAGG). See EDUCATION IN THE UNITED STATES, and ILLINOIS.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An undenominational association for the carrying on of all departments of Christian work. The first association was organized in London, in 1844. They now exist in every continent and in nearly every country of the world. In America they are found in 10 countries; in Europe, in 24; in Asia, 12; in Africa, 5; and in Australasia, 3. The total membership of the association in 1909 was 836,186. The associations occupied 1214 buildings, valued at \$58,045,900, and there were 1492 paid general secretaries. In North America there were 1914 associations, with 456,924 members and 680 buildings, valued at \$46,872,630. There were 2687 employed officials. In the educational classes under the auspices of the association were 46,945 members: In physical work, 216,262; in Bible classes, 92,586. By departments the classifications were as follows: Members in the railroad association, 75,721; in student associations, 53,590; in college associations, 10,460; in boys' departments, 82,830. In city associations there were 62,067 men in industrial occupations. For current expenses there were expended in 1909, for local work, \$6,783,495; State and provincial work, \$422,332; internal committee—home work, \$254,839; foreign mission work, \$178,857. There were 69 international employed secretaries in the home field, and 80 in the foreign field. The North American International Committee is composed of Lucien C. Warner, chairman; F. B. Schenck, treasurer; and R. C. Morse, general secretary.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION, NATIONAL BOARD OF. An organization formed in 1906, to unite in one body the Young Women's Christian Associations of the United States, to establish, develop, and unify such associations, to advance the physical, social, intellectual, moral and spiritual interests of young women, and participate in the work of the World's Young Women's Christian Association. The national organization con-

tinues resident members, and 1 representative from each of the Territorial and State committees. It maintains a staff of 23 national secretaries and special workers, and an office staff of 27. The membership is about 120,000. The Association maintains a national training school, and eight preliminary training centres, and also does valuable work in providing young women with employment and with accommodations for living. The World's Young Women's Christian Association was founded in 1894, and 17 national associations are now affiliated. These are Great Britain, United States, Germany, Italy, France, Australasia, Finland, Holland, Japan, Canada, Portugal, South Africa, China, Sweden, India, Denmark and Hungary. The Executive Committee is composed of a resident membership in London, and two representatives from America and other countries. The headquarters are in London. The Fourth World's Conference will be held in Berlin, Germany, in 1910. The president is Miss Grace H. Dodge, and General Secretary, Miss Mabel Cratty.

YUAN SHIH-KAI. See CHINA, paragraphs on *History*.

ZALINSKI, EDMUND LOUIS GRAY. An American military officer, died on March 10, 1909. He was born at Kurnich, Prussian Poland, in 1849. His parents came to the United States when he was four years of age. In 1864 he entered the Union Army as aid-de-camp to General Nelson A. Miles. He served to the end of the war. He was professor of military science in the Massachusetts Institute of Technology from 1872 to 1876. From 1883 to 1889, he devoted his attention to the development and perfecting of pneumatic dynamite torpedo guns. He retired from active service in 1894, and was promoted to the rank of major in 1904. Major Zalinski invented several important military devices.

ZANZIBAR. A British protectorate on the eastern coast of Africa, composed of the islands of Zanzibar (640 square miles), Pemba (380), Lamu (56), Manda, Patta, and Siwa; a ten-mile coast line from Wanze to Kipini; and the port of Kismayu with a ten-mile radius. Estimated population of Zanzibar (1907), 176,000; of Pemba, 60,000. Capital, Zanzibar, with 55,750 inhabitants. The negroes are mostly Swahili; the Arabs number about 10,000, and control a great part of the industrial interests. The foreign population is largely engaged in trading. Mohammedanism (Sunni sect), is the prevailing belief; the Sultan and his family are of the Ibadhi sect. There are Protestant and Catholic missions. Zanzibar produces four-fifths of the world's clove crop, copra, ivory, rubber and gum-copal. The imports in 1908 amounted to £969,841, against £1,232,957 in 1907; exports, £977,628, against £1,070,067 in 1907. The principal articles of export were valued (1907) as follows: Cloves, £396,121; copra, £137,633; ivory, £57,502. The countries of origin and destination for two years are given on next page.

The statistics are for goods actually handled at the port of Zanzibar, and take no account of great quantities of goods passing through Zanzibar in mail and other steamers, and those

	1907	
	Imports	Exports
British India	£490,892	£197,944
Great Britain	193,242	142,474
German East Africa.....	128,127	107,638
Germany	62,022	146,085
United States	47,983	39,170

	1908	
	Imports	Exports
British India	£344,538	£265,387
Great Britain	184,175	89,891
German East Africa.....	110,838	197,658
Germany	40,240
United States	32,690

transhipped from one coasting vessel to another in the harbor without being handled; and they give, therefore, an inadequate idea of the importance of Zanzibar as the centre of trade in East Africa. The total tonnage of ocean-going steamers entered at the port in 1908 was 445,350, exclusive of a large coasting and dhow traffic extending to Bombay, Arabia, the Comoro Islands, and Madagascar. There are seven miles of light railway. The Sultan (Sezzid), Ali bin Hamond (born June 7, 1884, succeeded his father July 20, 1902), is a mere figurehead. British Agent and Consul-General (1909), E. A. W. Clarke. The Zanzibar domains on the mainland extending to the mouth of the Juba are administered by the Governor of the East Africa Protectorate.

ZERRAHN, CARL. A German musician, died December 29, 1909. He was born at Malchow, in the Grand Duchy of Mecklenburg-Schwerin, in 1826. He began the study of music in his 12th year, and afterwards pursued his studies in Hanover and Berlin. In 1848 he joined a band of young musicians and came to the United States, giving concerts under the title of the Germania Musical Society. The tour was a great success, and when the Germania Society disbanded, Zerrahn was chosen to succeed Carl Bergmann as conductor of the Handel and Haydn Society, of Boston. He was for 42 years the conductor of this Society, a record unparalleled in musical history. He retired in 1898 and returned to Germany, where he lived until a few years previous to his death, when he again came to the United States. Aside from his long association with the Handel and Haydn Society as conductor, his professional life included an active participation in the organization and direction of the great musical jubilees of 1869 and 1872, the direction of the old Orchestral Union concerts, those of the Harvard Musical Association, and the Philharmonic Orchestra; for many years those of the Orpheus Musical Society, for 30 years the annual Worcester Musical Festival, and the concerts of the Salem Oratorio Society, as well as the direction for many years of the choral societies and festivals in cities in New Hampshire, Vermont, Massachusetts and New York.

ZINC. The year 1908 was unfavorable in the zinc smelting industry. It began with low prices and probably the largest stocks in the history of the industry. Conditions improved during the first quarter, but by the middle of the year was back to the point at the beginning. The latter half of the year was marked by a gradual improvement. The average number of

retorts in operation was estimated at 56,500, or 60 per cent. of the total, 193,958. Spelter stocks were reduced during the year by about 35 per cent. Owing to the reduced output in 1908, the United States lost first place in the world's production, and Germany, with the combined product of Silesia, in the Rhine district, again taking first position. The zinc mining industry reflected the condition prevailing in the smelting industry. At the close of the year there were unsold in the ore bins of the Joplin region over 6000 tons of blonde concentrates. Many of the large mines in this district, which were closed in the latter part of 1907, remained closed during 1908.

The total production of spelter in the United States in 1908 was 210,424 short tons. Of this, 190,749 was from domestic ore and 19,675 from foreign ore. Missouri was the first of the States in point of production 123,655 short tons being mined. This is 64.83 per cent. of the total production in the United States. Colorado occupies second place and Wisconsin third. The world's production of spelter in 1908 declined, 17,010 tons, or 2.1 per cent. of the production in 1907. The greatest falling off, as indicated above, was in the United States. Other countries which had a decreased production were England and Poland, but this decrease was made up by Belgium, with a total gain of 11,544 tons. The production in Germany also increased. The total production in 1908 was 796,832 short tons, as compared with 813,842 in 1907. The United States imported zinc in 1908 to the value of \$90,389.

The world's production of zinc in 1909 was estimated at the close of the year at 773,870 long tons, as estimated by the *Engineering and Mining Journal*. Of this the United States was credited with 238,455 tons, an increase according to this authority of 50,499 tons over the product of 1908. The European countries except Austria, increased their production, but the gains were small in most cases, only Great Britain and Holland having any considerable changes.

ZOOLOGICAL SOCIETIES. The Deutsche Zoölogischen Gesellschaft met at Frankfort a.M. June 1 to 3. A noteworthy feature of the meeting was an address by Professor A. Lang, the president of the Zoölogy section of the American Association for the Advancement of Science, which met in Boston, in December, was Professor C. J. Herrick, who delivered an address on "The Evolution of Intelligence and its Organs." Since the American Society of Zoölogists, under the presidency of Professor H. S. Jennings, met at the same time, no technical papers were read before the above section. In connection with the above, the American Society of Naturalists, held a special meeting at which papers relating to various phases of evolutionary research were read. The president's address, given by Professor T. H. Morgan, was on "Chance or Purpose in the Evolution of Organisms."

ZOÖLOGY. Zoölogical research of the present day, aside from the historically older descriptive anatomy and embryology, the results of which fill a large part of the literature, has been to a large extent conducted along experimental lines. This experimentation may be studies of the phenomena of regeneration, i. e.,

problems are very technical, and the results difficult to summarize in any popular fashion. A possibility of important practical results following from regeneration has been pointed out by Stockard, who has written extensively on this subject, and who thinks he can see an analogy between the behavior of regenerating tissue and that of morbid growths, such as cancer. In view of the very great importance which the study of cancer has at the present time, it is to be hoped that further research will confirm the accuracy of this suggestion.

Siedlecki has studied the habits and embryology of the Javanese flying frogs, *Polypedates reinwardtii* and *P. leucomystax*. The latter is more abundant, but the former was easier to catch, and most of his observations were on it. The sexes are colored much alike, but the female is larger than the male. The immature female can be distinguished from the male by the larger size of the eyes in the male, and the absolutely as well as relatively greater length of the vocal chords. The animal adheres very closely to trees, glass of an aquarium, etc., using as adhesive organs, not only the pads on the toes, but the skin of the ventral surface of body, a preanal skin fold, and a portion of the chin. When seen from below, as through the glass to which it is adhering, the whole body looks like an oval sucker. The attachment may be so close that it is retained after death.

The muscles of the legs are very strong, so that the animal is a good swimmer and jumper. In jumping down from a high place, it uses the webs on its feet as parachutes, and can jump from considerable heights without injury. This is useful in enabling it to escape birds and tree snakes. The breeding season is apparently mainly in March. Copulation is at night, the eggs being laid early in the morning. About 60 to 90 are laid, enveloped in slime, and deposited in a rolled up leaf, where the young undergo their development. The outer portion of the slime hardens, while the liquid in it collects in the centre, and in this the tadpoles live for a time after hatching. Later they drop to the ground, where if they happen to drop into a pool, they develop farther. They are not necessarily killed if they happen to drop on dry ground, for tropical showers may wash them into pools.

Goodrich returns to the discussion of the structure of the *Amphioxus nephridium*. In previous papers he had maintained that this has no internal opening, but these results were disputed by Boveri, who described such openings as present. Goodrich thinks this a mistake because, 1—in thin sections a definite partition wall can always be demonstrated across the inner end of nephridium; 2—the living nephridium has been seen to contain a liquid under such pressure that the end bulged, which it would not do if there were an opening in it,

series of papers in the *Quarterly Journal of Microscopical Science*, dealing with the anatomy and reproduction of these organisms.

Steche has published in *Zeitschrift f. Wissenschaftliche Zoologie*, a study of the light producing organs of *Anomalops katoptron* and *Photoblepharon palpebratus*, two fish from the Malay Archipelago, and concludes that light organs in fishes are of two sorts: 1, Acinose glands, at first open, but which with further specialization lose their ducts, and are changed into rounded sacs. These lie on the head or on body appendages, so that their light illuminates the field of vision of the fish. They are plentifully supplied with blood and nerves, and are larger than those of the second class. 2, a group composed of gland like cells, but not grouped into glands, and are sparingly provided with blood and nerves, and it is not clear whether they are derived from glands or from sense cells. They lie in the cutis along the back. Light produced by the first group is an extracellular product, constant and intense, and not affected by stimulation. That of the second group is called out by stimulation, never appearing spontaneously, and when it appears, increases gradually to a maximum. The organs found in the above fishes belong to the first group. They are absolutely as well as relatively the largest light producing organs found in fishes, which is the more surprising since these are not deep sea forms.

Miller has made an ecological study of the common toad. From experiments he concludes that in hibernating, they go down below the freezing line if possible, and if prevented from going as deep as this, are killed by the cold. If kept through the Winter in a warm room, they do not have a period of lethargy. While very voracious, the digestive power of the animal is slow, so that it can digest only one meal a day, and usually feeds less frequently than this. As an insect eater, the economic importance of the toad is considerable, though since it eats both beneficial and injurious insects, an exact estimate is difficult to make. For the market gardener, the value would be more than for the ordinary farmer, a conservative estimate of the value to the former being \$5.00 a year for each toad.

Jacobs, in opposition to Whitney, finds that rotifers are able to withstand drying, and will revive after long desiccation.

Mast, from a study of the reactions of Didinium, a ciliate infusorian, concludes that the trichocysts are not organs of offense, but are used solely for defensive purposes. G. R. Warriner has reinvestigated the question as to whether the New Zealand Kea actually kills sheep, and finds evidence that it does. It attacks the kidney, more because that is the easiest region in which to get a foothold, than because of any especial fondness for this organ.

THE END
